List of Acronyms

ACM	Assessment of Corrective Measures
AECOM	AECOM Technical Services, Inc.
annual report	annual groundwater monitoring and corrective action report
ASD	alternative source demonstration
Basin	Basin Electric Power Cooperative
bgs	below ground surface
CCR	coal combustion residuals
CFR	Code of Federal Regulations
ft	feet
ft/day	feet per day
GWPS	groundwater protection standard
LRS	Laramie River Station
mg/L	milligrams per liter
SSI	statistically significant increase
SSL	statistically significant levels
TDS	total dissolved solids
UPL	upper prediction limit
95% LCL	95 percent lower confidence limit

Executive Summary

This report summarizes groundwater monitoring and corrective action activities completed between January 1 and December 31, 2023 for the coal combustion residuals (CCR) units at the Basin Electric Power Cooperative (Basin) Laramie River Station (LRS) as required by 40 Code of Federal Regulations (CFR) § 257.90€ of the U.S. Environmental Protection Agency CCR rule. The CCR units subject to the rule include:

- Bottom Ash Pond 1,
- Bottom Ash Pond 2/Bottom Ash Pond 3/Ash Landfill Multi-unit, and
- Emergency Holding Ponds Multi-unit.

Site figures illustrating the location of the CCR units and program monitoring networks for the CCR units are presented as **Figures 1** and **2**, respectively. No program monitoring wells were modified or abandoned during the reporting period.

Basin implemented an Assessment monitoring program for Bottom Ash Pond 1 and the two CCR multi-units (Bottom Ash Pond 2/Bottom Ash Pond 3/Ash Landfill and Emergency Holding Ponds) in the spring of 2018 in response to the identification of statistically significant increases (SSIs) of Appendix III constituents in downgradient monitoring wells. Assessment monitoring was in place for all three units/multi-units at the start and end of the current annual reporting period (2023).

Assessment monitoring of the Bottom Ash Pond 2/Bottom Ash Pond 3/Ash Landfill Multi-unit in 2023 found that concentrations of two Appendix III constituents (calcium and chloride) and six Appendix IV constituents (barium, chromium, cobalt, lead, molybdenum, and selenium) exhibited SSIs above background values at select monitoring wells. No SSIs identified at the Bottom Ash Pond 2/Bottom Ash Pond 3/Ash Landfill Multi-unit exceeded GWPSs.

Assessment monitoring of the Emergency Holding Ponds Multi-unit in 2023 found that concentrations of one Appendix III constituent (fluoride) and three Appendix IV constituents (barium, chromium, and radium-226/228 combined) exhibited SSIs above the background values at select monitoring wells. No SSIs identified at the Emergency Holding Ponds Multi-unit exceeded GWPSs.

Assessment monitoring of the Bottom Ash Pond 1 Unit found that concentrations of five Appendix III constituents (boron, calcium, chloride, sulfate, and total dissolved solids [TDS]) and four Appendix IV constituents (chromium, lithium, molybdenum, and selenium) exhibited SSIs above background levels at select monitoring wells. Lithium at monitoring well MW-38B and molybdenum at monitoring wells 21B and MW-38B additionally exceeded GWPSs. Downgradient well(s) with a constituent or constituents reported above GWPSs at a statistically significant level (SSL) are as follows:

Appendix IV Constituent	Unit/Multi-Unit	Downgradient Well(s) GWPS SSL Exceedance
Lithium and molybdenum	Bottom Ash Pond 1	MW-38B

As required by the CCR rule, an assessment of corrective measures (ACM) was conducted and a public meeting open to interested and affected parties was held on January 30, 2020 to discuss the results of the ACM. After completion of the ACM, work was initiated on the Selection of Remedy for the impacted groundwater as required by 40 CFR § 257.97. A Groundwater Remedy Selection Report was prepared and issued in July 2020 (AECOM 2020), after which work was initiated on the design and implementation of the following selected remedy:

- Bottom Ash Pond 1 retrofit, hydraulic capture of impacted groundwater, and treatment of the captured groundwater in the new zero-discharge Pond 1.

Cleanout and retrofit of Bottom Ash Pond 1, which essentially eliminated the source of impact to groundwater, was completed in March 2021. Installation and hydraulic testing of extraction wells for the hydraulic capture system was

completed in December 2021. The hydraulic capture pumping system was designed in 2022 and contracting for installation of the system was initiated in 2022. Installation of the pumping system began in summer 2023 and initiation of pumping is expected in spring 2024 once final system components are installed in early 2024.

Other activities and conditions for the 2023 annual reporting period include:

- Semiannual Assessment-mode groundwater monitoring events were conducted in June and October. Monitoring involved sampling of background monitoring wells and downgradient monitoring wells.
- No decommissioning of the existing program monitoring networks was conducted.
- No program transitions (Detection to Assessment or vice versa) were triggered.

Anticipated activities for the next annual reporting period include:

- Completion of two semi-annual Assessment-mode groundwater monitoring events.
- Statistical evaluation of groundwater data for Appendix III and Appendix IV constituents.
- Initiation of groundwater withdrawal for the Bottom Ash Pond 1 Unit treatment system.
- Replacement of monitoring well MW-53B.

1 Introduction

On behalf of Basin Electric Power Cooperative (Basin), AECOM Technical Services, Inc. (AECOM) has prepared this 2023 annual report documenting groundwater monitoring and corrective action for the coal combustion residuals (CCR) units at Basin's Laramie River Station (LRS).

Section 1 provides background information on the LRS power generating facility, its CCR unit(s) and their physical setting, including geology, hydrology, and groundwater conditions. Section 2 summarizes CCR groundwater monitoring activities conducted prior to 2023. Section 3 summarizes the groundwater monitoring and corrective action activities completed in 2023, and references attachments to this report that contain detailed documentation of those activities. Section 4 provides some general information regarding the LRS CCR program and actions planned for 2024. Section 5 presents a summary and conclusions from CCR groundwater monitoring in 2023 and statistical analysis of the results. Section 6 lists references cited in this report.

1.1 Regulatory Background

The CCR rule (Chapter 40 of the Code of Federal Regulations [CFR] Part 257 Subpart D) became effective on October 19, 2015 and established standards for the disposal of CCR in landfills and surface impoundments (CCR units). In particular, the rule set forth groundwater monitoring and corrective action requirements for CCR units. The rule includes the requirement for an "annual groundwater monitoring and corrective action report" (annual report), with the annual report for 2023 due by January 31, 2024. The annual report is intended to document the status of the groundwater monitoring and corrective action program for each CCR unit, summarize key actions completed in the previous year, and project key activities for the upcoming year. This report is the seventh annual report for LRS and reports on activities performed and data gathered in calendar year 2023.

1.2 Facility Location and Operational History

LRS, located east of Wheatland, Wyoming (**Figure 1**), is one of the largest consumer-operated, regional, joint power supply ventures in the United States. The plant consists of three power-generating units with a total power output capacity of 1,710 megawatts:

- Unit 1, with a rating of 570 megawatts, which began operating in 1980;
- Unit 2, with a rating of 570 net megawatts, which began operating in 1981; and
- Unit 3, with a rating of 570 net megawatts, which began operating in 1982.

CCR produced at LRS includes fly ash, bottom ash, and flue gas desulfurization waste.

1.3 CCR Unit Description

CCR is disposed at LRS in the following CCR units, monitored as individual units or multi-units:

- Bottom Ash Pond 1;
- Bottom Ash Pond 2, Bottom Ash Pond 3, Ash Landfill (multi-unit); and
- Emergency Holding Ponds (multi-unit).

The Ash Landfill and three bottom ash ponds are located near the western edge of the site, west of the LRS generating units and office complex (**Figure 1**). The two emergency holding ponds are located north of the generating units in the northeastern part of the site. The landfill and ash ponds were permitted in 1978 and began receiving coal ash in 1980. The emergency holding ponds were identified as CCR units due to periodic disposal of flue gas desulfurization waste in the ponds.

1.4 Physical Setting

The geological and hydrogeological setting is important to understanding the groundwater environment in the vicinity of the LRS. The geologic history of Platte County, Wyoming is similar to most areas within the Front Range of the Rocky Mountains. Platte County is underlain by marine and continental deposits of limestone, conglomerate, sandstone, siltstone, shale, and unconsolidated sediments. Deposits range in thickness up to 10,000 feet (ft) in the east central and southeastern parts of the county. Precambrian rocks generally make up the mountainous areas, Paleozoic and Mesozoic rocks adjoin the older formations, and Tertiary and Quaternary period rocks underlie most of the county east of the Laramie Range (USGS 1960). The Laramide Orogeny was a period of mountain building active in the county approximately 70 million years ago marking the beginning of the Laramie Range and the Hartville Uplift, a structural divide separating the southern Powder River Basin from the northern Denver Basin. During the Cenozoic Era, streams eroded the eastern side of the range depositing silts, sands, and gravels of the Brule and Arikaree Formations that underlie the Wheatland area, including LRS.

Precipitation landing on the eastern flank of the Laramie Range supplies surface water to perennial and ephemeral streams that flow east towards the basin. Most surface water west of Wheatland eventually joins with the Laramie River, continuing east before discharging into the Platte River near Fort Laramie. Groundwater near Wheatland is recharged primarily through infiltration of rain and melt water on the eastern flank of the Laramie Range and through infiltration of irrigation water during the spring, summer, and fall months. Some groundwater in the saturated zones eventually returns to the land surface through seeps and springs, or is discharged by wells and evapotranspiration; however, the majority flows into surface streams. Alluvial drainages bounding the eastern (Wheatland Creek) and western portions (Chugwater Creek) of the facility generally transport surface water northward, discharging to the Laramie River (USGS 1960). Some groundwater within these regions percolates into the Arikaree Formation, which holds the uppermost aquifer beneath the LRS facility.

The LRS facility is underlain by a 5 to 30 ft thick section of Quaternary sediments that overlie the Arikaree Formation. The Arikaree Formation is comprised primarily of loosely to moderately cemented very fine to fine grained sandstone with interbedded silts and clays. A lower unit consists of lenses of loose to well-cemented red to gray coarse sandstone interbedded with lenses of well-cemented conglomerate. A basal conglomerate lies unconformably upon the underlying Brule Formation in many places throughout Platte County (USGS 1960). A review of the geologic logs generated during the drilling of the on-site water supply well (Forell-Baumgardner No. 2) suggests the Brule Formation is approximately 820 ft below ground surface (bgs) in the western portions of the facility. Based on this information, the local thickness of the Arikaree Formation on-site is approximately 790 ft thick.

The lithologic characteristics of the Arikaree Formation beneath the LRS are generally consistent, although there are slight differences in the degree of cementation and induration, and minor variations in grain size. Few fractures were noted in borehole soil cores obtained during monitoring well network installation. Interbeds with higher silt and clay content, coupled with greater cementation, generate thin discontinuous perched groundwater horizons that are interpreted to hold only seasonal groundwater. The perched groundwater would tend to percolate downward to what is interpreted as the uppermost aquifer based on data obtained during monitoring well installation and aquifer testing. The uppermost aquifer is present at a depth of approximately 95 ft bgs in the southwestern portion of the facility, and slopes generally north towards the Laramie River. The hydraulic gradient for the uppermost aquifer beneath the facility appears to be controlled dominantly through topographic features and enhanced infiltration zones in permeable shallow alluvium. A representative potentiometric surface map from the most recent Assessment monitoring event conducted in October 2023 is presented in Attachment A. Data from aquifer pump testing conducted at the facility in 2016 were used to estimate hydraulic conductivities, which range from 0.65 ft per day (ft/day) to 3.12 ft/day, with an average of 1.40 ft/day. Aquifer slug tests were also performed on eight other wells, with resulting hydraulic conductivities ranging from 0.45 ft/day to 6.28 ft/day, with an average of 2.16 ft/day.

2 CCR Groundwater Monitoring Activities Prior to 2023

The regulatory process for CCR groundwater monitoring and corrective action is established by 40 CFR §§ 257.90 through 257.98. The process includes a phased approach to groundwater monitoring, leading (if applicable) to the establishment of groundwater protection standards (GWPSs) for each CCR unit. Exceedances of the GWPSs that are determined to be statistically significant can trigger requirements for additional groundwater characterization and corrective action assessment followed by corrective action implementation.

The following paragraphs provide a summary of CCR groundwater monitoring activities performed prior to 2023. CCR groundwater monitoring activities performed in 2023 are discussed in Section 3.

Groundwater monitoring at LRS is performed using a network of monitoring wells that includes wells to monitor background water quality that is not potentially influenced by the presence of the CCR unit, and wells placed at the downgradient boundary of the CCR units (**Figure 2**). The hydro stratigraphic positions of the CCR monitoring wells selected for sampling background and downgradient groundwater quality for each LRS CCR unit or multi-unit prior to 2023 are summarized below:

CCR Unit/multi-Unit	Background Wells	Downgradient Wells
Bottom Ash Pond 1	MW-52B, MW-53B	MW-49B, MW-21B, MW-38B, MW-38C
Bottom Ash Pond 2, Bottom Ash Pond 3, Ash Landfill	MW-39B, MW-32B	MW-36B, MW-37B, MW-20B, MW-14BR, MW-40B, MW-52B, MW-53B
Emergency Holding Ponds	MW-41B, MW-42B, MW-43B	MW-44B, MW-45B, MW-46B, MW-47B

The following monitoring wells were also included in the CCR monitoring network for the purpose of measuring groundwater elevations and evaluating groundwater flow direction and velocity in the vicinity of the bottom ash ponds and landfill: MW-33B, MW-34B, MW-35B, MW-48B, MW-50B, MW-51B, MW-54B, MW-55B, and MW-56B.

2.1 Baseline Detection Monitoring (2016-17)

Detection monitoring was initiated in August 2016, which involved sampling groundwater for Part 257 Appendix III and Appendix IV constituents over eight baseline Detection monitoring events.

Baseline Detection monitoring events were performed in general accordance with procedures established in the site-specific Sampling and Analysis Plan (AECOM 2018a), which is included in the facility's Operating Record. The Sampling and Analysis Plan describes the procedures for equipment calibration, monitoring well water level measurement, monitoring well purging and sampling, sample custody, sample shipping, laboratory analysis, and documentation requirements for each groundwater sample submitted. The results of detection monitoring at LRS were presented and discussed in the First Annual Groundwater Monitoring and Corrective Action Report, 2016-2017 (AECOM 2018b).

2.2 Initial Assessment Monitoring (2018)

If an SSI of any Appendix III constituent relative to background conditions was detected in the downgradient monitoring wells and could not be demonstrated to be associated with a source other than the CCR unit, then the CCR rule required that groundwater monitoring transition from the Detection monitoring phase to the Assessment monitoring phase. The results of the Baseline Detection monitoring (2016–2017) identified the following Appendix III SSIs:

- Bottom Ash Pond 1 SSIs – boron, calcium, chloride, sulfate, and TDS;

- Bottom Ash Pond 2, Bottom Ash Pond 3, Ash Landfill SSIs – fluoride and chloride; and
- Emergency Holding Ponds SSI – fluoride.

In response to SSIs identified during Detection monitoring, Basin implemented an Assessment monitoring program for the two CCR multi-units (Bottom Ash Pond 2, Bottom Ash Pond 3, Ash Landfill and Emergency Holding Ponds) in the spring of 2018. The initial Assessment monitoring event for the two multi-units was conducted in April 2018 and included analysis of groundwater samples for constituents listed in Part 257 Appendix IV. Also in the spring of 2018, Basin elected to conduct an alternative source demonstration (ASD) investigation to evaluate whether an alternative source could explain the SSIs identified for Bottom Ash Pond 1 during Detection monitoring. This ASD investigation involved the following activities:

- Analyzing soil samples collected from shallow soil borings at 10 locations near Bottom Ash Pond 1, and
- Performing groundwater modeling to evaluate potential constituent migration pathways and transport times from potential source areas to one of the downgradient wells for Bottom Ash Pond 1.

The ASD investigation could not confirm an alternative source; therefore, Basin initiated an Assessment monitoring program for Bottom Ash Pond 1 and completed the initial Assessment monitoring event in June 2018 which included analysis of groundwater samples for constituents listed in Part 257 Appendix IV.

The following Appendix IV constituents were detected during the initial Assessment monitoring of the CCR multi-units: barium, chromium, fluoride, lithium, molybdenum, radium-226 and -228 (combined), and selenium (April 2018). The Appendix IV constituents detected during initial Assessment monitoring of Bottom Ash Pond 1 included barium, chromium, cobalt, fluoride, lithium, molybdenum, and selenium (June 2018).

Because one or more Appendix IV constituents were detected during the initial Assessment monitoring events for all three CCR units/multi-units at LRS, the CCR rule required that a second verification Assessment monitoring event be performed for each unit/multi-unit. Verification Assessment monitoring was performed in June 2018 for the two multi-units and in October 2018 for Bottom Ash Pond 1. Verification monitoring for each unit/multi-unit involved analysis for Appendix III constituents plus the Appendix IV constituents detected during initial Assessment monitoring.

The results of Assessment monitoring conducted in 2018 were presented in the 2018 Annual Groundwater Monitoring and Corrective Action Report (AECOM 2019a).

2.3 Additional Groundwater Characterization (2019)

The CCR rule requires that concentrations of Appendix III and Appendix IV constituents detected in downgradient wells during Assessment monitoring be compared to background concentrations using the statistical procedures in § 257.93(g). The rule also requires the establishment of GWPSs in accordance with § 257.95(h) for each Appendix IV constituent detected in downgradient wells during Assessment monitoring. If a GWPS is exceeded in one or more downgradient wells at statistically significant levels (SSLs), the rule requires additional groundwater characterization and an ACM unless the SSLs can be attributed to a source other than the CCR unit or to an error in sampling, statistical evaluation, or natural variation in groundwater quality.

Assessment monitoring of Bottom Ash Pond 1 found that lithium and molybdenum concentrations in monitoring well MW-38B exceeded GWPSs at SSLs. Although selenium concentrations in monitoring wells MW-21B and MW-38B exceeded the GWPS by direct comparison, their 95 percent lower confidence limit (95% LCL) did not exceed the GWPS. Basin concluded the available data indicated that the SSLs associated with Bottom Ash Pond 1 could not be attributed to a source other than the CCR unit or to errors in sampling, statistical evaluation, or natural variation in groundwater quality. Therefore, Basin performed additional groundwater characterization and an ACM for Bottom Ash Pond 1. Additional groundwater characterization activities were performed in the spring of 2019 to evaluate the nature and extent of groundwater impacted by a release of CCR from Bottom Ash Pond 1 that has resulted in the exceedance

of GWPSs for lithium and molybdenum. The characterization activities were designed to also support selection and implementation of a remedy to attain GWPSs. The activities involved installation and sampling of four monitoring wells (MW-38C, MW-54B, MW-55B, MW-56B) downgradient of Bottom Ash Pond 1 at the locations illustrated in **Figure 2**:

- MW-38C was installed near MW-38B to evaluate the vertical extent of groundwater impacts near MW-38B. The total depth of MW-38C was 130 ft bgs.
- MW-54B was installed to evaluate groundwater quality of the uppermost aquifer at the facility boundary. The total depth of MW-54B was 25 ft bgs.
- MW-55B was installed northeast of MW-21B to evaluate the downgradient extent of groundwater impacts north of MW-38B. The total depth of MW-55B was 70 ft bgs.
- MW-56B was installed east of MW-21B to evaluate the lateral extent of groundwater impacts northeast of MW-38B. The total depth of MW-56B was 79 ft bgs.

Groundwater samples from the four wells were analyzed for Appendix III parameters and the following Appendix IV parameters: barium, chromium, cobalt, fluoride, lithium, molybdenum, and selenium; and the geochemical parameters alkalinity, magnesium, and sodium. None of the 2019 results exceeded the GWPSs for lithium, molybdenum, or the other Appendix IV constituents detected during Assessment monitoring in 2018. These results, combined with results from past Assessment monitoring, reasonably defined the extent of groundwater impacted by lithium and molybdenum attributed to Bottom Ash Pond 1. The data suggest that the horizontal extent of groundwater with lithium and molybdenum concentrations exceeding GWPSs extends from Bottom Ash Pond 1 downgradient to MW-38B but not as far as MW-55B or MW-56B. Similarly, the vertical extent of groundwater exceeding GWPSs extends from the surface of the uppermost aquifer at MW-38B to possibly below the bottom of the screened interval of MW-38B (75 ft bgs), but not as deep as the screened interval of MW-38C (114 ft bgs to 125 ft bgs). Overall, the data enhanced understanding of relevant site conditions, assisted in selecting a remedy, and will be useful for remedy design and implementation.

2.4 Assessment of Corrective Measures (ACM) (2019-2020)

Groundwater Assessment monitoring of Bottom Ash Pond 1 identified lithium and molybdenum at SSLs above GWPSs. The exceedance of GWPSs triggered requirements for the assessment, selection, and implementation of corrective measures to prevent further releases of hazardous constituents, remediate any releases, and restore the affected area. Basin completed an ACM in 2019 (AECOM 2019b). The ACM focused on identifying and evaluating groundwater corrective measures to address the dissolved lithium and molybdenum in groundwater downgradient of Bottom Ash Pond 1.

Potentially applicable corrective measures were identified based on the nature and extent of groundwater impacts and site-specific geological and hydrogeological characteristics. Screening was performed by evaluating each corrective measure against the criteria of effectiveness, technical implementability, and relative cost. Those that were deemed ineffective and/or had significant implementation concerns were rejected from further consideration. Natural attenuation, groundwater extraction, and long-term monitoring passed the screening step and were assembled into the following two corrective measures alternatives for further detailed evaluation:

- Alternative A: Natural Attenuation and Long-Term Monitoring; and
- Alternative B: Groundwater Extraction, On-site Reuse or Disposal, and Long-Term Monitoring.

The two alternatives were evaluated against the requirements specified in 40 §§ CFR 257.96 and 257.97, broadly categorized under the criterion of effectiveness, implementability, and cost. The results of the ACMs, including an evaluation of the two alternatives, are presented in the ACMs (AECOM 2019b). The two alternatives were presented at a public meeting held on January 30, 2020 in Wheatland, Wyoming. A 30-day public comment period started on January 30, 2020 and ended on February 29, 2020. No comments were received during the 30-day period following the public meeting.

2.5 Selection of Remedy and Remedy Implementation (2020-2021)

Following the ACM public meeting, Basin elected to implement Alternative B: Retrofit of Bottom Ash Pond 1, Groundwater Extraction, On-site Reuse or Disposal, and Long-Term Monitoring to meet the remedy requirements of the CCR rule. The Groundwater Remedy Selection Report was certified and issued in July 2020 (AECOM 2020). Basin subsequently initiated remedial design activities within 90 days of remedy selection in accordance with § 257.97.

- The first step in the selected alternative involves the removal of all CCR from Bottom Ash Pond 1 and the placement of a liner system before returning it to service as a CCR unit. The retrofit was initiated in August 2020 and completed in March 2021.
- The second step involves the use of proven, reliable groundwater pumping technology to intercept impacted groundwater and route it back to the retrofitted Bottom Ash Pond 1. Design of this step was initiated in November 2020 and was completed in spring 2022. The following steps were completed in 2021:
  - Installation of two 6-inch recovery wells to a total depth of approximately 80 ft bgs occurred in November 2021.
  - Recovery well development and aquifer testing of the recovery wells occurred in December 2021.

2.6 Semi-annual Assessment Monitoring (2019-2022)

Assessment monitoring in 2018 of the Bottom Ash Pond 2, Bottom Ash Pond 3, and the Ash Landfill multi-unit found that concentrations of Appendix IV constituents chromium, fluoride, and selenium exhibited SSIs above background values, but all concentrations were below GWPSs. Therefore, Assessment monitoring of this multi-unit is required on a semi-annual basis per the requirements of § 257.95. Assessment monitoring of the Emergency Holding Ponds multi-unit found that Appendix IV constituents chromium, fluoride, and selenium exhibited SSIs above background values but below GWPSs. Therefore, semi-annual Assessment monitoring of this multi-unit is also required. The results of semi-annual Assessment monitoring subsequently completed in 2023 are discussed in section 3.

The first of two semi-annual Assessment monitoring events for 2019 occurred on June 4-6, 2019. The field activities and resulting data were summarized in the Sampling and Analysis Report, Assessment Monitoring, June 2019 (AECOM 2019c). The second semi-annual Assessment monitoring event for 2019 occurred on October 21-23, 2019. The field activities and data were summarized in the Sampling and Analysis Report, Assessment Monitoring, October 2019 (AECOM 2019d).

Semi-annual Assessment monitoring events for 2020, 2021, and 2022 occurred in June and October of each year. The field activities and resulting data were summarized in the 2020 Annual Groundwater Monitoring and Corrective Action Report, the 2021 Annual Groundwater Monitoring Corrective Action Report, and the 2022 Annual Groundwater Monitoring Corrective Action Report (AECOM 2021, 2022, 2022).

3 CCR Groundwater Monitoring and Corrective Action Activities in 2023

This section summarizes the activities conducted at LRS in 2023 to comply with the groundwater requirements of the CCR rule:

- Groundwater Assessment monitoring activities for all CCR units:
  - monitoring system evaluation;
  - groundwater sampling;
  - laboratory analysis; and
  - statistical analysis of the monitoring results.
- Groundwater Corrective Action
  - A Groundwater Extraction System was designed for Bottom Ash Pond 1 and partially installed in 2023. Final installation is expected to be completed in early 2024 and operation is anticipated to be initiated in spring 2024.

Further details concerning each of these activities, including brief discussion of work completed during the reporting period are provided below.

3.1 Assessment Monitoring Activities

3.1.1 Monitoring System Evaluation

As described in the CCR Groundwater Monitoring System Report (AECOM 2017), monitoring wells were installed around the CCR unit/multi-units at LRS to: (1) facilitate collection of representative groundwater samples from the uppermost aquifer; and (2) accurately measure water table elevations to support evaluation of groundwater gradient and flow direction**.** All monitoring wells comprising the LRS CCR monitoring system with the exception of well MW-53B were found to be in good condition during the assessment monitoring events conducted in 2023. The condition of well MW-53B is described more in Section 4.

Following additional groundwater characterization of Bottom Ash Pond 1 in the spring of 2019, Basin elected to incorporate the four newly installed monitoring wells (MW-38C, MW-54B, MW-55B, and MW-56B) into the assessment monitoring program, which continued into 2023. Water level measurements and groundwater quality samples were collected from MW-38C during the June and October 2023 Assessment monitoring events. Water level measurements only were taken at MW-54B, MW-55B and MW-56B in 2023.

Potentiometric surface maps constructed using the depth-to-groundwater measurements obtained at the beginning of each event are presented in **Attachment A**. The direction of groundwater flow in both 2023 events is generally to the northeast, consistent with previous data collected during detection and assessment monitoring from 2016 through 2022 and supports the design of the well network (**Figure 2**) to monitor background groundwater quality and the quality of groundwater downgradient of the CCR units.

3.1.2 Groundwater Sampling and Analysis

Groundwater Assessment monitoring was performed at LRS in June and October 2023 for the three CCR unit/multi-units. Monitoring activities included collecting groundwater samples from the wells listed below:

CCR Unit/multi-unit	Background Wells	Downgradient Wells
Bottom Ash Pond 1	MW-52B, MW-53B	MW-21B, MW-38B, MW-38C*, MW-49B
Bottom Ash Pond 2, Bottom Ash Pond 3, Ash Landfill (multi-unit)	MW-39B, MW-32B	MW-36B, MW-37B, MW-20B, MW-14BR, MW-40B, MW-52B, MW-53B
Emergency Holding Ponds (multi-unit)	MW-41B, MW-42B, MW-43B	MW-44B, MW-45B, MW-46B, MW-47B

* MW-38C, installed in April 2019, was added to the assessment monitoring program as a downgradient compliance well for Bottom Ash Pond 1. This well was sampled during the June and October 2023 monitoring event.

Water levels were also measured in the following monitoring wells for the purpose of evaluating groundwater flow direction and velocity:

- MW-33B, MW-34B, MW-35B, MW-48B, MW-50B, MW-51B, MW-54B, MW-55B, and MW-56B[1]. Monitoring wells MW-22B and MW-23B were not measured for water levels in 2023 due to damage to the well and to the lock, respectively. No well repair is planned for MW-23B; this well has been removed from the water level monitoring network. Additionally, monitoring wells MW-52B, MW-54B, MW-55B, and MW-56B were not measured for water levels during the June 2023 event but were measured during the October 2023 event. MW-52B was not able to be located under new road base material in the area. The other wells were inadvertently missed during fluid level measurements.

Assessment monitoring sampling and analysis was performed in general accordance with procedures established in the Sampling and Analysis Plan (AECOM 2018a). The results are presented in **Attachment A**, which also includes representative potentiometric surface maps for the uppermost aquifer, inferred groundwater flow directions and estimated velocities, and a tabulated summary of field measurements and laboratory analytical data.

3.2 Statistical Procedures and Analysis

The CCR rule requires that concentrations of Appendix III and Appendix IV constituents detected in downgradient wells during Assessment monitoring be compared to background concentrations using the statistical procedures in § 257.93(g). The rule also requires the establishment of GWPSs for each Appendix IV constituent detected in downgradient wells during Assessment monitoring. The detected concentrations are then compared to the GWPSs for each constituent, which are either:

- The federal Safe Drinking Water Act maximum contaminant level,
- Concentrations for cobalt, lead, lithium, and molybdenum specified in § 257.95(h)(2), or
- The background concentration (upper prediction limit [UPL]) if it is higher than the maximum contaminant level or concentration specified in § 257.95(h)(2).

The statistical analysis procedures and results from 2023 Assessment monitoring for each LRS CCR unit/multi-unit are discussed below. Input and output data files for calculating the UPLs and lower prediction limits for the LRS multi-units are provided in **Attachment B.**

[1] MW-52B, MW-54B, MW-55B, and MW-56B were only gauged during the second monitoring event in October and are not included in the first half potentiometric map in June.

3.3 Bottom Ash Pond 1

Appendix III and Appendix IV groundwater quality data from Bottom Ash Pond 1 Assessment monitoring were evaluated using an interwell approach that statistically compared constituent concentrations at downgradient monitoring wells to those present at background monitoring wells. The statistical analyses were performed in accordance with the Statistical Method Certification and Statistical Methodology presented in the CCR Groundwater Monitoring System Report (AECOM 2017).

Prediction limits (i.e., parametric or nonparametric) were developed for each constituent based on the frequency of non-detect values and whether the background data for that constituent exhibited a normal, lognormal, or nonparametric distribution. For the statistical analysis, non-detect values were represented as one-half the detection

limit. No outliers were identified in the background data. Analytical data from the background monitoring wells were used to develop an UPL for the Appendix III and Appendix IV background data at 95% confidence or better. Data from each downgradient compliance monitoring well were compared to the UPL to identify SSIs over background. Mann-Kendall trend analysis was used to identify trends for constituents with SSIs. Constituents exhibiting an SSI over the background UPL were further evaluated to determine whether they are present at SSLs relative to GWPS established under § 257.95(d)(2). SSLs were identified by calculating the 95% LCL for the constituents exhibiting SSIs over background at the downgradient compliance wells at each CCR unit and comparing the 95% LCL to the established GWPS. A constituent is present at an SSL above the GWPS if the 95% LCL is greater than the GWPS.

Table 1 summarizes the statistically determined background UPLs of each Appendix III and Appendix IV constituent for Bottom Ash Pond 1. Table 1 also identifies applicable Appendix IV GWPSs, whether each Appendix IV constituent concentration measured in the downgradient wells exceeds the GWPS by direct comparison, and if constituent concentrations are present at an SSL above the GWPS. Assessment monitoring of Bottom Ash Pond 1 in 2023 found that lithium and molybdenum at monitoring well MW-38B exceeded their respective GWPSs at an SSL. Appendix IV SSIs were also observed in MW-21B for chromium, molybdenum, and selenium, and in monitoring well MW-38B for chromium; in these instances, the SSIs did not exceed the GWPS at an SSL because the 95% LCL did not exceed the GWPS. Assessment monitoring of this CCR unit will continue on a semi-annual basis per the requirements of § 257.95.

3.4 Bottom Ash Pond 2, Bottom Ash Pond 3, Ash Landfill Multi-unit

Statistical analyses of Appendix III and Appendix IV groundwater quality data for the Bottom Ash Pond 2, Bottom Ash Pond 3, Ash Landfill multi-unit were performed in a manner similar to that described above for Bottom Ash Pond 1. **Table 2** summarizes the statistically determined background UPLs of each Appendix III and Appendix IV constituent for the Bottom Ash Pond 2, Bottom Ash Pond 3, Ash Landfill multi-unit. **Table 2** also identifies applicable Appendix IV GWPSs, whether each Appendix IV constituent concentration measured in the downgradient wells exceeds a GWPS by direct comparison, and if the constituent concentrations are present at an SSL above the GWPS. Assessment monitoring of this multi-unit in 2023 found that concentrations of some Appendix IV constituents (barium, chromium, cobalt, lead, molybdenum, and selenium) exhibited SSIs above background values at select monitoring wells, but each SSI concentration was below its respective GWPS. Assessment monitoring of this multi-unit will continue on a semi-annual basis per the requirements of § 257.95.

3.5 Emergency Holding Ponds

Statistical analyses of Appendix III and Appendix IV groundwater quality data for the Emergency Holding Ponds multi-unit were also performed consistent with the methodology described above for Bottom Ash Pond 1. **Table 3** summarizes the statistically determined background UPLs of each Appendix III and IV constituent for the Emergency Holding Ponds multi-unit. **Table 3** also identifies applicable Appendix IV GWPSs, whether each Appendix IV constituent concentration measured in the downgradient wells exceeds a GWPS by direct comparison, and if the constituent concentrations are present at an SSL above the GWPS. Assessment monitoring of the Emergency Holding Ponds multi-unit in 2023 found that concentrations of three Appendix IV constituents (barium, chromium, and radium-226/228 combined) exhibited one or more SSIs above the background value at select monitoring wells. No SSI concentrations

exceeded the respective GWPSs. Assessment monitoring of this multi-unit will continue on at least a semi-annual basis per the requirements of § 257.95.

3.6 Corrective Action Activities

3.6.1 Selection of Remedy for Bottom Ash Pond 1

After completion of the Bottom Ash Pond 1 excavation and retrofit and the installation of the groundwater interceptor system extraction wells in 2021, the design of the groundwater recovery pumping system was conducted. The design includes elements of pumping, piping, electrical service, and process controls. The design was completed in 2022 and the contracting for installation of these elements was initiated in 2022. The system was partially installed in 2023 but was not completed due to delays in procurement of system components. Final installation is expected to be completed in early 2024, and system start-up is anticipated for spring 2024.

4 General Information

The following subsections summarize any problems encountered in the LRS CCR program through 2023, resolutions to those problems (if needed), and upcoming actions planned for 2024.

4.1 Problems Encountered

Monitoring wells MW-50B, MW-51B, and MW-52B were not measured for water levels and MW-52B was not sampled for laboratory analysis during the June 2023 sampling event due to being inaccessible in newly installed road base associated with the Pond 3 retrofit project. These wells were uncovered in September 2023 and water levels were measured in October 2023. Monitoring well MW-52B was sampled during the October 2023 event. MW-53B was not sampled in June or October 2023. During the June sampling event, the pump would not bring water to the surface and appeared to be stuck in the well. During investigation of the well and pump in September 2023 using a downhole camera, it was discovered that the well screen interval of the well was completely silted in. It is assumed that screen failure caused the screen portion of the well to become silted in as there was no indication of infiltration of sediment from the surface due to placement of well caps. Monitoring well MW-53B is scheduled abandonment and for replacement during 2024.

4.2 Actions Planned for 2024

Basin plans to continue the Assessment monitoring program for the three CCR unit/multi-units at LRS in 2024. The Assessment monitoring program will include semi-annual groundwater sampling events and the required statistical evaluations. To maintain the robustness of the Assessment monitoring program, Basin plans to replace monitoring well MW-53B during the 2024 reporting period.

Basin also plans to complete the implementation of the remedy selected for Bottom Ash Pond 1. The Groundwater Extraction System was partially installed in 2023. Final installation is expected to be completed in early 2024, and system start-up is anticipated for spring 2024. The system was unable to be completed in 2023 due to supplier delays of system components outside of Basin control. Basin will prepare a semiannual report describing the progress in implementing the remedy as needed.

5 Summary and Conclusions

Two rounds of groundwater Assessment monitoring were performed at LRS in 2023. Statistical analysis of the results identified an SSI for at least one Appendix III constituent for each LRS CCR unit/multi-units. Therefore, Assessment monitoring will be performed on a semi-annual basis in 2024 for all LRS CCR unit/multi-units. Basin will also implement the selected remedy to address Appendix IV SSLs for lithium and molybdenum associated with Bottom Ash Pond 1 and continue to comply with CCR rule notification, reporting, and certification requirements.

1. Introduction

On behalf of Basin Electric Power Cooperative (Basin), AECOM Technical Services, Inc. (AECOM) prepared this Coal Combustion Residuals (CCR) Groundwater Sampling and Analysis Report for the Basin Laramie River Station (LRS).

This Sampling and Analysis Report was prepared to present the results of sampling and analysis of groundwater conducted per the monitoring requirements of the United States Environmental Protection Agency (USEPA) CCR rule (Chapter 40 of the Code of Federal Regulations [CFR], §§ 257.90 to 257.98).

The following three CCR unit/multi-units are present at LRS:

- Bottom Ash Pond 1;
- Bottom Ash Pond 2, Bottom Ash Pond 3, Ash Landfill (multi-unit); and
- Emergency Holding Ponds (multi-unit).

Semi-annual groundwater Assessment monitoring was performed at LRS in June and October 2023 for the three CCR unit/multi-units. Assessment monitoring involves groundwater level measurements, collection of groundwater samples from CCR monitoring wells, and analysis for Part 257 Appendix III and selected Appendix IV parameters.

2. Groundwater Flow

As required by 40 CFR § 257.93(c), groundwater elevations were measured in each well prior to purging each time groundwater was sampled. The groundwater measurements for the 2023 Assessment monitoring events, presented in **Table 1**, were used to create potentiometric surface maps for the uppermost aquifer for each monitoring event. The resulting potentiometric surface maps (contained in the operating record) were used to evaluate the direction of groundwater flow and hydraulic gradient for each subject CCR unit/multi-unit. **Figure 1** and **Figure 2** represent a potentiometric surface map, including inferred groundwater flow direction for each CCR unit/multiunit, constructed using measurements taken on June 7-9, 2023 and October 25, 2023, respectively. The potentiometric surface and inferred groundwater flow direction for the events completed in 2023 were generally consistent with previous events that have been conducted at LRS since monitoring began in 2016.

Groundwater flow velocities were calculated for each unit/multi-unit using measurements from the semi-annual assessment monitoring events in June and October 2023, as presented in **Appendix I** and summarized below:

	Calculated Seepage Velocities (feet/day)		
CCR Unit/multi-unit	Minimum	Maximum	Average
Bottom Ash Pond 1	0.027	0.46	0.11
Bottom Ash Pond 2, Bottom Ash Pond 3, Ash Landfill	0.013	2.6	0.18
Emergency Holding Ponds	0.05	3.7	0.44

Based on the groundwater flow conditions documented in this section, the relative function of the monitoring wells employed in the LRS CCR groundwater monitoring system is as follows:

CCR Unit/multi-unit	Background Wells	Downgradient Wells
Bottom Ash Pond 1	MW-52B, MW-53B	MW-49B, MW-21B, MW-38B, MW-38C*
Bottom Ash Pond 2, Bottom Ash Pond 3, Ash Landfill	MW-39B, MW-32B	MW-36B, MW-37B, MW-20B, MW-14BR, MW-40B, MW-52B, MW-53B
Emergency Holding Ponds	MW-41B, MW-42B, MW-43B	MW-44B, MW-45B, MW-46B, MW-47B

* MW-38C was added to the Bottom Ash Pond 1 monitoring program following its installation during groundwater characterization activities in the spring of 2019.

The following monitoring wells are also included in the LRS CCR monitoring system for the purpose of measuring groundwater elevations and evaluating groundwater flow direction and velocity in the vicinity of the bottom ash ponds and landfill: MW-33B, MW-34B, MW-35B, MW-48B, MW-50B, MW-51B, MW-54B, MW-55B, and MW-56B. These wells were added to the list following their installation during groundwater characterization activities conducted in the spring of 2019. Well MW-23B was removed from the monitoring well network after the well was found to be damaged in 2019 and it was determined the well was not needed to determine groundwater flow in the area. MW-22B could not be opened due to a damaged lock and therefore was not gauged during the 2023 reporting period. MW-54B, MW-55B, and MW-56B were inadvertently missed during water level measurements during the June 2023 event but were measured for water levels during the October 2023 event.

3. Groundwater Quality

The semiannual Assessment monitoring events in June and October 2023 included samples from each well in the CCR unit/multiunit program with the exception of monitoring well MW-52B (only sampled in October, but not in June) and monitoring well MW-53B (not sampled in either June or October). During the June event, well MW-52B was not able to be located due to the addition of road base material in the area. The well was able to be uncovered in September prior to the October sampling event. The MW-53B pump was found to be not operational during the June event. Upon further investigation in September 2023, it was discovered that the screen section of the well was silted in. MW-53B is scheduled for replacement in 2024.

The samples collected for each event were submitted under chain-of-custody to the Eurofins Denver Laboratory located in Arvada, Colorado for analysis of the analytes included CCR Rule Appendix III and Appendix IV. The laboratory reports issued by Eurofins for these events were reviewed against the chain-of-custody forms and for compliance with maximum holding times and conformance with project-required methods with copies included in the LRS operating record. The reported analytical results from Eurofins were reviewed and verified by an AECOM data validator/chemist using USEPA guidelines (USEPA 2020[1]). Data validation concluded that field and laboratory precision, field and laboratory accuracy, method compliance, and data set completeness were acceptable based on the data reported. While three data points were rejected, the percent completeness is greater than 99% and is therefore considered acceptable. Data validation reports were prepared for each monitoring event and are included in the operating record. The validated results for the June and October 2023 sampling events were compiled into summary form as presented in **Tables 2, 3**, and **4** with the results of quality assurance/quality control field blank samples presented in **Table 5**. Copies of the Eurofins analytical laboratory and data validation reports for the June and October 2023 events are included as **Appendix II**.

Appendix I

Groundwater Flow Calculations

Project:	**Laramie River Station**	CCR Unit:	**Emergency Holding Ponds**	Background Wells:	MW-41B, MW-42B, MW-43B
Calculations by:	Emily Conkling	Checked by:	Kara Hoppes	Downgradient Wells:	MW-44B, MW-45B, MW-46B, MW-47B
Date:	1/12/2024	Date:	1/16/2024		

Hydrualic Gradient (i, ft/ft)

Governing Equation:
(Hydraulic Gradient)

$$i = -dh/dl$$

where, i= hydraulic gradient
dh= change in hydraulic head between upgradient and downgradient locations
dl= horizontal distance between upgradient and downgradient locations, parallel to flow (perpendicular to potentiometric contours)

Calculation Table

Date	Vector	Upgradient WL elevation (ft MSL)	Downgradient WL Elevation (ft MSL)	dh (ft)	dl (ft)	i (ft/ft)	Average i (ft/ft)
June 7, 2023	Vector 1 (42B)	4470.33	4455	15.33	810	0.0189	0.0240
	Vector 2 (43B)	4476.92	4450	26.92	925	0.0291	
October 25, 2023	Vector 1 (42B)	4472.40	4455	17.40	770	0.0226	0.0203
	Vector 2 (45B)	4470	4454.01	15.99	885	0.0181	
						Minimum	**0.0203**
						Maximum	**0.0240**
						Average	**0.0222**

Hydraulic Conductivity (K, ft/d)

K from slug and pumping tests conducted at site		
Minimum	0.75	ft/day
Maximum	3.12	ft/day
Average (geomean)	1.31	ft/day

Specific Yield, Effective Porosity

Specific Yield, Effective Porosity	
Minimum	0.02
Maximum	0.3
Average	0.15

Note: Effective porosity/specific yield is based on literature values from Arikaree Formation literature and textbook values for sandstone

Seepage Velocity

$$v_s = -K * i / n_e$$

where, v_s= seepage velocity, feet per day (ft/d)
K= hydraulic conductivity, feet per day (ft/d)
i= hydraulic gradient, feet per foot (ft/ft)
n_e= effective porosity/specific yield, unitless

Calculated Seepage Velocities (ft/day)				
	K (ft/day)	i (ft/ft)	n_e	v_s (ft/day)
Minimum	0.75	0.0203	0.30	**0.05**
Maximum	3.12	0.0240	0.02	**3.7**
			Geometric Mean	**0.44**

Project:	**Laramie River Station**	CCR Unit:	**Bottom Ash Ponds 2&3 and Ash Landfill**	Background Wells:	MW-39B, MW-32B
Calculations by:	Emily Conkling	Checked by:	Kara Hoppes	Downgradient Wells:	MW-36B, MW-37B, MW-20B, MW-14BR, MW-40B, MW-52B, MW-53B
Date:	1/12/2024	Date:	1/16/2024		

Hydrualic Gradient (i, ft/ft)

$$i = -dh/dl$$

where, i= hydraulic gradient
dh= change in hydraulic head between upgradient and downgradient locations
dl= horizontal distance between upgradient and downgradient locations, parallel to flow (perpendicular to potentiometric contours)

Summary Table - Hydraulic Gradient

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins TestAmerica Project Manager.

Project/Site: Basin 2023 Support

Qualifiers

Rad

Qualifier	Qualifier Description
U	Result is less than the sample detection limit.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 280-177698-1

Laboratory: Eurofins Denver

Narrative

CASE NARRATIVE

Client: AECOM Technical Services Inc.

Project: Basin 2023 Support

Report Number: 280-177698-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 6/9/2023 4:15 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 5 coolers at receipt time were 0.1º C, 0.5º C, 1.0º C, 1.1º C and 1.2º C.

Receipt Exceptions

Per client request, samples RW-1 (280-177698-21) and RW-2 (280-177698-22) and the radiochemistry are reported under separate cover.

The combined Ra226/Ra228 method was canceled for sample EB-01 (280-177698-20) due to insufficient volume for Ra226.

RADIUM-226 (GFPC)

Samples MW-42B (280-177698-1), MW-43B (280-177698-2), MW-47B (280-177698-3), MW-46B (280-177698-4), MW-45B (280-177698-5), MW-44B (280-177698-6), MW-41B (280-177698-7), MW-37B (280-177698-8), MW-36B (280-177698-9), MW-32B (280-177698-10), MW-39B (280-177698-11), MW-40B (280-177698-12), MW-49B (280-177698-13), MW-14B (280-177698-14), MW-20B (280-177698-15), Dup-01 (280-177698-16), MW-38B (280-177698-17), MW-21B (280-177698-18) and MW-38C (280-177698-19) were analyzed for Radium-226 (GFPC) in accordance with SW 846 9315. The samples were prepared on 06/16/2023 and analyzed on 07/11/2023 and 07/12/2023.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

RADIUM-228

Samples MW-42B (280-177698-1), MW-43B (280-177698-2), MW-47B (280-177698-3), MW-46B (280-177698-4), MW-45B (280-177698-5), MW-44B (280-177698-6), MW-41B (280-177698-7), MW-37B (280-177698-8), MW-36B (280-177698-9), MW-32B (280-177698-10), MW-39B (280-177698-11), MW-40B (280-177698-12), MW-49B (280-177698-13), MW-14B (280-177698-14), MW-20B (280-177698-15), Dup-01 (280-177698-16), MW-38B (280-177698-17), MW-21B (280-177698-18), MW-38C (280-177698-19) and EB-01 (280-177698-20) were analyzed for Radium-228 in accordance with 9320. The samples were prepared on 06/16/2023 and 06/20/2023 and analyzed on 06/26/2023 and 06/30/2023.

Radium-228 batch 616848: Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. 280-177698-20, LCS 160-616848/2-A, LCSD 160-616848/3-A and MB 160-616848/1-A

Job ID: 280-177698-1 (Continued)

Laboratory: Eurofins Denver (Continued)

Radium-228 batch 616378: Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. 280-177698-1, 280-177698-2, 280-177698-3, 280-177698-4, 280-177698-5, 280-177698-6, 280-177698-7, 280-177698-8, 280-177698-9, 280-177698-10, 280-177698-11, 280-177698-12, 280-177698-13, 280-177698-14, 280-177698-15, 280-177698-16, 280-177698-17, 280-177698-18, 280-177698-18[MS], 280-177698-18[MSD], 280-177698-19, LCS 160-616378/2-A and MB 160-616378/1-A

Radium-228 Prep Batch 160-616848L: Insufficient sample volume was available to perform a sample duplicate for the following samples: 280-177698-20. A laboratory control sample/ laboratory control sample duplicate (LCS/LCSD) were prepared instead to demonstrate batch precision.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

RADIUM-226/RADIUM-228 (GFPC)

Samples MW-42B (280-177698-1), MW-43B (280-177698-2), MW-47B (280-177698-3), MW-46B (280-177698-4), MW-45B (280-177698-5), MW-44B (280-177698-6), MW-41B (280-177698-7), MW-37B (280-177698-8), MW-36B (280-177698-9), MW-32B (280-177698-10), MW-39B (280-177698-11), MW-40B (280-177698-12), MW-49B (280-177698-13), MW-14B (280-177698-14), MW-20B (280-177698-15), Dup-01 (280-177698-16), MW-38B (280-177698-17), MW-21B (280-177698-18) and MW-38C (280-177698-19) were analyzed for Radium-226/Radium-228 (GFPC) in accordance with 9315/9320. The samples were analyzed on 07/12/2023.

Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. 280-177698-1, 280-177698-2, 280-177698-3, 280-177698-4, 280-177698-5, 280-177698-6, 280-177698-7, 280-177698-8, 280-177698-9, 280-177698-10, 280-177698-11, 280-177698-12, 280-177698-13, 280-177698-14, 280-177698-15, 280-177698-16, 280-177698-17, 280-177698-18, 280-177698-18[MS], 280-177698-18[MSD], 280-177698-19, LCS 160-616377/2-A and MB 160-616377/1-A

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Note: Since laboratory accreditations are subject to change, Eurofins TestAmerica places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins TestAmerica laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins TestAmerica attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins TestAmerica.

Possible Hazard Identification	*Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)*

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins TestAmerica Project Manager.

Definitions/Glossary

Client: AECOM Technical Services Inc.
Project/Site: Basin 2023 Support

Job ID: 280-177698-2

Qualifiers

Metals

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
F1	MS and/or MSD recovery exceeds control limits.

General Chemistry

Qualifier	Qualifier Description
^-	Continuing Calibration Verification (CCV) is outside acceptance limits, low biased.
E	Result exceeded calibration range.
F1	MS and/or MSD recovery exceeds control limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 280-177698-2

Laboratory: Eurofins Denver

Narrative

CASE NARRATIVE

Client: AECOM Technical Services Inc.

Project: Basin 2023 Support

Report Number: 280-177698-2

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 6/9/2023 4:15 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 5 coolers at receipt time were 0.1º C, 0.5º C, 1.0º C, 1.1º C and 1.2º C.

Receipt Exceptions

Per client request, the results for samples RW-1 (280-177698-21) and RW-2 (280-177698-22) are reported under 280-177698-3 (chemcial) and 280-177698-4 (radiochemical).

TOTAL METALS (ICP)

Samples MW-42B (280-177698-1), MW-43B (280-177698-2), MW-47B (280-177698-3), MW-46B (280-177698-4), MW-45B (280-177698-5), MW-44B (280-177698-6), MW-41B (280-177698-7), MW-37B (280-177698-8), MW-36B (280-177698-9), MW-32B (280-177698-10), MW-39B (280-177698-11), MW-40B (280-177698-12), MW-49B (280-177698-13), MW-14B (280-177698-14), MW-20B (280-177698-15), Dup-01 (280-177698-16), MW-38B (280-177698-17), MW-21B (280-177698-18), MW-38C (280-177698-19), and EB-01 (280-177698-20) were analyzed for Total Metals (ICP) in accordance with EPA SW846 6010D. The samples were prepared on 06/16/2023 and analyzed on 06/19/2023 and 06/22/2023.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TOTAL METALS (ICP/MS)

Samples MW-42B (280-177698-1), MW-43B (280-177698-2), MW-47B (280-177698-3), MW-46B (280-177698-4), MW-45B (280-177698-5), MW-44B (280-177698-6), MW-41B (280-177698-7), MW-37B (280-177698-8), MW-36B (280-177698-9), MW-32B (280-177698-10), MW-39B (280-177698-11), MW-40B (280-177698-12), MW-49B (280-177698-13), MW-14B (280-177698-14), MW-20B (280-177698-15), Dup-01 (280-177698-16), MW-38B (280-177698-17), MW-21B (280-177698-18), MW-38C (280-177698-19), and EB-01 (280-177698-20) were analyzed for Total Metals (ICP/MS) in accordance with SW846 6020B. The samples were prepared on 06/16/2023 and analyzed on 06/16/2023 and 06/19/2023.

The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 280-615723 and analytical batch 280-616529 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TOTAL MERCURY

Job ID: 280-177698-2 (Continued)

Laboratory: Eurofins Denver (Continued)

Samples MW-42B (280-177698-1), MW-43B (280-177698-2), MW-47B (280-177698-3), MW-46B (280-177698-4), MW-45B (280-177698-5), MW-44B (280-177698-6), MW-41B (280-177698-7), MW-37B (280-177698-8), MW-36B (280-177698-9), MW-32B (280-177698-10), MW-39B (280-177698-11), MW-40B (280-177698-12), MW-49B (280-177698-13), MW-14B (280-177698-14), MW-20B (280-177698-15), Dup-01 (280-177698-16), MW-38B (280-177698-17), MW-21B (280-177698-18), MW-38C (280-177698-19), and EB-01 (280-177698-20) were analyzed for total mercury in accordance with EPA SW-846 Methods 7470A. The samples were prepared on 06/20/2023 and analyzed on 06/21/2023.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TOTAL DISSOLVED SOLIDS

Samples MW-42B (280-177698-1), MW-43B (280-177698-2), MW-47B (280-177698-3), MW-46B (280-177698-4), MW-45B (280-177698-5), MW-44B (280-177698-6), MW-41B (280-177698-7), MW-37B (280-177698-8), MW-36B (280-177698-9), MW-32B (280-177698-10), MW-39B (280-177698-11), MW-40B (280-177698-12), MW-49B (280-177698-13), MW-14B (280-177698-14), MW-20B (280-177698-15), Dup-01 (280-177698-16), MW-38B (280-177698-17), MW-21B (280-177698-18), MW-38C (280-177698-19), and EB-01 (280-177698-20) were analyzed for total dissolved solids in accordance with SM20 2540C. The samples were analyzed on 06/14/2023 and 06/15/2023.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

ANIONS (28 DAYS)

Samples MW-42B (280-177698-1), MW-43B (280-177698-2), MW-47B (280-177698-3), MW-46B (280-177698-4), MW-45B (280-177698-5), MW-44B (280-177698-6), MW-41B (280-177698-7), MW-37B (280-177698-8), MW-36B (280-177698-9), MW-32B (280-177698-10), MW-39B (280-177698-11), MW-40B (280-177698-12), MW-49B (280-177698-13), MW-14B (280-177698-14), MW-20B (280-177698-15), Dup-01 (280-177698-16), MW-38B (280-177698-17), MW-21B (280-177698-18), MW-38C (280-177698-19), and EB-01 (280-177698-20) were analyzed for anions (28 days) in accordance with EPA SW-846 Method 9056A (28 Days). The samples were analyzed on 06/21/2023.

The concentration of chloride and sulfate in the matrix spike and matrix spike duplicate (MS/MSD) parent sample is higher than the highest point of the calibration range. The recoveries for the MS/MSD are still within the recovery limits of 80-120%. 280-177698-18[MS] and 280-177698-18[MSD]

The concentration of the matrix spike reagent caused the results for the matrix spike and matrix spike duplicate (MS/MSD) to be above the highest point of the calibration range for fluoride. The results for the MS/MSD are still within the standard control limits of 80-120%. 280-177698-18[MS] and 280-177698-18[MSD]

The matrix spike duplicate (MSD) recoveries for analytical batch 280-616840 were outside control limits for fluoride. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

Samples MW-42B (280-177698-1)[10X], MW-43B (280-177698-2)[10X], MW-47B (280-177698-3)[5X], MW-46B (280-177698-4)[5X], MW-45B (280-177698-5)[5X], MW-44B (280-177698-6)[10X], MW-41B (280-177698-7)[10X], MW-37B (280-177698-8)[10X], MW-36B (280-177698-9)[5X], MW-32B (280-177698-10)[20X], MW-39B (280-177698-11)[10X], MW-40B (280-177698-12)[5X], MW-49B (280-177698-13)[5X], MW-14B (280-177698-14)[5X], MW-20B (280-177698-15)[10X], Dup-01 (280-177698-16)[10X], MW-38B (280-177698-17)[10X], MW-38B (280-177698-17)[100X], MW-21B (280-177698-18)[10X], and MW-38C (280-177698-19)[10X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Creator: Naylis, Patrick J

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins TestAmerica Project Manager.

Qualifiers

Rad

Qualifier	Qualifier Description
U	Result is less than the sample detection limit.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 280-177698-3

Laboratory: Eurofins Denver

Narrative

CASE NARRATIVE

Client: AECOM Technical Services Inc.

Project: Basin 2023 Support

Report Number: 280-177698-3

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT
The samples were received on 06/09/2023 4:15PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 5 coolers at receipt was 0.1ºC, 0.5ºC, 1.0ºC, 1.1ºC and 1.2ºC.

Receipt Exceptions

Per client request the radiochemical results for RW-1 (280-177698-21) and RW-2 (280-177698-22) are reported here. The chemical results are reported under cover 280-177698-4. All other samples on the Chain of Custody (COC) are reported under cover 280-177698-1 (radiochemical) and 280-177698-2 (chemical).

RADIUM-226 (GFPC)
Samples RW-1 (280-177698-21) and RW-2 (280-177698-22) were analyzed for Radium-226 (GFPC) in accordance with SW 846 9315. The samples were prepared on 06/16/2023 and analyzed on 07/12/2023.

Radium-226 prep batch 160-616377: Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. 280-177698-21, LCS 160-616377/2-A, MB 160-616377/1-A, 280-177698-A-18-A, 280-177698-A-18-B MS and 280-177698-A-18-C MSD

Radium-226 batch 616381: Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.
280-177698-22, LCS 160-616381/2-A, MB 160-616381/1-A, 160-50356-A-26-A and 160-50356-E-26-C DU

Radium-226 exceeded the RPD limit for the duplicate of sample 160-50356-26.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

RADIUM-228
Samples RW-1 (280-177698-21) and RW-2 (280-177698-22) were analyzed for Radium-228 in accordance with 9320. The samples were prepared on 06/16/2023 and analyzed on 06/30/2023 and 07/05/2023.

Job ID: 280-177698-3 (Continued)

Laboratory: Eurofins Denver (Continued)

Radium-228 batch 616378: Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.
280-177698-21, LCS 160-616378/2-A, MB 160-616378/1-A, 280-177698-A-18-D, 280-177698-A-18-E MS and 280-177698-A-18-F MSD

Radium-228 batch 616382: Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.
280-177698-22, LCS 160-616382/2-A, MB 160-616382/1-A, 160-50356-A-26-B and 160-50356-E-26-D DU

Radium-228 exceeded the RPD limit for the duplicate of sample 160-50356-26.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

RADIUM-226/RADIUM-228 (GFPC)

Samples RW-1 (280-177698-21) and RW-2 (280-177698-22) were analyzed for Radium-226/Radium-228 (GFPC) in accordance with 9315/9320. The samples were analyzed on 07/12/2023 and 07/13/2023.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Detection Summary

Client: AECOM Technical Services Inc.
Project/Site: Basin 2023 Support

Job ID: 280-177698-3

Client Sample ID: RW-1 — Lab Sample ID: 280-177698-21

No Detections.

Client Sample ID: RW-2 — Lab Sample ID: 280-177698-22

No Detections.

This Detection Summary does not include radiochemical test results.

Note: Since laboratory accreditations are subject to change, Eurofins TestAmerica places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins TestAmerica laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins TestAmerica attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins TestAmerica.

Possible Hazard Identification	*Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)*

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins TestAmerica Project Manager.

Project/Site: Basin 2023 Support

Qualifiers

General Chemistry

Qualifier	Qualifier Description
E	Result exceeded calibration range.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 280-177698-4

Laboratory: Eurofins Denver

Narrative

CASE NARRATIVE

Client: AECOM Technical Services Inc.

Project: Basin 2023 Support

Report Number: 280-177698-4

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 6/9/2023 4:15 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 5 coolers at receipt time were 0.1º C, 0.5º C, 1.0º C, 1.1º C and 1.2º C.

Receipt Exceptions

Per client request, the results for samples RW-1 (280-177698-21) and RW-2 (280-177698-22) are reported under 280-177698-3 (chemcial) and 280-177698-4 (radiochemical).

TOTAL METALS (ICP)

Samples RW-1 (280-177698-21) and RW-2 (280-177698-22) were analyzed for Total Metals (ICP) in accordance with EPA SW846 6010D. The samples were prepared on 06/16/2023 and analyzed on 06/19/2023 and 06/22/2023.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TOTAL METALS (ICP/MS)

Samples RW-1 (280-177698-21) and RW-2 (280-177698-22) were analyzed for Total Metals (ICP/MS) in accordance with SW846 6020B. The samples were prepared on 06/16/2023 and analyzed on 06/16/2023 and 06/19/2023.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TOTAL MERCURY

Samples RW-1 (280-177698-21) and RW-2 (280-177698-22) were analyzed for total mercury in accordance with EPA SW-846 Methods 7470A. The samples were prepared on 06/20/2023 and analyzed on 06/21/2023.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TOTAL DISSOLVED SOLIDS

Samples RW-1 (280-177698-21) and RW-2 (280-177698-22) were analyzed for total dissolved solids in accordance with SM20 2540C. The samples were analyzed on 06/14/2023 and 06/15/2023.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

ANIONS (28 DAYS)

Job ID: 280-177698-4 (Continued)

Laboratory: Eurofins Denver (Continued)

Samples RW-1 (280-177698-21) and RW-2 (280-177698-22) were analyzed for anions (28 days) in accordance with EPA SW-846 Method 9056A (28 Days). The samples were analyzed on 06/21/2023.

Samples RW-1 (280-177698-21)[10X] and RW-2 (280-177698-22)[10X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

The concentration of the matrix spike reagent caused the results for the matrix spike and matrix spike duplicate (MS/MSD) to be above the highest point of the calibration range for fluoride. The results for the MS/MSD are still within the standard control limits of 80-120%. 280-177698-D-21[MS] and 280-177698-D-21[MSD]

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Limited Data Validation Report

Basin Electric Laramie, Wyoming
Groundwater Sampling – June 2023
Analyzed by Eurofins TestAmerica Laboratories

Prepared By Lillia Shub
Data Validator

Overview

The samples analyzed for the June 2023 sampling event are listed in the Table of Samples Validated (page 3). Limited data validation was performed on a total of nineteen groundwater samples, one field duplicate sample, and one field blank Quality Control (QC) sample.

Samples were submitted to Eurofins TestAmerica Laboratories of Denver, Colorado.

The reviewed analyses were Select Total Metals by SW-846 Methods 6010C, 6020A, and 7470A, Chloride, Fluoride, and Sulfate by SW-846 Method 9056A, Total Dissolved Solids (TDS) by SM2540C, Radium-226 by SW-846 Method 9315, Radium-228 by SW-846 Method 9320, and combined Radium-226 and Radium-228 by calculation.

The Analytical Limited Data Validation Checklist is presented as pages 4-8. Data were evaluated using guidance set forth in the *United States Environmental Protection Agency (USEPA) contract Laboratory Program (CLP) National Functional Guidelines for Inorganic Superfund Methods Data Review*, document number EPA-542-R-20-006, November 2020; method requirements, and laboratory criteria.

The following data components were reviewed during the data validation procedure:

Submitted Deliverables
Case Narratives (including any assigned laboratory flags)
Chain-of-Custody form(s) and sample integrity
Sample results, reporting limits, dilution factors
Holding times
Method (preparation) blank results
Field blank results
Laboratory control sample (LCS), laboratory control sample duplicate (LCSD) results
Matrix spike (MS), matrix spike duplicate (MSD) results
Laboratory duplicate (or spiked duplicate) results
Field duplicate (FD) results (calculated Relative Percent Differences [RPD])
Electronic data deliverables (EDDs) – EQuIS format

Data Validation Qualifiers Assigned During this Review

J- The result is an estimated quantity, but the result may be biased low.

UJ The analyte was analyzed for but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

Assigned qualifiers are detailed in the Analytical Data Validation Checklist and are summarized in the Table of Qualified Analytical Results (page 9).

Overall Data Assessment

Field and laboratory precision, field and laboratory accuracy, method compliance, and data set completeness are determined to be acceptable based on the data reported No data were missing or rejected. All reported data are suitable for their intended use with the qualifications and clarifications noted.

Project Reference: Sampling – June 2023	Sample Matrix: Groundwater
AECOM Project: 60632474 Task 9.2	Sample Start Date: 06/07/2023
Validator/Date Validated: Lillia Shub August 10, 2023	Sample End Date: 06/09/2023
Secondary Review by: Katie Abbott	Secondary Review Date: August 11, 2023
Samples Analyzed: See Table of Samples Validated (page 3).	
Parameters Validated: Total Metals by SW-846 Method 6010C Total Metals by SW-846 Method 6020A Total Mercury by SW-846 Method 7470A Anions (Chloride, Fluoride, and Sulfate) by SW-846 Method 9056A TDS by SM2540C Radium-226 by SW-846 Method 9315 Radium-228 by SW-846 Method 9320 Combined Radium-226 and Radium-228	
Laboratory Project IDs/Sample Delivery Groups (SDGs): 280-177698-1 and 280-177698-2	

PRECISION, ACCURACY, METHOD COMPLIANCE, AND COMPLETENESS ASSESSMENT						
Precision:	**X**	Acceptable		Unacceptable	LMS	Initials
Comments: Precision is the measure of variability of individual sample measurements. Field precision was evaluated by reviewing the field duplicate results, and laboratory precision was evaluated by reviewing method duplicate sample results, laboratory control sample (LCS) to laboratory control sample duplicate (LCSD) results, and matrix spike (MS) to matrix spike duplicate (MSD) results. The following criteria was used to evaluate the field duplicate results: • For results where both reported values were greater than five times the reporting limit (RL), the relative percent difference between the samples and its field duplicate were compared against a criterion of 30%. • For results where either value reported was less than five times the RL, the absolute difference between the results was compared to a criterion of agreement within ±2 times the RL. • The replicate error ratio (RER) for radiochemical parameters was ≤2. Laboratory criteria was used to evaluate laboratory precision. Field and laboratory precision is acceptable because no data are rejected. Precision measurements are reviewed in items 17 and 21.						
Accuracy:	**X**	Acceptable		Unacceptable	LMS	Initials
Comments: Field accuracy, a measure of the sampling bias, can be determined by reviewing field and equipment blank results for evidence of sample contamination stemming from sampling activities and/or field conditions. Laboratory accuracy is a measure of the system bias, and was measured by evaluating LCS, MS, and MSD percent recoveries (%Rs). LCS %Rs demonstrated the overall performance of the analysis. MS, MSD %Rs provided information on sample matrix interferences. Accuracy measurements were evaluated using laboratory control limits. Overall field and laboratory accuracy is acceptable because the majority of the results are unqualified based on accuracy and no data are rejected. Accuracy measurements are reviewed in items 12, 14, 15, 16, and 20.						
Method Compliance:	**X**	Acceptable		Unacceptable	LMS	Initials
Comments: For this data set, method compliance was determined by evaluating sample integrity, holding time, reporting limits, and laboratory blanks against method specified requirements. Overall method compliance is acceptable because the majority of the results were unqualified based on the method compliance parameters reviewed. Method compliance measurements are also reviewed in items 4, 6, 8, 11, 13, 18, 19, 20, and 22.						
Completeness:	**X**	Acceptable		Unacceptable	LMS	Initials
Comments: Completeness is the overall ratio of the number of samples planned versus the number of samples with valid analyses. Determination of completeness included a review of chain of custody records, laboratory analytical methods and reporting limits, laboratory case narratives, and project requirements. Completeness also included 100% review of the laboratory sample data results, QC summary reports, and electronic data deliverables (EDDs). Any EDD modifications were made as documented in item 23. No data are missing or rejected; therefore, the completeness of the data set was calculated to be 100% and is acceptable. All reported data are suitable for their intended use as reported with the clarifications and qualifications noted.						

VALIDATION CRITERIA CHECK

Data validation qualifiers potentially assigned during this review:

J- The result is an estimated quantity, but the result may be biased low.

UJ The result is an estimated non detect.

The following comments identifying sample results requiring qualification are in bold type. The other comments are of interest, but qualification of the sample results is not necessary.

1. Did the laboratory identify any non-conformances related to the analytical results?	**X**	Yes		No	LMS	Initials

Comments: Data qualification, if any, related to the narrative comments and/or assigned laboratory flags contained in the analytical reports are discussed in the following sections.

2. Were sample Chain-of-Custody (COC) forms complete?	**X**	Yes		No	LMS	Initials

Comments: No issues were observed, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt.

Data Packages 280-177698-1 and 280-177698-2

Samples RW-1 and RW-2 listed on the COC are included in separate data packages (280-177698-3 and 280-177698-4) did not require validation.

3. Were all the analyses requested for the samples on the COCs completed by the laboratory?		Yes	**X**	No	LMS	Initials

Comments: With the exception noted below, all requested analyses were completed by the laboratory.

Data Package 280-177698-1

The radium-226 combined radium-226/radium-228 method was canceled for sample EB-01 due to insufficient volume.

4. Were samples received in good condition and at the appropriate temperature?	**X**	Yes		No	LMS	Initials

Comments: All samples were received intact and within the recommended <6°C temperature for the applicable methods.

5. Were the reported analytical methods in compliance with WP/QAPP, permit, or COC?	**X**	Yes		No	LMS	Initials

Comments: The reported target analytes and methods are in compliance with parameters and methods listed on the COC.

6. Were detection limits in accordance with WP/QAPP, permit, or method?		Yes	**X**	No	LMS	Initials

Comments: No results were reported as non-detect at elevated reporting limits.

Radiological parameters, if the associated uncertainty was greater than the reported result, the 2 sigma (σ) uncertainty multiplied by 1.65 was less than or equal to the specified detection limit, with the exception noted below.

Samples	Analyte	Result (pCi/L)	2 Sigma (σ) Uncertainty	MDC (pCi/L)	Qualification
Data Package 280-177698-1					
MW-36B	Radium-226	0.0428	±0.0541	0.0891	As the 2σ uncertainty multiplied by 1.65 was greater than the reported minimum detectable concentration (MDC), the associated results were qualified as estimated (UJ v).
MW-37B	Combined Radium	0.305	±0.362	0.592	
MW-38C	Combined Radium	0.348	±0.393	0.627	
	Radium-228	0.375	±0.39	0.627	
MW-39B	Combined Radium	0.5	±0.586	0.964	
MW-49B	Radium-226	0.0613	±0.0662	0.105	
	Radium-228	0.339	±0.355	0.571	

σ – Sigma
± – Plus or Minus
pCi/L – Picocuries per Liter
UJ – Estimated Non Detect

VALIDATION CRITERIA CHECK						
MDC – Minimum Detectable Concentration v – Compound Identification Issue						
7. Do the laboratory reports include only those constituents requested to be reported for a specific analytical method?	**X**	Yes		No	LMS	Initials
Comments: Only the requested target analytes were reported.						
8. Were sample holding times met?	**X**	Yes		No	LMS	Initials
Comments: Sample preparation and analytical holding times were within the method requirements.						
9. Were correct concentration units reported?	**X**	Yes		No	LMS	Initials
Comments: Metals were reported as mg/L (ppm), TDS and anions were reported as ug/L (ppb), and radiochemistry data was reported in picocuries per liter (pCi/L).						
10. Were the reporting requirements for flagged data met?	**X**	Yes		No	LMS	Initials
Comments: Laboratory flags were reviewed and considered during the data validation procedure. Data validation qualifiers override assigned laboratory flags.						
11. Were laboratory blank samples free of target analyte contamination?	**X**	Yes		No	LMS	Initials
Comments: The laboratory blanks were free of target analyte contamination.						
12. Were trip blank, field blank, and/or equipment rinse blank samples free of target analyte contamination?	**X**	Yes		No	LMS	Initials
Comments: A trip blank and field blank were not required for this sampling event. One equipment blank was collected. The field blank was free of target analyte contamination.						
13. Were instrument calibrations within method or data validation control limits?	**NA**	Yes	**NA**	No	LMS	Initials
Comments: Not applicable for the analytical methods reported.						
14. Were surrogate/tracer recoveries within control limits?	**X**	Yes		No	LMS	Initials
Comments: The associated tracer recoveries were within control limits.						
15. Were laboratory control sample recoveries and relative percent difference (RPDs) within control limits?	**X**	Yes		No	LMS	Initials
Comments: LCS and/or LCSD percent recoveries and RPDs were within laboratory control limits.						
16. Were matrix spike recoveries and RPDs within control limits?		Yes	**X**	No	LMS	Initials

Comments: A matrix spike/matrix spike duplicate (MS/MSD) was performed on sample MW-21B for all analyses

Sample	Analyte	%R (Limits)	RPD (Limits)	Comment
MW-21B	Cobalt	**93**/94 (94-115)	2 (20)	As the potential bias was considered to be low, the associated results were qualified as estimated (UJ/J- m).
	Fluoride	93/**79** (80-120)	14 (20)	

Bold indicates a recovery or RPD outside acceptance limit.
%R – Percent Recovery
J- – Estimated, with a potential los bias
m – Matrix spike/matrix spike duplicate recovery failure
RPD – Relative Percent Difference
UJ – Estimated non detect

Refer to the Table of Qualified Analytical Results for a listing of the samples, analytes, and concentrations qualified (page 9).

17. Were laboratory duplicate RPDs and/or serial dilution %Ds within control limits?	**X**	Yes	**X**	No	LMS	Initials
Comments: A laboratory duplicate was not performed for anions and total dissolved solids. Serial dilutions were not evaluated for this level of validation.						

VALIDATION CRITERIA CHECK						
18. Were organic system performance criteria met?	**NA**	Yes	**NA**	No	LMS	Initials
Comments: Not applicable for this level of limited data validation or for the methods reported.						
19. Were internal standards within method criteria for ICP-MS sample analyses?	**NA**	Yes	**NA**	No	LMS	Initials
Comments: Not evaluated for this level of data validation. No internal standard issues were noted in the case narrative.						
20. Were system performance criteria met?	**NA**	Yes	**NA**	No	LMS	Initials
Comments: Not evaluated for this level of data validation. Inorganic system performance data were not supplied in the analytical laboratory reports and are therefore not included in this data review.						
21. Were field duplicates collected? If so, discuss the precision (RPD and/or RER) of the results.	**X**	Yes		No	LMS	Initials
Duplicate Sample No.	DUP-01	Primary Sample No.		MW-20B		
Comments: The duplicate sample pair met the acceptance criteria.						
22. Were qualitative criteria for organic target analyte identification met?	**NA**	Yes	**NA**	No	LMS	Initials
Comments: Not applicable for this level of limited data validation or for the methods reported.						
23. Were 10% of the EDD concentrations and reporting limits compared to the hardcopy data reports?	**X**	Yes		No	LMS	Initials
Comments: During the validation procedure, 10% of the positive sample concentrations and 100% of the RLs for project samples were compared to hardcopy laboratory reports. The data validator made sure that RLs were entered into the correct EDD fields.						
24. General Comments: Data were also evaluated using guidance set forth in the United States Environmental Protection Agency (USEPA) contract Laboratory Program (CLP) National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-542-R-20-006, November 2020; method requirements, and laboratory criteria. All data is considered usable.						

Table of Qualified Analytical Results
Basin Electric – Laramie, Wyoming
June 2023 Sampling
Eurofins TestAmerica Laboratories

Laboratory Group	Sample ID	Lab Sample ID	Analytical Method	Analyte	Flag	Reason Code
280-177698-1	MW-37B	280-177698-8	RA226RA228	Combined Radium 226 + 228	UJ	v
280-177698-1	MW-36B	280-177698-9	SW9315	Radium-226	UJ	v
280-177698-1	MW-39B	280-177698-11	RA226RA228	Combined Radium 226 + 228	UJ	v
280-177698-1	MW-49B	280-177698-13	SW9315	Radium-226	UJ	v
280-177698-1	MW-49B	280-177698-13	SW9320	Radium-228	UJ	v
280-177698-2	MW-21B	280-177698-18	SW6020B	Cobalt	UJ	m
280-177698-2	MW-21B	280-177698-18	SW9056A	Fluoride	J-	m
280-177698-1	MW-38C	280-177698-19	RA226RA228	Combined Radium 226 + 228	UJ	v
280-177698-1	MW-38C	280-177698-19	SW9320	Radium-228	UJ	v

ID – Identification
J- – The result is an estimated quantity, but the result may be biased low.
m – Matrix spike/matrix spike duplicate recovery failure
UJ - The analyte was analyzed for but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
v – Compound Identification Issue

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins TestAmerica Project Manager.

Qualifiers

Rad

Qualifier	Qualifier Description
U	Result is less than the sample detection limit.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 280-183794-1

Laboratory: Eurofins Denver

Narrative

CASE NARRATIVE

Client: AECOM Technical Services Inc.

Project: Basin 2023 Support

Report Number: 280-183794-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT
The samples were received on 10/30/2023 3:50 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 5 coolers at receipt time were 0.4º C, 0.7º C, 0.9º C, 2.0º C and 2.1º C.

Receipt Exceptions
Sample MW-45B is listed twice on the chain of custody. The second listing is logged as MW-44B, 280-183794-16, per container labels with matching date and time of 10/27/23 at 12:45.

Radium 226 and Radium 228 data are presented in SDG 280-183794-1. All other requested data are presented in SDG 280-183794-2.

RADIUM-226 (GFPC)
Samples MW-38C (280-183794-1), MW-21B (280-183794-2), MW-14BR (280-183794-3), MW-20B (280-183794-4), MW-38B (280-183794-5), MW-49B (280-183794-6), MW-52B (280-183794-7), MW-40B (280-183794-8), MW-39B (280-183794-9), MW-41B (280-183794-10), MW-42B (280-183794-11), MW-43B (280-183794-12), MW-47B (280-183794-13), MW-46B (280-183794-14), MW-45B (280-183794-15), MW-44B (280-183794-16), MW-37B (280-183794-17), MW-36B (280-183794-18), Dup-01 (280-183794-19), MW-32B (280-183794-20) and Field Blank (280-183794-21) were analyzed for Radium-226 (GFPC) in accordance with SW 846 9315. The samples were prepared on 11/02/2023 and analyzed on 12/01/2023.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

RADIUM-228
Samples MW-38C (280-183794-1), MW-21B (280-183794-2), MW-14BR (280-183794-3), MW-20B (280-183794-4), MW-38B (280-183794-5), MW-49B (280-183794-6), MW-52B (280-183794-7), MW-40B (280-183794-8), MW-39B (280-183794-9), MW-41B (280-183794-10), MW-42B (280-183794-11), MW-43B (280-183794-12), MW-47B (280-183794-13), MW-46B (280-183794-14), MW-45B (280-183794-15), MW-44B (280-183794-16), MW-37B (280-183794-17), MW-36B (280-183794-18), Dup-01 (280-183794-19), MW-32B (280-183794-20) and Field Blank (280-183794-21) were analyzed for Radium-228 in accordance with 9320. The samples were prepared on 11/02/2023 and analyzed on 11/27/2023.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

RADIUM-226/RADIUM-228 (GFPC)
Samples MW-38C (280-183794-1), MW-21B (280-183794-2), MW-14BR (280-183794-3), MW-20B (280-183794-4), MW-38B

Job ID: 280-183794-1 (Continued)

Laboratory: Eurofins Denver (Continued)

(280-183794-5), MW-49B (280-183794-6), MW-52B (280-183794-7), MW-40B (280-183794-8), MW-39B (280-183794-9), MW-41B (280-183794-10), MW-42B (280-183794-11), MW-43B (280-183794-12), MW-47B (280-183794-13), MW-46B (280-183794-14), MW-45B (280-183794-15), MW-44B (280-183794-16), MW-37B (280-183794-17), MW-36B (280-183794-18), Dup-01 (280-183794-19), MW-32B (280-183794-20) and Field Blank (280-183794-21) were analyzed for Radium-226/Radium-228 (GFPC) in accordance with 9315/9320. The samples were analyzed on 12/04/2023.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Method Summary

Client: AECOM Technical Services Inc.

Note: Since laboratory accreditations are subject to change, Eurofins TestAmerica places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins TestAmerica laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins TestAmerica attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins TestAmerica.

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins TestAmerica Project Manager.

Qualifiers

Metals

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
B	Compound was found in the blank and sample.
F1	MS and/or MSD recovery exceeds control limits.

General Chemistry

Qualifier	Qualifier Description
^+	Continuing Calibration Verification (CCV) is outside acceptance limits, high biased.
F1	MS and/or MSD recovery exceeds control limits.
F2	MS/MSD RPD exceeds control limits
F3	Duplicate RPD exceeds the control limit
H	Sample was prepped or analyzed beyond the specified holding time. This does not meet regulatory requirements.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 280-183794-2

Laboratory: Eurofins Denver

Narrative

CASE NARRATIVE

Client: AECOM Technical Services Inc.

Project: Basin 2023 Support

Report Number: 280-183794-2

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 10/30/2023 3:50 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 5 coolers at receipt time were 0.4º C, 0.7º C, 0.9º C, 2.0º C and 2.1º C.

Receipt Exceptions

Sample MW-45B is listed twice on the chain of custody. The second listing is logged as MW-44B, 280-183794-16, per container labels with matching date and time of 10/27/23 at 12:45.

Radium 226 and Radium 228 data are presented in SDG 280-183794-1. All other requested data are presented in SDG 280-183794-2.

TOTAL METALS (ICP)

Samples MW-38C (280-183794-1), MW-21B (280-183794-2), MW-14BR (280-183794-3), MW-20B (280-183794-4), MW-38B (280-183794-5), MW-49B (280-183794-6), MW-52B (280-183794-7), MW-40B (280-183794-8), MW-39B (280-183794-9), MW-41B (280-183794-10), MW-42B (280-183794-11), MW-43B (280-183794-12), MW-47B (280-183794-13), MW-46B (280-183794-14), MW-45B (280-183794-15), MW-44B (280-183794-16), MW-37B (280-183794-17), MW-36B (280-183794-18), Dup-01 (280-183794-19), MW-32B (280-183794-20) and Field Blank (280-183794-21) were analyzed for Total Metals (ICP) in accordance with EPA SW846 6010D. The samples were prepared on 11/09/2023 and analyzed on 11/10/2023.

The method blank for preparation batch 280-633114 and analytical batch 280-633389 contained Ca above the reporting limit (RL). Associated sample(s) were not re-extracted and/or re-analyzed because results were greater than 10X the value found in the method blank.

Calcium failed the recovery criteria low for the MSD of sample MW-32BMSD (280-183794-20) in batch 280-633389.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TOTAL METALS (ICP/MS)

Samples MW-38C (280-183794-1), MW-21B (280-183794-2), MW-14BR (280-183794-3), MW-20B (280-183794-4), MW-38B (280-183794-5), MW-49B (280-183794-6), MW-52B (280-183794-7), MW-40B (280-183794-8), MW-39B (280-183794-9), MW-41B (280-183794-10), MW-42B (280-183794-11), MW-43B (280-183794-12), MW-47B (280-183794-13), MW-46B (280-183794-14), MW-45B (280-183794-15), MW-44B (280-183794-16), MW-37B (280-183794-17), MW-36B (280-183794-18), Dup-01 (280-183794-19), MW-32B (280-183794-20) and Field Blank (280-183794-21) were analyzed for Total Metals (ICP/MS) in accordance with SW846 6020B. The

Job ID: 280-183794-2 (Continued)

Laboratory: Eurofins Denver (Continued)

samples were prepared on 11/09/2023 and analyzed on 11/10/2023 and 11/11/2023.

Cobalt failed the recovery criteria low for the MS of sample MW-32BMS (280-183794-20) in batch 280-633479. Several analytes failed the recovery criteria low for the MSD of sample MW-32BMSD (280-183794-20) in batch 280-633479.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TOTAL MERCURY

Samples MW-38C (280-183794-1), MW-21B (280-183794-2), MW-14BR (280-183794-3), MW-20B (280-183794-4), MW-38B (280-183794-5), MW-49B (280-183794-6), MW-52B (280-183794-7), MW-40B (280-183794-8), MW-39B (280-183794-9), MW-41B (280-183794-10), MW-42B (280-183794-11), MW-43B (280-183794-12), MW-47B (280-183794-13), MW-46B (280-183794-14), MW-45B (280-183794-15), MW-44B (280-183794-16), MW-37B (280-183794-17), MW-36B (280-183794-18), Dup-01 (280-183794-19), MW-32B (280-183794-20) and Field Blank (280-183794-21) were analyzed for total mercury in accordance with EPA SW-846 Methods 7470A. The samples were prepared and analyzed on 11/09/2023.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TOTAL DISSOLVED SOLIDS

Samples MW-38C (280-183794-1), MW-21B (280-183794-2), MW-14BR (280-183794-3), MW-20B (280-183794-4), MW-38B (280-183794-5), MW-49B (280-183794-6), MW-52B (280-183794-7), MW-40B (280-183794-8), MW-39B (280-183794-9), MW-41B (280-183794-10), MW-42B (280-183794-11), MW-43B (280-183794-12), MW-47B (280-183794-13), MW-46B (280-183794-14), MW-45B (280-183794-15), MW-44B (280-183794-16), MW-37B (280-183794-17), MW-36B (280-183794-18), Dup-01 (280-183794-19), MW-32B (280-183794-20) and Field Blank (280-183794-21) were analyzed for total dissolved solids in accordance with SM20 2540C. The samples were analyzed on 11/02/2023 and 11/03/2023.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

ANIONS (28 DAYS)

Samples MW-38C (280-183794-1), MW-21B (280-183794-2), MW-14BR (280-183794-3), MW-20B (280-183794-4), MW-38B (280-183794-5), MW-49B (280-183794-6), MW-52B (280-183794-7), MW-40B (280-183794-8), MW-39B (280-183794-9), MW-41B (280-183794-10), MW-42B (280-183794-11), MW-43B (280-183794-12), MW-47B (280-183794-13), MW-46B (280-183794-14), MW-45B (280-183794-15), MW-44B (280-183794-16), MW-37B (280-183794-17), MW-36B (280-183794-18), Dup-01 (280-183794-19), MW-32B (280-183794-20) and Field Blank (280-183794-21) were analyzed for anions (28 days) in accordance with EPA SW-846 Method 9056A (28 Days). The samples were analyzed on 11/21/2023, 11/22/2023, 11/25/2023 and 11/26/2023.

Reanalysis of the following samples were performed outside of the analytical holding time due to QC failures during the original analyses : 280-183794-2, 280-183794-6, 280-183794-7, 280-183794-8, 280-183794-9, 280-183794-10, 280-183794-11, 280-183794-12, 280-183794-13, 280-183794-14, 280-183794-15, 280-183794-16, 280-183794-17, 280-183794-18, 280-183794-19, 280-183794-20, 280-183794-20[MS], 280-183794-20[MSD] and 280-183794-C-20 DU.

Reanalysis of the following samples were performed outside of the analytical holding time due to the sample requiring a dilution for a target compound : 280-183794-1 and 280-183794-5.

Samples MW-38C (280-183794-1)[5X], MW-21B (280-183794-2)[20X], MW-14BR (280-183794-3)[20X], MW-20B (280-183794-4)[5X], MW-38B (280-183794-5)[20X], MW-38B (280-183794-5)[50X], MW-49B (280-183794-6)[5X], MW-52B (280-183794-7)[5X], MW-40B (280-183794-8)[5X], MW-39B (280-183794-9)[5X], MW-41B (280-183794-10)[10X], MW-42B (280-183794-11)[20X], MW-43B (280-183794-12)[10X], MW-47B (280-183794-13)[10X], MW-46B (280-183794-14)[10X], MW-45B (280-183794-15)[10X], MW-44B (280-183794-16)[10X], MW-37B (280-183794-17)[10X], MW-36B (280-183794-18)[10X], Dup-01 (280-183794-19)[10X] and MW-32B (280-183794-20)[10X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 280-635091 were outside control limits for Fluoride. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS/LCSD) recovery is within acceptance limits. 280-183794-C-2 MS and 280-183794-C-2 MSD

The matrix spike / matrix spike duplicate (MS/MSD) recoveries and precision for analytical batch 280-635091 were outside control limits.

Job ID: 280-183794-2 (Continued)

Laboratory: Eurofins Denver (Continued)

Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample / laboratory sample control duplicate (LCS/LCSD) precision was within acceptance limits.

Chloride exceeded the RPD limit for the duplicate of sample MW-38CDU (280-183794-1). Refer to the QC report for details.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Inorganic and Radiochemistry
Limited Data Validation Report

Basin Electric Laramie, Wyoming
Groundwater Sampling – October 2023
Analyzed by Eurofins Environment Testing

Prepared By Jamie Herman
Project Chemist

Overview

The samples analyzed for the October 2023 sampling event are listed in the Table of Samples Validated (page 3). Limited data validation was performed on a total of 19 groundwater samples, one field duplicate sample, and one field blank sample.

Samples were submitted to Eurofins Environment Testing in Denver, Colorado.

The reviewed analyses were Select Total Metals by SW-846 Methods 6010C, 6020A, and 7470A, Chloride, Fluoride, and Sulfate by SW-846 Method 9056A, Total Dissolved Solids (TDS) by SM2540C, Radium-226 by SW-846 Method 9315, Radium-228 by SW-846 Method 9320, and combined Radium-226 and Radium-228 by calculation.

The Analytical Limited Data Validation Checklist is presented as pages 4-8. Data were evaluated using guidance set forth in the *National Functional Guidelines for Inorganic Superfund Methods Data Review*, (November 2020), method requirements, and laboratory criteria, as applicable.

The following data components were reviewed during the data validation procedure:

Submitted Deliverables
Case Narratives (including any assigned laboratory flags)
Chain-of-Custody form(s) and sample integrity
Sample results, reporting limits, dilution factors
Holding times
Method (preparation) blank results
Field blank results
Laboratory control sample (LCS), laboratory control sample duplicate (LCSD) results
Matrix spike (MS), matrix spike duplicate (MSD) results
Laboratory duplicate (or spiked duplicate) results
Field duplicate (FD) results (calculated Relative Percent Differences [RPD])
Electronic data deliverables (EDDs) – EQuIS format

Data Validation Qualifiers Potentially Assigned During this Review

J The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.

J+ The result is an estimated quantity, but the result may be biased high.

J- The result is an estimated quantity, but the result may be biased low.

R The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.

U The analyte was analyzed for, but was not detected above the level of the adjusted detection limit or quantitation limit, as appropriate.

UJ The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

Assigned qualifiers are detailed in the Analytical Data Validation Checklist and are summarized in the Table of Qualified Analytical Results (page 9).

Overall Data Assessment

Field and laboratory precision, field and laboratory accuracy, method compliance, and data set completeness are determined to be acceptable based on the data reported. With the exception of the fluoride results for samples MW-32B and MW-52B, that were qualified as unusable due to method holding time exceedances, the completeness of the data set was calculated to be greater than 99% and is acceptable. All other reported data are suitable for their intended use with the qualifications and clarifications noted.

Samples Analyzed: See page 3.	
Parameters Validated: Total Metals by SW-846 Methods 6010C, 6020A, and 7470A, Anions (Chloride, Fluoride, and Sulfate) by SW-846 Method 9056A, TDS by SM2540C, Radium-226 by SW-846 Method 9315, Radium-228 by SW-846 Method 9320, and Combined Radium	
Sample Delivery Groups (SDGs): 280-183794-1, 280-183794-2	

PRECISION, ACCURACY, METHOD COMPLIANCE, AND COMPLETENESS ASSESSMENT

Precision:	**X**	Acceptable		Unacceptable	JH	Initials

Comments: Precision is the measure of variability of individual sample measurements. Field precision was evaluated by reviewing the field duplicate results, and laboratory precision was evaluated by reviewing method duplicate sample results, laboratory control sample (LCS) to laboratory control sample duplicate (LCSD) results, and matrix spike (MS) to matrix spike duplicate (MSD) results.

Laboratory criteria was used to evaluate laboratory precision.

Field and laboratory precision is acceptable because no data are rejected. Precision measurements are reviewed in items 17 and 21.

Accuracy:	**X**	Acceptable		Unacceptable	JH	Initials

Comments: Field accuracy, a measure of the sampling bias, can be determined by reviewing field and equipment blank results for evidence of sample contamination stemming from sampling activities and/or field conditions. Laboratory accuracy is a measure of the system bias, and was measured by evaluating LCS, MS, and MSD percent recoveries (%Rs). LCS %Rs demonstrated the overall performance of the analysis. MS, MSD %Rs provided information on sample matrix interferences. Accuracy measurements were evaluated using laboratory control limits. Overall field and laboratory accuracy is acceptable because the majority of the results are unqualified based on accuracy and no data are rejected. Accuracy measurements are reviewed in items 12, 14, 15, 16, and 20.

Method Compliance:	**X**	Acceptable		Unacceptable	JH	Initials

Comments: For this data set, method compliance was determined by evaluating sample integrity, holding time, reporting limits, and laboratory blanks against method specified requirements. Overall method compliance is acceptable because the majority of the results were unqualified, and limited results were qualified as unusable based on the method compliance parameters. Method compliance measurements are also reviewed in items 4, 6, 8, 11, 13, 18, 19, 20, and 22.

Completeness:	**X**	Acceptable		Unacceptable	JH	Initials

Comments: Completeness is the overall ratio of the number of samples planned versus the number of samples with valid analyses. Determination of completeness included a review of chain of custody records, laboratory analytical methods and reporting limits, laboratory case narratives, and project requirements. Completeness also included 10% review of the laboratory sample data results, QC summary reports, and electronic data deliverables (EDDs). Any EDD modifications were made as documented in item 23.

With the exception of the fluoride results for samples MW-32B and MW-52B, that were qualified as unusable due to method holding time exceedances, the completeness of the data set was calculated to be greater than 99% and is acceptable. All other reported data are suitable for their intended use as reported with the clarifications and qualifications noted.

VALIDATION CRITERIA CHECK

Data validation qualifiers potentially assigned during this review:

- J The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
- J+ The result is an estimated quantity, but the result may be biased high.
- J- The result is an estimated quantity, but the result may be biased low.
- R The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.
- U The analyte was analyzed for, but was not detected above the level of the adjusted detection limit or quantitation limit, as appropriate.
- UJ The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

The following comments identifying sample results requiring qualification are in **bold** type. The other comments are of interest, but qualification of the sample results is not necessary.

1. Did the laboratory identify any non-conformances related to the analytical results?	**X**	Yes		No	JH	Initials
Comments: Data qualification, if any, related to the narrative comments and/or assigned laboratory flags contained in the analytical reports are discussed in the following sections.						
2. Were sample Chain-of-Custody (COC) forms complete?		Yes	**X**	No	JH	Initials
Comments: With the following exception, no issues were observed, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. Due to field sampling error, sample MW-45B is listed on the COC twice. The laboratory correctly logged the samples by the associated container labels as MW-45B collected at 12:00, and MW-44B collected at 12:45. No further action was considered necessary.						
3. Were all the analyses requested for the samples on the COCs completed by the laboratory?	**X**	Yes		No	JH	Initials
Comments: All requested analyses were completed by the laboratory.						
4. Were samples received in good condition and at the appropriate temperature?	**X**	Yes		No	JH	Initials
Comments: All samples were received intact and within the recommended <6°C temperature, as applicable to the Methods.						
5. Were the reported analytical methods in compliance with WP/QAPP, permit, or COC?	**X**	Yes		No	JH	Initials
Comments: The reported target analytes and methods complied with parameters and methods listed on the COC.						
6. Were detection limits in accordance with WP/QAPP, permit, or method?		Yes	**X**	No	JH	Initials

Comments: With the exception of fluoride for sample MW-39B, no sample results were reported as non-detect at elevated reporting limits.

For radiological parameters, if the associated uncertainty was greater than the reported result, the 2 sigma (σ) uncertainty multiplied by 1.65 was less than or equal to the specified detection limit, with the exceptions listed in the table below.

Samples	Analyte	Result (pCi/L)	2 Sigma (σ) Uncertainty	MDC (pCi/L)	Qualification
Data Package 280-183794-1					
MW-21B	Combined Radium	0.284	±0.38	0.621	As the 2σ uncertainty multiplied by 1.65 was greater than the reported minimum detectable concentration (MDC), the
MW-43B	Radium-228	0.445	±0.461	0.741	
MW-49B	Radium-226	0.0807	±0.0927	0.149	

VALIDATION CRITERIA CHECK

					associated results were qualified as estimated (J v).

σ – Sigma
± – Plus or Minus
MDC – Minimum Detectable Concentration
pCi/L – Picocuries per Liter
J – Estimated Concentration
v – Compound Identification Issue

Refer to the Table of Qualified Analytical Results for a listing of the samples, analytes, and concentrations qualified (page 9).

7. Do the laboratory reports include only those constituents requested to be reported for a specific analytical method?	**X**	Yes		No	JH	Initials

Comments: Only the requested target analytes were reported.

8. Were sample holding times met?		Yes	**X**	No	JH	Initials

Comments: With the following exceptions, the sample preparation and analytical holding times were within the Method requirements.

Data Package 280-183794-2
Method 9056A - Anions

Samples MW-21B, MW-49B, MW-52B, MW-40B, MW-39B, MW-41B, MW-42B, MW-43B, MW-47B, MW-46B, MW-45B, MW-44B, MW-37B, MW-36B, Dup-01, and MW-32B were re-analyzed for fluoride 1-3 days outside of the 28-day method required holding time. The associated detected results were qualified as estimated (J- h), and the associated non-detected results were qualified as unusable (R h).

Samples MW-38C and MW-38B were re-analyzed at a dilution for sulfate 3 days outside of the 28-day method required holding time. The associated detected results were qualified as estimated (J- h).

Refer to the Table of Qualified Analytical Results for a listing of the samples, analytes, and concentrations qualified (page 9).

9. Were correct concentration units reported?	**X**	Yes		No	JH	Initials

Comments: Yes, the correct concentration units were reported.

10. Were the reporting requirements for flagged data met?	**X**	Yes		No	JH	Initials

Comments: Laboratory flags were reviewed and considered during the data validation procedure. Data validation qualifiers override assigned laboratory flags.

11. Were laboratory blank samples free of target analyte contamination?		Yes	**X**	No	JH	Initials

Comments: With the following exception, the laboratory blanks were free of target analyte contamination and radiological parameter results were less than the MDC.

Laboratory Blank/ Associated Samples	Analyte	Concentration	Qualification
Data Package 280-183794-2			
MB 280-633114/1-A MW-52B MW-40B MW-39B MW-41B MW-42B MW-43B MW-47B MW-46B MW-45B MW-44B MW-37B MW-36B Dup-01 MW-32B Field Blank	Calcium	391.0 µg/L	As the method blank concentration was ≥RL, and the associated sample results were reported at concentrations >10x the blank concentration, data qualification was not considered necessary.

≥ – Greater Than or Equal To
> - Greater Than
µg/L – Micrograms per Liter
MB – Method Blank

Refer to the Table of Qualified Analytical Results for a listing of the samples, analytes, and concentrations qualified (page 9).

VALIDATION CRITERIA CHECK

12. Were trip blank, field blank, and/or equipment rinse blank samples free of target analyte contamination?		Yes	**X**	No	JH	Initials

Comments: A trip blank and equipment blank were not required for this sampling event.

One field blank was collected, and with the exception noted below, the field blank was free of target analyte contamination and radiological parameter results were less than the MDC.

Field Blank/ Associated Samples	Analyte	Concentration	Qualification
Data Package 280-183794-1			
Field Blank All Samples	Combined Radium	0.968 ±0.405 pCi/L	The associated sample results reported at concentrations ≥MDC and <10x the blank concentration were qualified as estimate (J+ bf) to reflect the high bias indicated by the blank contamination.
	Radium-226	0.206 ±0.104 pCi/L	
	Radium-228	0.762 ±0.391 pCi/L	

≥ – Greater Than or Equal To
< - Less Than
bf – Field Blank Contamination
J+ - Estimated Concentration, High Bias
mDC – Minimum Detectable Concentration
pCi/L – Picocuries per Liter

Refer to the Table of Qualified Analytical Results for a listing of the samples, analytes, and concentrations qualified (page 9).

13. Were instrument calibrations within method or data validation control limits?	**NA**	Yes	**NA**	No	JH	Initials

Comments: Not applicable for the level of limited validation.

14. Were surrogate/tracer recoveries within control limits?	**X**	Yes		No	JH	Initials

Comments: The associated tracer recoveries were within control limits. Surrogate recoveries are not applicable for the analytical methods reported.

15. Were laboratory control sample recoveries and relative percent difference (RPDs) within control limits?	**X**	Yes		No	JH	Initials

Comments: LCS and/or LCSD percent recoveries and RPDs were within laboratory control limits.

16. Were matrix spike recoveries and RPDs within control limits?		Yes	**X**	No	JH	Initials

Comments: A matrix spike/matrix spike duplicate (MS/MSD) was performed on the following samples: MW-32B for total metals, chloride, fluoride, sulfate, radium-226, and radium-228, MW-38C for chloride, fluoride, sulfate, and MW-21B for fluoride. With the exceptions listed in the table below, the MS/MSD spike recoveries and RPDs were within laboratory control limits.

Associated Sample	Analyte	%R (Limits)	RPD (Limits)	Comment
Data Package 280-183794-2				
MW-32B	Arsenic	95/**91** (92-112)	5 (20)	As the potential bias was considered to be low, the associated sample results were qualified as estimated (UJ/J- m).
	Barium	97/**87** (92-117)	6 (20)	
	Cadmium	95/**88** (91-114)	7 (20)	
	Cobalt	**93/89** (94-115)	4 (20)	
	Chromium	92/**90** (91-114)	2 (20)	
	Lead	96/**90** (95-116)	6 (20)	
	Thallium	94/**90** (94-115)	4 (20)	
MW-38C (DL)	Sulfate	**279**/111 (80-120)	**55** (20)	As the potential bias was considered to be high, and the associated RPD was outside control limits, the associated detected sample result was qualified as estimated (J+ m,ld).
MW-21B	Fluoride	**74/79** (80-120)	6 (20)	As the potential bias was considered to be low, the associated detected sample result was qualified as estimated (J- m).

VALIDATION CRITERIA CHECK						
%R – Percent Recovery J- – Estimated Concentration, Biased Low J+ - Estimated Concentration, Biased High			m – Matrix spike/matrix spike duplicate recovery outlier RPD – Relative Percent Difference UJ – Estimated non detect			
Refer to the Table of Qualified Analytical Results for a listing of the samples, analytes, and concentrations qualified (page 9).						
17. Were laboratory duplicate RPDs and/or serial dilution %Ds within control limits?	**X**	Yes	**X**	No	JH	Initials
Comments: Laboratory duplicates were performed for anions and total dissolved solids analysis and met laboratory control limits. Serial dilutions were not evaluated for this level of limited validation.						
18. Were organic system performance criteria met?	**NA**	Yes	**NA**	No	JH	Initials
Comments: Not applicable for this level of limited validation, or for the methods reported.						
19. Were internal standards within method criteria for ICP-MS sample analyses?	**NA**	Yes	**NA**	No	JH	Initials
Comments: Not evaluated for this level of limited data validation.						
20. Were system performance criteria met?	**NA**	Yes	**NA**	No	JH	Initials
Comments: Not evaluated for this level of limited validation.						
21. Were field duplicates collected? If so, discuss the precision (RPD and/or RER) of the results.	**X**	Yes		No	JH	Initials
Duplicate Sample	Dup-01	Primary Sample		MW-36B		
Comments: The duplicate sample pair met the acceptance criteria. The following criteria was used to evaluate the field duplicate results: • For results where both reported values were greater than five times the reporting limit (RL), the relative percent difference (RPD) between the results were ≤30%. • For results where either value reported was less than five times the RL, the absolute difference between the results was compared to a criterion of agreement within ±2xRL. • The replicate error ratio (RER) for radiochemical parameters was ≤2.						
22. Were qualitative criteria for organic target analyte identification met?	**NA**	Yes	**NA**	No	JH	Initials
Comments: Not applicable for this level of limited data validation or for the methods reported.						
23. Were 10% of the EDD concentrations and reporting limits compared to the hardcopy data reports?	**X**	Yes		No	JH	Initials
Comments: During the validation procedure, 10% of the positive sample concentrations and RLs for project samples were compared to hardcopy laboratory reports.						

Table of Qualified Analytical Results
Basin Electric – Laramie, Wyoming
October 2023 Sampling

Flag Definitions

J – The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
J+ - The result is an estimated quantity, but the result may be biased high.
J- - The result is an estimated quantity, but the result may be biased low.
R – The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.
UJ – The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

Reason Code Definitions

bf – Field Blank Contamination
h – Holding Times
ld – Laboratory Duplicate Imprecision
m – Matrix Spike Recovery Outliers
v – Compound Identification Issue

80					95% USL	1.07					
81											
82					Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20.						
83					Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers						
84					and consists of observations collected from clean unimpacted locations.						
85					The use of USL tends to provide a balance between false positives and false negatives provided the data						
86					represents a background data set and when many onsite observations need to be compared with the BTV.

647												
648					Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20.							
649					Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers							
650					and consists of observations collected from clean unimpacted locations.							
651					The use of USL tends to provide a balance between false positives and false negatives provided the data							
652					represents a background data set and when many onsite observations need to be compared with the BTV.

218					Gamma ROS Statistics using Imputed Non-Detects							
219					GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs							
220					GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)							
221					For such situations, GROS method may yield incorrect values of UCLs and BTVs							
222					This is especially true when the sample size is small.							
223					For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Number of Distinct Detects	0	Number of Distinct Non-Detects	2
Minimum Detect	N/A	Minimum Non-Detect	0.001
Maximum Detect	N/A	Maximum Non-Detect	0.01
Variance Detected	N/A	Percent Non-Detects	100%
Mean Detected	N/A	SD Detected	N/A
Mean of Detected Logged Data	N/A	SD of Detected Logged Data	N/A

Warning: All observations are Non-Detects (NDs), therefore all statistics and estimates should also be NDs!

Specifically, sample mean, UCLs, UPLs, and other statistics are also NDs lying below the largest detection limit!

The Project Team may decide to use alternative site specific values to estimate environmental parameters (e.g., EPC, BTV).

The data set for variable Pb was not processed!

665												
666	Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20.											
667	Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers											
668	and consists of observations collected from clean unimpacted locations.											
669	The use of USL tends to provide a balance between false positives and false negatives provided the data											
670	represents a background data set and when many onsite observations need to be compared with the BTV.

913	DL/2 is not a Recommended Method. DL/2 provided for comparisons and historical reasons.										
914											
915	Nonparametric Distribution Free Background Statistics										
916	Data appear to follow a Discernible Distribution at 5% Significance Level										
917											
918	Nonparametric Upper Limits for BTVs(no distinction made between detects and nondetects)										
919	Order of Statistic, r				44	95% UTL with95% Coverage					0.05
920	Approx, f used to compute achieved CC				1.158	pproximate Actual Confidence Coefficient achieved by UTL					0.665
921	Approximate Sample Size needed to achieve specified CC				93	95% UPL					0.05
922	95% USL				0.05	95% KM Chebyshev UPL					0.0197
923											
924	Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20.										
925	Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers										
926	and consists of observations collected from clean unimpacted locations.										
927	The use of USL tends to provide a balance between false positives and false negatives provided the data										
928	represents a background data set and when many onsite observations need to be compared with the BTV.										
929

60												
61	Gamma ROS Statistics using Imputed Non-Detects											
62	GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs											
63	GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)											
64	For such situations, GROS method may yield incorrect values of UCLs and BTVs											
65	This is especially true when the sample size is small.											
66	For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

411	Data appear to follow a Discernible Distribution at 5% Significance Level											
412												
413	Nonparametric Upper Limits for BTVs(no distinction made between detects and nondetects)											
414	Order of Statistic, r				34	95% UTL with95% Coverage						1.33
415	Approx, f used to compute achieved CC				1.789	pproximate Actual Confidence Coefficient achieved by UTL						0.825
416	Approximate Sample Size needed to achieve specified CC				59	95% UPL						1.24
417	95% USL				1.33	95% KM Chebyshev UPL						1.98
418												
419	Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20.											
420	Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers											
421	and consists of observations collected from clean unimpacted locations.											
422	The use of USL tends to provide a balance between false positives and false negatives provided the data											
423	represents a background data set and when many onsite observations need to be compared with the BTV.

Sb

General Statistics

Total Number of Observations	30	Number of Missing Observations	4
Number of Distinct Observations	1		
Number of Detects	0	Number of Non-Detects	30
Number of Distinct Detects	0	Number of Distinct Non-Detects	1
Minimum Detect	N/A	Minimum Non-Detect	0.002
Maximum Detect	N/A	Maximum Non-Detect	0.002
Variance Detected	N/A	Percent Non-Detects	100%
Mean Detected	N/A	SD Detected	N/A
Mean of Detected Logged Data	N/A	SD of Detected Logged Data	N/A

Warning: All observations are Non-Detects (NDs), therefore all statistics and estimates should also be NDs!
Specifically, sample mean, UCLs, UPLs, and other statistics are also NDs lying below the largest detection limit!
The Project Team may decide to use alternative site specific values to estimate environmental parameters (e.g., EPC, BTV).

The data set for variable Sb was not processed!

973				95% USL		0.0106				95% KM Chebyshev UPL		0.0142
974												
975						Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20.						
976						Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers						
977						and consists of observations collected from clean unimpacted locations.						
978						The use of USL tends to provide a balance between false positives and false negatives provided the data						
979						represents a background data set and when many onsite observations need to be compared with the BTV.

361												
362	Nonparametric Upper Limits for BTVs(no distinction made between detects and nondetects)											
363	Order of Statistic, r					32	95% UTL with95% Coverage					1.19
364	Approx, f used to compute achieved CC					1.684	pproximate Actual Confidence Coefficient achieved by UTL					0.806
365	Approximate Sample Size needed to achieve specified CC					59	95% UPL					0.93
366	95% USL					1.19	95% KM Chebyshev UPL					1.174
367												
368	Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20.											
369	Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers											
370	and consists of observations collected from clean unimpacted locations.											
371	The use of USL tends to provide a balance between false positives and false negatives provided the data											

represents a background data set and when many onsite observations need to be compared with the BTV.

693	The following statistics are computed using gamma distribution and KM estimates											
694	Upper Limits using Wilson Hilferty (WH) and Hawkins Wixley (HW) Methods											
695					WH	HW				WH	HW	
696	95% Approx. Gamma UTL with 95% Coverage				1.357	1.372	95% Approx. Gamma UPL			1.176	1.181	
697	95% KM Gamma Percentile				1.147	1.152	95% Gamma USL			1.611	1.646	
698												
699	Lognormal GOF Test on Detected Observations Only											
700	Shapiro Wilk Test Statistic				0.947		Shapiro Wilk GOF Test					
701	5% Shapiro Wilk Critical Value				0.914		Detected Data appear Lognormal at 5% Significance Level					
702	Lilliefors Test Statistic				0.137		Lilliefors GOF Test					
703	5% Lilliefors Critical Value				0.18		Detected Data appear Lognormal at 5% Significance Level					
704	Detected Data appear Lognormal at 5% Significance Level											
705												
706	Background Lognormal ROS Statistics Assuming Lognormal Distribution Using Imputed Non-Detects											
707	Mean in Original Scale				0.677		Mean in Log Scale				-0.46	
708	SD in Original Scale				0.283		SD in Log Scale				0.372	
709	95% UTL95% Coverage				1.424		95% BCA UTL95% Coverage				1.76	
710	95% Bootstrap (%) UTL95% Coverage				1.76		95% UPL (t)				1.198	
711	90% Percentile (z)				1.017		95% Percentile (z)				1.164	
712	99% Percentile (z)				1.501		95% USL				1.772	
713												
714	Statistics using KM estimates on Logged Data and Assuming Lognormal Distribution											
715	KM Mean of Logged Data				-0.463		95% KM UTL (Lognormal)95% Coverage				1.436	
716	KM SD of Logged Data				0.377		95% KM UPL (Lognormal)				1.205	
717	95% KM Percentile Lognormal (z)				1.171		95% KM USL (Lognormal)				1.792	
718												
719	Background DL/2 Statistics Assuming Lognormal Distribution											
720	Mean in Original Scale				0.634		Mean in Log Scale				-0.589	
721	SD in Original Scale				0.327		SD in Log Scale				0.545	
722	95% UTL95% Coverage				1.825		95% UPL (t)				1.417	
723	90% Percentile (z)				1.115		95% Percentile (z)				1.359	
724	99% Percentile (z)				1.97		95% USL				2.512	
725	DL/2 is not a Recommended Method. DL/2 provided for comparisons and historical reasons.											
726												
727	Nonparametric Distribution Free Background Statistics											
728	Data appear to follow a Discernible Distribution at 5% Significance Level											
729												
730	Nonparametric Upper Limits for BTVs(no distinction made between detects and nondetects)											
731	Order of Statistic, r				32		95% UTL with95% Coverage				1.76	
732	Approx, f used to compute achieved CC				1.684		pproximate Actual Confidence Coefficient achieved by UTL				0.806	
733	Approximate Sample Size needed to achieve specified CC				59		95% UPL				1.396	
734	95% USL				1.76		95% KM Chebyshev UPL				1.928	
735												
736	Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20.											
737	Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers											
738	and consists of observations collected from clean unimpacted locations.											
739	The use of USL tends to provide a balance between false positives and false negatives provided the data											
740	represents a background data set and when many onsite observations need to be compared with the BTV.
