SSL	statistically significant levels
TDS	total dissolved solids
UPL	upper prediction limit
U.S.	United States

Executive Summary

This report summarizes groundwater monitoring and corrective action activities completed between January 1 and December 31, 2024 for the coal combustion residuals (CCR) units at the Basin Electric Power Cooperative (Basin) Laramie River Station (LRS), as required by 40 Code of Federal Regulations (CFR) § 257.90(e) of the United States (U.S.) Environmental Protection Agency CCR rule. The CCR units subject to the rule include:

- Bottom Ash Pond 1;
- Bottom Ash Pond 2/Bottom Ash Pond 3/Ash Landfill Multi-unit; and
- Emergency Holding Ponds Multi-unit.

Site figures illustrating the location of the CCR units and program monitoring networks for the CCR units are presented as **Figures 1** and **2**, respectively. During the reporting period, monitoring well MW-53B was abandoned and replaced with MW-53BR, this was the only change to the program monitoring wells during the reporting period.

Basin implemented an Assessment monitoring program for Bottom Ash Pond 1 and the two CCR multi-units (Bottom Ash Pond 2/Bottom Ash Pond 3/Ash Landfill and Emergency Holding Ponds) in the spring of 2018, in response to the identification of statistically significant increases (SSIs) of Appendix III constituents in downgradient monitoring wells. Assessment monitoring was in place for all three units/multi-units at the start and end of the current annual reporting period (2024).

Assessment monitoring of the Bottom Ash Pond 2/Bottom Ash Pond 3/Ash Landfill Multi-unit in 2024 found that concentrations of two Appendix III constituents (calcium and fluoride), and nine Appendix IV constituents (arsenic, barium, chromium, cobalt, fluoride, lead, molybdenum, radium 226/228 combined, and selenium) exhibited SSIs above background values at select monitoring wells. No SSIs identified at the Bottom Ash Pond 2/Bottom Ash Pond 3/Ash Landfill Multi-unit exceeded groundwater protection standards (GWPSs).

Assessment monitoring of the Emergency Holding Ponds Multi-unit in 2024 found that concentrations of one Appendix III constituent (fluoride), and three Appendix IV constituents (barium, chromium, and fluoride) exhibited SSIs above the background values at select monitoring wells. No SSIs identified at the Emergency Holding Ponds Multi-unit exceeded GWPSs.

Assessment monitoring of the Bottom Ash Pond 1 Unit found that concentrations of five Appendix III constituents (boron, calcium, chloride, sulfate, and total dissolved solids [TDS]) and four Appendix IV constituents (chromium, lithium, molybdenum, and selenium) exhibited SSIs above background levels at select monitoring wells. Lithium at monitoring wells MW-38B and MW-21B and molybdenum at monitoring well MW-38B additionally exceeded GWPSs. Downgradient well(s) with a constituent or constituents reported above GWPSs at a statistically significant level (SSL) are as follows:

Appendix IV Constituent	Unit/Multi-Unit	Downgradient Well(s) GWPS SSL Exceedance
Lithium and molybdenum	Bottom Ash Pond 1	MW-38B

For context, previously as required by the CCR rule, an assessment of corrective measures (ACM) was conducted and a public meeting open to interested and affected parties was held on January 30, 2020 to discuss the results of the ACM. After completion of the ACM, work was initiated on the Selection of Remedy for the impacted groundwater as required by 40 CFR § 257.97. A Groundwater Remedy Selection Report was prepared and issued in July 2020 (AECOM Technical Services, Inc. [AECOM] 2020), after which work was initiated on the design and implementation of the following selected remedy:

- Bottom Ash Pond 1 retrofit, hydraulic capture of impacted groundwater, and treatment of the captured groundwater in the new zero-discharge Pond 1.

Cleanout and retrofit of Bottom Ash Pond 1, which essentially eliminated the source of impact to groundwater was completed in March 2021. Installation and hydraulic testing of extraction wells for the hydraulic capture system was

completed in December 2021. The hydraulic capture pumping system was designed in 2022 and contracting for installation of the system was initiated in 2022. Installation of the pumping system began in summer 2023 and initiation of pumping on a continual basis began on July 24, 2024, once final system components were installed.

Other activities and conditions for the 2024 annual reporting period include:

- Semiannual Assessment-mode groundwater monitoring events were conducted in June and September. Monitoring involved sampling of background monitoring wells and downgradient monitoring wells.
- MW-53B was plugged and abandoned (due to screen failure/siltation) and replaced with MW-53BR (immediately adjacent to prior well).
- No program transitions (Detection to Assessment or vice versa) were triggered.
- The LRS CCR Groundwater Monitoring System Report, Revision 1 was drafted (finalized in January 2025).

Anticipated activities for the next annual reporting period include:

- Completion of two semi-annual Assessment-mode groundwater monitoring events.
- Statistical evaluation of groundwater data for Appendix III and Appendix IV constituents.
- Performance monitoring of the selected remedy.

1 Introduction

On behalf of Basin Electric Power Cooperative (Basin), AECOM Technical Services, Inc. (AECOM) has prepared this 2024 annual report documenting groundwater monitoring and corrective action for the coal combustion residuals (CCR) units at Basin's Laramie River Station (LRS).

Section 1 provides background information on the LRS power generating facility, its CCR unit(s) and their physical setting, including geology, hydrology, and groundwater conditions. Section 2 summarizes CCR groundwater monitoring activities conducted prior to 2024. Section 3 summarizes the groundwater monitoring and corrective action activities completed in 2024, and references attachments to this report that contain detailed documentation of those activities. Section 4 provides some general information regarding the LRS CCR program and actions planned for 2025. Section 5 presents a summary and conclusions from CCR groundwater monitoring in 2024 and statistical analysis of the results. Section 6 lists references cited in this report.

1.1 Regulatory Background

The CCR rule (Chapter 40 of the Code of Federal Regulations [CFR] Part 257 Subpart D) became effective on October 19, 2015 and established standards for the disposal of CCR in landfills and surface impoundments (CCR units). In particular, the rule set forth groundwater monitoring and corrective action requirements for CCR units. The rule includes the requirement for an "annual groundwater monitoring and corrective action report" (annual report), with the annual report for 2024 due by January 31, 2025. The annual report is intended to document the status of the groundwater monitoring and corrective action program for each CCR unit, summarize key actions completed in the previous year, and project key activities for the upcoming year. This report is the eighth annual report for LRS and reports on activities performed and data gathered in calendar year 2024.

1.2 Facility Location and Operational History

LRS, located east of Wheatland, Wyoming (**Figure 1**), is one of the largest consumer-operated, regional, joint power supply ventures in the United States (U.S.). The plant consists of three power-generating units with a total power output capacity of 1,710 megawatts:

- Unit 1, with a rating of 570 megawatts, which began operating in 1980;
- Unit 2, with a rating of 570 net megawatts, which began operating in 1981; and
- Unit 3, with a rating of 570 net megawatts, which began operating in 1982.

CCR produced at LRS includes fly ash, bottom ash, and flue gas desulfurization waste.

1.3 CCR Unit Description

CCR is disposed at LRS in the following CCR units, monitored as individual units or multi-units:

- Bottom Ash Pond 1;
- Bottom Ash Pond 2/Bottom Ash Pond 3/Ash Landfill (multi-unit); and
- Emergency Holding Ponds (multi-unit).

The Ash Landfill and three bottom ash ponds are located near the western edge of the site, west of the LRS generating units and office complex (**Figure 2**). The two emergency holding ponds are located north of the generating units in the northeastern part of the site. The landfill and ash ponds were permitted in 1978 and began receiving coal ash in 1980. The emergency holding ponds were identified as CCR units due to periodic disposal of flue gas desulfurization waste in the ponds.

1.4 Physical Setting

The geological and hydrogeological setting is important to understanding the groundwater environment in the vicinity of the LRS. The geologic history of Platte County, Wyoming is similar to most areas within the Front Range of the Rocky Mountains. Platte County is underlain by marine and continental deposits of limestone, conglomerate, sandstone, siltstone, shale, and unconsolidated sediments. Deposits range in thickness up to 10,000 feet (ft) in the east central and southeastern parts of the county. Precambrian rocks generally make up the mountainous areas, Paleozoic and Mesozoic rocks adjoin the older formations, and Tertiary and Quaternary period rocks underlie most of the county east of the Laramie Range (U.S. Geological Survey [USGS] 1960). The Laramide Orogeny was a period of mountain building active in the county approximately 70 million years ago marking the beginning of the Laramie Range and the Hartville Uplift, a structural divide separating the southern Powder River Basin from the northern Denver Basin. During the Cenozoic Era, streams eroded the eastern side of the range depositing silts, sands, and gravels of the Brule and Arikaree Formations that underlie the Wheatland area, including LRS.

Precipitation landing on the eastern flank of the Laramie Range supplies surface water to perennial and ephemeral streams that flow east towards the basin. Most surface water west of Wheatland eventually joins with the Laramie River, continuing east before discharging into the Platte River near Fort Laramie. Groundwater near Wheatland is recharged primarily through infiltration of rain and melt water on the eastern flank of the Laramie Range and through infiltration of irrigation water during the spring, summer, and fall months. Some groundwater in the saturated zones eventually returns to the land surface through seeps and springs, or is discharged by wells and evapotranspiration; however, the majority flows into surface streams. Alluvial drainages bounding the eastern (Wheatland Creek) and western portions (Chugwater Creek) of the facility generally transport surface water northward, discharging to the Laramie River (USGS 1960). Some groundwater within these regions percolates into the Arikaree Formation, which holds the uppermost aquifer beneath the LRS facility.

The LRS facility is underlain by a 5 to 30 ft thick section of Quaternary sediments that overlie the Arikaree Formation. The Arikaree Formation is comprised primarily of loosely to moderately cemented very-fine to fine-grained sandstone with interbedded silts and clays. A lower unit consists of lenses of loose- to well-cemented, red to gray coarse sandstone interbedded with lenses of well-cemented conglomerate. A basal conglomerate lies unconformably upon the underlying Brule Formation in many places throughout Platte County (USGS 1960). A review of the geologic logs generated during the drilling of the on-site water supply well (Forell-Baumgardner No. 2) suggests the Brule Formation is approximately 820 ft below ground surface (bgs) in the western portions of the facility. Based on this information, the local thickness of the Arikaree Formation on-site is approximately 790 ft thick.

The lithologic characteristics of the Arikaree Formation beneath the LRS are generally consistent, although there are slight differences in the degree of cementation and in duration, and minor variations in grain size. Few fractures were noted in borehole soil cores obtained during monitoring well network installation. Interbeds with higher silt and clay content, coupled with greater cementation, generate thin discontinuous perched groundwater horizons that are interpreted to hold only seasonal groundwater. The perched groundwater would tend to percolate downward to what is interpreted as the uppermost aquifer based on data obtained during monitoring well installation and aquifer testing. The uppermost aquifer is present at a depth of approximately 95 ft bgs in the southwestern portion of the facility, and slopes generally north towards the Laramie River. The hydraulic gradient for the uppermost aquifer beneath the facility appears to be controlled dominantly through topographic features and enhanced infiltration zones in permeable shallow alluvium. A representative potentiometric surface map from the most recent Assessment monitoring event conducted in September 2024 is presented in **Attachment A**. Data from aquifer pumping tests conducted at the facility in 2016 were used to estimate hydraulic conductivities, which range from 0.65 ft per day (ft/day) to 3.12 ft/day, with an average of 1.40 ft/day. Aquifer slug tests were also performed on eight other wells, with resulting hydraulic conductivities ranging from 0.45 ft/day to 6.28 ft/day, with an average of 2.16 ft/day.

2 CCR Groundwater Monitoring Activities Prior to 2024

The regulatory process for CCR groundwater monitoring and corrective action is established by 40 CFR § 257.90 through 257.98. The process includes a phased approach to groundwater monitoring, leading (if applicable) to the establishment of groundwater protection standards (GWPSs) for each CCR unit. Exceedances of the GWPSs that are determined to be statistically significant can trigger requirements for additional groundwater characterization and corrective action assessment, followed by corrective action implementation.

The following paragraphs provide a summary of CCR groundwater monitoring activities performed prior to 2024. CCR groundwater monitoring activities performed in 2024 are discussed in Section 3.

Groundwater monitoring at LRS is performed using a network of monitoring wells that includes wells to monitor background water quality that is not potentially influenced by the presence of the CCR unit, and wells placed at the downgradient boundary of the CCR units (**Figure 2**). The hydro stratigraphic positions of the CCR monitoring wells selected for sampling background and downgradient groundwater quality for each LRS CCR unit or multi-unit prior to 2024 are summarized below:

CCR Unit/multi-Unit	Background Wells	Downgradient Wells
Bottom Ash Pond 1	MW-52B, MW-53BR	MW-49B, MW-21B, MW-38B, MW-38C
Bottom Ash Pond 2/Bottom Ash Pond 3/Ash Landfill	MW-39B, MW-32B	MW-36B, MW-37B, MW-20B, MW-14BR, MW-40B, MW-52B, MW-53BR
Emergency Holding Ponds	MW-41B, MW-42B, MW-43B	MW-44B, MW-45B, MW-46B, MW-47B

The following monitoring wells were also included in the CCR monitoring network for the purpose of measuring groundwater elevations and evaluating groundwater flow direction and velocity in the vicinity of the bottom ash ponds and landfill: MW-33B, MW-34B, MW-35B, MW-48B, MW-50B, MW-51B, MW-54B, MW-55B, and MW-56B.

2.1 Baseline Detection Monitoring (2016-17)

Detection monitoring was initiated in August 2016, which involved sampling groundwater for Part 257 Appendix III and Appendix IV constituents over eight baseline Detection monitoring events.

Baseline Detection monitoring events were performed in general accordance with procedures established in the site-specific Sampling and Analysis Plan (AECOM 2018a), which is included in the facility's Operating Record. The Sampling and Analysis Plan describes the procedures for equipment calibration, monitoring well water level measurement, monitoring well purging and sampling, sample custody, sample shipping, laboratory analysis, and documentation requirements for each groundwater sample submitted. The results of detection monitoring at LRS were presented and discussed in the First Annual Groundwater Monitoring and Corrective Action Report, 2016-2017 (AECOM 2018b).

2.2 Initial Assessment Monitoring (2018)

If a statistically significant increase (SSI) of any Appendix III constituent relative to background conditions was detected in the downgradient monitoring wells and could not be demonstrated to be associated with a source other than the CCR unit, then the CCR rule required that groundwater monitoring transition from the Detection monitoring phase to the Assessment monitoring phase. The results of the Baseline Detection monitoring (2016–2017) identified the following Appendix III SSIs:

- Bottom Ash Pond 1 SSIs – boron, calcium, chloride, sulfate, and total dissolved solids (TDS);
- Bottom Ash Pond 2/Bottom Ash Pond 3/Ash Landfill SSIs – fluoride and chloride; and

- Emergency Holding Ponds SSI – fluoride.

In response to SSIs identified during Detection monitoring, Basin implemented an Assessment monitoring program for the two CCR multi-units (Bottom Ash Pond 2/Bottom Ash Pond 3/Ash Landfill and Emergency Holding Ponds) in the spring of 2018. The initial Assessment monitoring event for the two multi-units was conducted in April 2018 and included analysis of groundwater samples for constituents listed in Part 257 Appendix IV. Also in the spring of 2018, Basin elected to conduct an alternative source demonstration (ASD) investigation to evaluate whether an alternative source could explain the SSIs identified for Bottom Ash Pond 1 during Detection monitoring. This ASD investigation involved the following activities:

- Analyzing soil samples collected from shallow soil borings at 10 locations near Bottom Ash Pond 1; and
- Performing groundwater modeling to evaluate potential constituent migration pathways and transport times from potential source areas to one of the downgradient wells for Bottom Ash Pond 1.

The ASD investigation could not confirm an alternative source; therefore, Basin initiated an Assessment monitoring program for Bottom Ash Pond 1 and completed the initial Assessment monitoring event in June 2018, which included analysis of groundwater samples for constituents listed in Part 257 Appendix IV.

The following Appendix IV constituents were detected during the initial Assessment monitoring of the CCR multi-units: barium, chromium, fluoride, lithium, molybdenum, radium-226 and -228 (combined), and selenium (April 2018). The Appendix IV constituents detected during initial Assessment monitoring of Bottom Ash Pond 1 included barium, chromium, cobalt, fluoride, lithium, molybdenum, and selenium (June 2018).

Because one or more Appendix IV constituents were detected during the initial Assessment monitoring events for all three CCR units/multi-units at LRS, the CCR rule required that a second verification Assessment monitoring event be performed for each unit/multi-unit. Verification Assessment monitoring was performed in June 2018 for the two multi-units and in October 2018 for Bottom Ash Pond 1. Verification monitoring for each unit/multi-unit involved analysis for Appendix III constituents plus the Appendix IV constituents detected during initial Assessment monitoring.

The results of Assessment monitoring conducted in 2018 were presented in the 2018 Annual Groundwater Monitoring and Corrective Action Report (AECOM 2019a).

2.3 Additional Groundwater Characterization (2019)

The CCR rule requires that concentrations of Appendix III and Appendix IV constituents detected in downgradient wells during Assessment monitoring be compared to background concentrations using the statistical procedures in 40 CFR § 257.93(g). The rule also requires the establishment of GWPSs in accordance with 40 CFR § 257.95(h) for each Appendix IV constituent detected in downgradient wells during Assessment monitoring. If a GWPS is exceeded in one or more downgradient wells at statistically significant levels (SSLs), the rule requires additional groundwater characterization and an ACM, unless the SSLs can be attributed to a source other than the CCR unit or to an error in sampling, statistical evaluation, or natural variation in groundwater quality.

Assessment monitoring of Bottom Ash Pond 1 found that lithium and molybdenum concentrations in monitoring well MW-38B exceeded GWPSs at SSLs. Although selenium concentrations in monitoring wells MW-21B and MW-38B exceeded the GWPS by direct comparison, their 95 percent lower confidence limit (95% LCL) did not exceed the GWPS. Basin concluded the available data indicated that the SSLs associated with Bottom Ash Pond 1 could not be attributed to a source other than the CCR unit or to errors in sampling, statistical evaluation, or natural variation in groundwater quality. Therefore, Basin performed additional groundwater characterization and an ACM for Bottom Ash Pond 1. Additional groundwater characterization activities were performed in the spring of 2019 to evaluate the nature and extent of groundwater impacted by a release of CCR from Bottom Ash Pond 1 that has resulted in the exceedance of GWPSs for lithium and molybdenum. The characterization activities were designed to also support selection and implementation of a remedy to attain GWPSs. The activities involved installation and sampling of four monitoring wells (MW-38C, MW-54B, MW-55B, MW-56B) downgradient of Bottom Ash Pond 1 at the locations illustrated in **Figure 2**:

- MW-38C was installed near MW-38B to evaluate the vertical extent of groundwater impacts near MW-38B. The total depth of MW-38C was 130 ft bgs.
- MW-54B was installed to evaluate groundwater quality of the uppermost aquifer at the facility boundary. The total depth of MW-54B was 25 ft bgs.
- MW-55B was installed northeast of MW-21B to evaluate the downgradient extent of groundwater impacts north of MW-38B. The total depth of MW-55B was 70 ft bgs.
- MW-56B was installed east of MW-21B to evaluate the lateral extent of groundwater impacts northeast of MW-38B. The total depth of MW-56B was 79 ft bgs.

Groundwater samples from the four wells were analyzed for Appendix III parameters and the following Appendix IV parameters: barium, chromium, cobalt, fluoride, lithium, molybdenum, and selenium; and the geochemical parameters alkalinity, magnesium, and sodium. None of the 2019 results exceeded the GWPSs for lithium, molybdenum, or the other Appendix IV constituents detected during Assessment monitoring in 2018. These results, combined with results from past Assessment monitoring, reasonably defined the extent of groundwater impacted by lithium and molybdenum attributed to Bottom Ash Pond 1. The data suggest that the horizontal extent of groundwater with lithium and molybdenum concentrations exceeding GWPSs extends from Bottom Ash Pond 1 downgradient to MW-38B, but not as far as MW-55B or MW-56B. Similarly, the vertical extent of groundwater exceeding GWPSs extends from the surface of the uppermost aquifer at MW-38B to possibly below the bottom of the screened interval of MW-38B (75 ft bgs), but not as deep as the screened interval of MW-38C (114 ft bgs to 125 ft bgs). Overall, the data enhanced understanding of relevant site conditions, assisted in selecting a remedy, and will be useful for remedy design and implementation.

2.4 Assessment of Corrective Measures (ACM) (2019-2020)

Groundwater Assessment monitoring of Bottom Ash Pond 1 identified lithium and molybdenum at SSLs above GWPSs. The exceedance of GWPSs triggered requirements for the assessment, selection, and implementation of corrective measures to prevent further releases of hazardous constituents, remediate any releases, and restore the affected area. Basin completed an ACM in 2019 (AECOM 2019b). The ACM focused on identifying and evaluating groundwater corrective measures to address the dissolved lithium and molybdenum in groundwater downgradient of Bottom Ash Pond 1.

Potentially applicable corrective measures were identified based on the nature and extent of groundwater impacts and site-specific geological and hydrogeological characteristics. Screening was performed by evaluating each corrective measure against the criteria of effectiveness, technical implementability, and relative cost. Those that were deemed ineffective and/or had significant implementation concerns were rejected from further consideration. Natural attenuation, groundwater extraction, and long-term monitoring passed the screening step and were assembled into the following two corrective measures alternatives for further detailed evaluation:

- Alternative A: Natural Attenuation and Long-Term Monitoring; and
- Alternative B: Groundwater Extraction, On-site Reuse or Disposal, and Long-Term Monitoring.

The two alternatives were evaluated against the requirements specified in 40 CFR § 257.96 and § 257.97, broadly categorized under the criterion of effectiveness, implementability, and cost. The results of the ACMs, including an evaluation of the two alternatives, are presented in the ACMs (AECOM 2019b). The two alternatives were presented at a public meeting held on January 30, 2020 in Wheatland, Wyoming. A 30-day public comment period started on January 30, 2020 and ended on February 29, 2020. No comments were received during the 30-day period following the public meeting.

2.5 Selection of Remedy and Remedy Implementation (2020-2021)

Following the ACM public meeting, Basin elected to implement Alternative B: Retrofit of Bottom Ash Pond 1, Groundwater Extraction, On-site Reuse or Disposal, and Long-Term Monitoring to meet the remedy requirements of the CCR rule. The Groundwater Remedy Selection Report was certified and issued in July 2020 (AECOM 2020). Basin

subsequently initiated remedial design activities within 90 days of remedy selection in accordance with 40 CFR § 257.97.

- The first step in the selected alternative involves the removal of all CCR from Bottom Ash Pond 1 and the placement of a liner system before returning it to service as a CCR unit. The retrofit was initiated in August 2020 and completed in March 2021.
- The second step involves the use of proven, reliable groundwater pumping technology to intercept impacted groundwater and route it back to the retrofitted Bottom Ash Pond 1. Design of this step was initiated in November 2020 and was completed in spring 2022. The following steps were completed in 2021:
 - Installation of two 6-inch recovery wells to a total depth of approximately 80 ft bgs occurred in November 2021.
 - Recovery well development and aquifer testing of the recovery wells occurred in December 2021.

2.6 Semi-annual Assessment Monitoring (2019-2023)

Assessment monitoring in 2018 of the Bottom Ash Pond 2/Bottom Ash Pond 3/Ash Landfill multi-unit found that concentrations of Appendix IV constituents chromium, fluoride, and selenium exhibited SSIs above background values, but all concentrations were below GWPSs. Therefore, Assessment monitoring of this multi-unit is required on a semi-annual basis per the requirements of 40 CFR § 257.95. Assessment monitoring of the Emergency Holding Ponds multi-unit found that Appendix IV constituents chromium, fluoride, and selenium exhibited SSIs above background values but below GWPSs. Therefore, semi-annual Assessment monitoring of this multi-unit is also required. The results of semi-annual Assessment monitoring subsequently completed in 2024 are discussed in Section 3.

The first of two semi-annual Assessment monitoring events for 2019 occurred on June 4-6, 2019. The field activities and resulting data were summarized in the Sampling and Analysis Report, Assessment Monitoring, June 2019 (AECOM 2019c). The second semi-annual Assessment monitoring event for 2019 occurred on October 21-23, 2019. The field activities and data were summarized in the Sampling and Analysis Report, Assessment Monitoring, October 2019 (AECOM 2019d).

Semi-annual Assessment monitoring events for 2020, 2021, 2022, and 2023 occurred in June and October of each year. The field activities and resulting data were summarized in the 2020 Annual Groundwater Monitoring and Corrective Action Report, the 2021 Annual Groundwater Monitoring Corrective Action Report, the 2022 Annual Groundwater Monitoring Corrective Action Report, and the 2023 Annual Groundwater Monitoring Corrective Action Report (AECOM 2021, 2022, 2023,2024).

3 CCR Groundwater Monitoring and Corrective Action Activities in 2024

This section summarizes the activities conducted at LRS in 2024 to comply with the groundwater requirements of the CCR rule:

- Groundwater Assessment monitoring activities for all CCR units:
 - monitoring system evaluation;
 - groundwater sampling;
 - laboratory analysis; and
 - statistical analysis of the monitoring results.
- Replacement of monitoring well MW-53B with MW-53BR (immediately adjacent to prior well) and subsequent plugging and abandonment of MW-53B.
- Surface completion modifications (extending up) for monitoring wells MW-50B, MW-51B, MW-52B.
- Update of the CCR Groundwater Monitoring System Report to include replacement monitoring well MW-53BR and updated top of casing elevation information for monitoring wells with modified surface completions.
- Groundwater Corrective Action
 - A Groundwater Extraction System was designed for Bottom Ash Pond 1, was partially installed in 2023, final installation was completed in July 2024, and operation began on July 24, 2024.

Further details concerning each of these activities, including brief discussion of work completed during the reporting period are provided below.

3.1 Assessment Monitoring Activities

3.1.1 Monitoring System Evaluation

As described in the CCR Groundwater Monitoring System Report (AECOM 2017), monitoring wells were installed around the CCR unit/multi-units at LRS to: (1) facilitate collection of representative groundwater samples from the uppermost aquifer; and (2) accurately measure water table elevations to support evaluation of groundwater gradient and flow direction. All monitoring wells comprising the LRS CCR monitoring system with the exception of well MW-53B, which was abandoned and replaced with MW-53BR, were found to be in good condition during the assessment monitoring events conducted in 2024. Surface completions for monitoring wells MW-50B, MW-51B, and MW-52B were also modified by removing the concrete flush mount completion, adding a segment to the polyvinyl chloride riser pipe, and installing a new flush mount surface competition. This work was done to bring the monitoring well surface completion up to be flush with the grade of the road that was raised during Pond 3 retrofit activities. The CCR Groundwater Monitoring System Report (Revision 1) for the site was updated to include the well network updates with MW-53BR, MW-50B, MW-51B, and MW-52B. Updates to the system report were made in 2024 and the report was finalized and posted to the public record in January 2025.

Following additional groundwater characterization of Bottom Ash Pond 1 in the spring of 2019, Basin elected to incorporate the four newly installed monitoring wells (MW-38C, MW-54B, MW-55B, and MW-56B) into the Assessment monitoring program, which continued into 2024. Water level measurements and groundwater quality samples were collected from MW-38C during the June and September 2024 Assessment monitoring events. Water level measurements were only taken at MW-54B, MW-55B, and MW-56B in 2024.

Potentiometric surface maps constructed using the depth-to-groundwater measurements obtained at the beginning of each event are presented in **Attachment A**. The direction of groundwater flow in both 2024 events is generally to the

northeast, consistent with previous data collected during detection and assessment monitoring from 2016 through 2023, and supports the design of the well network (**Figure 2**) to monitor background groundwater quality and the quality of groundwater downgradient of the CCR units.

3.1.2 Groundwater Sampling and Analysis

Groundwater Assessment monitoring was performed at LRS in June and September 2024 for the three CCR unit/multi-units. Monitoring activities included collecting groundwater samples from the wells listed below:

CCR Unit/Multi-unit	Background Wells	Downgradient Wells
Bottom Ash Pond 1	MW-52B, MW-53BR	MW-21B, MW-38B, MW-38C*, MW-49B
Bottom Ash Pond 2/Bottom Ash Pond 3/Ash Landfill (multi-unit)	MW-39B, MW-32B	MW-36B, MW-37B, MW-20B, MW-14BR, MW-40B, MW-52B, MW-53BR
Emergency Holding Ponds (multi-unit)	MW-41B, MW-42B, MW-43B	MW-44B, MW-45B, MW-46B, MW-47B

* MW-38C, installed in April 2019, was added to the assessment monitoring program as a downgradient compliance well for Bottom Ash Pond 1.

Water levels were also measured in the following monitoring wells for the purpose of evaluating groundwater flow direction and velocity:

- MW-33B, MW-34B, MW-35B, MW-48B, MW-50B, MW-51B, MW-54B, MW-55B, and MW-56B. Assessment monitoring sampling and analysis was performed in general accordance with procedures established in the Sampling and Analysis Plan (AECOM 2018a). The results are presented in **Attachment A**, which also includes representative potentiometric surface maps for the uppermost aquifer, inferred groundwater flow directions and estimated velocities, and a tabulated summary of field measurements and laboratory analytical data.

3.2 Statistical Procedures and Analysis

The CCR rule requires that concentrations of Appendix III and Appendix IV constituents detected in downgradient wells during Assessment monitoring be compared to background concentrations using the statistical procedures in 40 CFR § 257.93(g). The rule also requires the establishment of GWPSs for each Appendix IV constituent detected in downgradient wells during Assessment monitoring. The detected concentrations are then compared to the GWPSs for each constituent, which are either:

- The federal Safe Drinking Water Act maximum contaminant level;
- Concentrations for cobalt, lead, lithium, and molybdenum specified in 40 CFR § 257.95(h)(2); or
- The background concentration (upper prediction limit [UPL]) if it is higher than the maximum contaminant level or concentration specified in 40 CFR § 257.95(h)(2).

The statistical analysis procedures and results from 2024 Assessment monitoring for each LRS CCR unit/multi-unit are discussed below. Input and output data files for calculating the UPLs and lower prediction limits for the LRS multi-units are provided in **Attachment B**.

3.3 Bottom Ash Pond 1

Appendix III and Appendix IV groundwater quality data from Bottom Ash Pond 1 Assessment monitoring were evaluated using an interwell approach that statistically compared constituent concentrations at downgradient monitoring wells to those present at background monitoring wells. The statistical analyses were performed in accordance with the Statistical Method Certification and Statistical Methodology presented in the CCR Groundwater Monitoring System Report (AECOM 2017).

Prediction limits (i.e., parametric or nonparametric) were developed for each constituent based on the frequency of non-detect values and whether the background data for that constituent exhibited a normal, lognormal, or nonparametric distribution. For the statistical analysis, non-detect values were represented as one-half the detection limit. No outliers were identified in the background data. Analytical data from the background monitoring wells were used to develop an UPL for the Appendix III and Appendix IV background data at 95% confidence or better. Data from each downgradient compliance monitoring well were compared to the UPL to identify SSIs over background. Mann-Kendall trend analysis was used to identify trends for constituents with SSIs. Constituents exhibiting an SSI over the background UPL were further evaluated to determine whether they are present at SSLs relative to GWPS established under 40 CFR § 257.95(d)(2). SSLs were identified by calculating the 95% LCL for the constituents exhibiting SSIs over background at the downgradient compliance wells at each CCR unit and comparing the 95% LCL to the established GWPS. A constituent is present at an SSL above the GWPS if the 95% LCL is greater than the GWPS.

Table 1 summarizes the statistically determined background UPLs of each Appendix III and Appendix IV constituent for Bottom Ash Pond 1. **Table 1** also identifies applicable Appendix IV GWPSs, whether each Appendix IV constituent concentration measured in the downgradient wells exceeds the GWPS by direct comparison, and if constituent concentrations are present at an SSL above the GWPS. Assessment monitoring of Bottom Ash Pond 1 in 2024 found that lithium and molybdenum at monitoring well MW-38B exceeded their respective GWPSs at an SSL. Appendix IV SSIs were also observed in MW-21B for lithium, molybdenum, and selenium, and in monitoring well MW-38B for chromium. In these instances, the SSIs did not exceed the GWPS at an SSL because the 95% LCL did not exceed the GWPS. Assessment monitoring of this CCR unit will continue on a semi-annual basis per the requirements of 40 CFR § 257.95.

3.4 Bottom Ash Pond 2/Bottom Ash Pond 3/Ash Landfill Multi-unit

Statistical analyses of Appendix III and Appendix IV groundwater quality data for the Bottom Ash Pond 2/Bottom Ash Pond 3/Ash Landfill multi-unit were performed in a manner similar to that described above for Bottom Ash Pond 1. **Table 2** summarizes the statistically determined background UPLs of each Appendix III and Appendix IV constituent for the Bottom Ash Pond 2/Bottom Ash Pond 3/Ash Landfill multi-unit. **Table 2** also identifies applicable Appendix IV GWPSs, whether each Appendix IV constituent concentration measured in the downgradient wells exceeds a GWPS by direct comparison, and if the constituent concentrations are present at an SSL above the GWPS. Assessment monitoring of this multi-unit in 2024, found that concentrations of some Appendix IV constituents (arsenic, barium, chromium, cobalt, fluoride, lead, molybdenum, radium 226/228, and selenium) exhibited SSIs relative to background values at select monitoring wells, but each SSI concentration was below its respective GWPS. Assessment monitoring of this multi-unit will continue on a semi-annual basis per the requirements of 40 CFR § 257.95.

3.5 Emergency Holding Ponds

Statistical analyses of Appendix III and Appendix IV groundwater quality data for the Emergency Holding Ponds multi-unit were also performed consistent with the methodology described above for Bottom Ash Pond 1. **Table 3** summarizes the statistically determined background UPLs of each Appendix III and IV constituent for the Emergency Holding Ponds multi-unit. **Table 3** also identifies applicable Appendix IV GWPSs, whether each Appendix IV constituent concentration measured in the downgradient wells exceeds a GWPS by direct comparison, and if the constituent concentrations are present at an SSL above the GWPS. Assessment monitoring of the Emergency Holding Ponds multi-unit in 2024 found that concentrations of three Appendix IV constituents (barium, chromium, and fluoride) exhibited one or more SSIs above the background value at select monitoring wells. No Appendix IV constituent concentrations exceeded the respective GWPSs. Assessment monitoring of this multi-unit will continue on a semi-annual basis per the requirements of 40 CFR § 257.95.

3.6 Corrective Action Activities

3.6.1 Selection of Remedy for Bottom Ash Pond 1

After completion of the Bottom Ash Pond 1 excavation and retrofit, and the installation of the groundwater interceptor system extraction wells in 2021, the design of the groundwater recovery pumping system was conducted. The design

included elements of pumping, piping, electrical service, and process controls. The design was completed in 2022 and the contracting for installation of these elements was initiated in 2022. The system was partially installed in 2023 and completed in 2024, with system startup of both recovery wells in July 2024 for continual groundwater extraction.

4 General Information

The following subsections summarize any problems encountered in the LRS CCR program in 2024, resolutions to those problems (if needed), and upcoming actions planned for 2025.

4.1 Problems Encountered and Corrective Actions

Recovery well system startup was initially planned for March 2024, but was delayed when the system had to be shut down after initial testing of pumps and controls. The control panel ventilation and heating design was insufficient and required off-site modification to satisfy American National Standards Institute certification requirements. A faulty flow meter was also discovered during system testing that needed to be replaced for one of the recovery wells. Once these issues were resolved, the system was put into full-time operation in July 2024. RW-1 was set to a flow rate of seven gallons per minute and RW-2 was set to four gallons per minute. After a short time of operation, the RW-1 flow rate was set to four gallons per minute to allow for efficient system operation. Well pumping continued throughout the end of 2024.

Monitoring well MW-53B was replaced in April 2024 with monitoring well MW-53BR. The original MW-53B well was found to have a compromised screen that had allowed it to be filled with silt. In April 2024, the well was decommissioned by filling with bentonite grout and removal of the surface completion. The replacement well, MW-53BR, was drilled approximately 10-15 ft away from the original well. MW-53BR was drilled to a depth of 120 ft bgs and completed to match the original specifications of MW-53B. All work was performed by a licensed well driller. Data will be evaluated in 2025 comparing sampling results from MW-53BR to the original MW-53B from 2024, and earlier to determine if data similarity demonstrates a viable well replacement.

Monitoring wells MW-50B, MW-51B, and MW-52B adjacent to Ash Pond 3 also underwent upgrades in April 2024 by removing the original flush-mount surface completion, raising the well riser height to match the surrounding road grade, and installing new flush-mount surface completion. This work was done as the road grade surrounding Ash Pond 3 was raised during retrofit activities and the monitoring wells needed to be brought up to match the new grade. There are no issues with these wells that would impact their operation or sample recovery.

No other problems were encountered in 2024.

4.2 Actions Planned for 2025

Basin plans to continue the Assessment monitoring program for the three CCR unit/multi-unit monitoring systems at LRS in 2025. The Assessment monitoring program will include semi-annual groundwater sampling events and the required statistical evaluations. Performance monitoring samples are planned to be collected from RW-1 and RW-2 to help evaluate the performance and operation of the system.

In addition, Basin intends to install new dedicated submersible sampling pumps in MW-52B and MW-53BR. The original sampling pumps for these two wells have been removed due to poor performance (but were still operational).

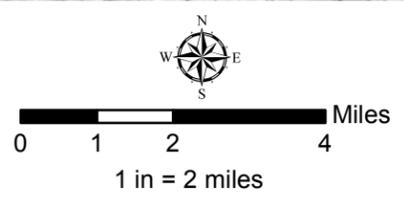

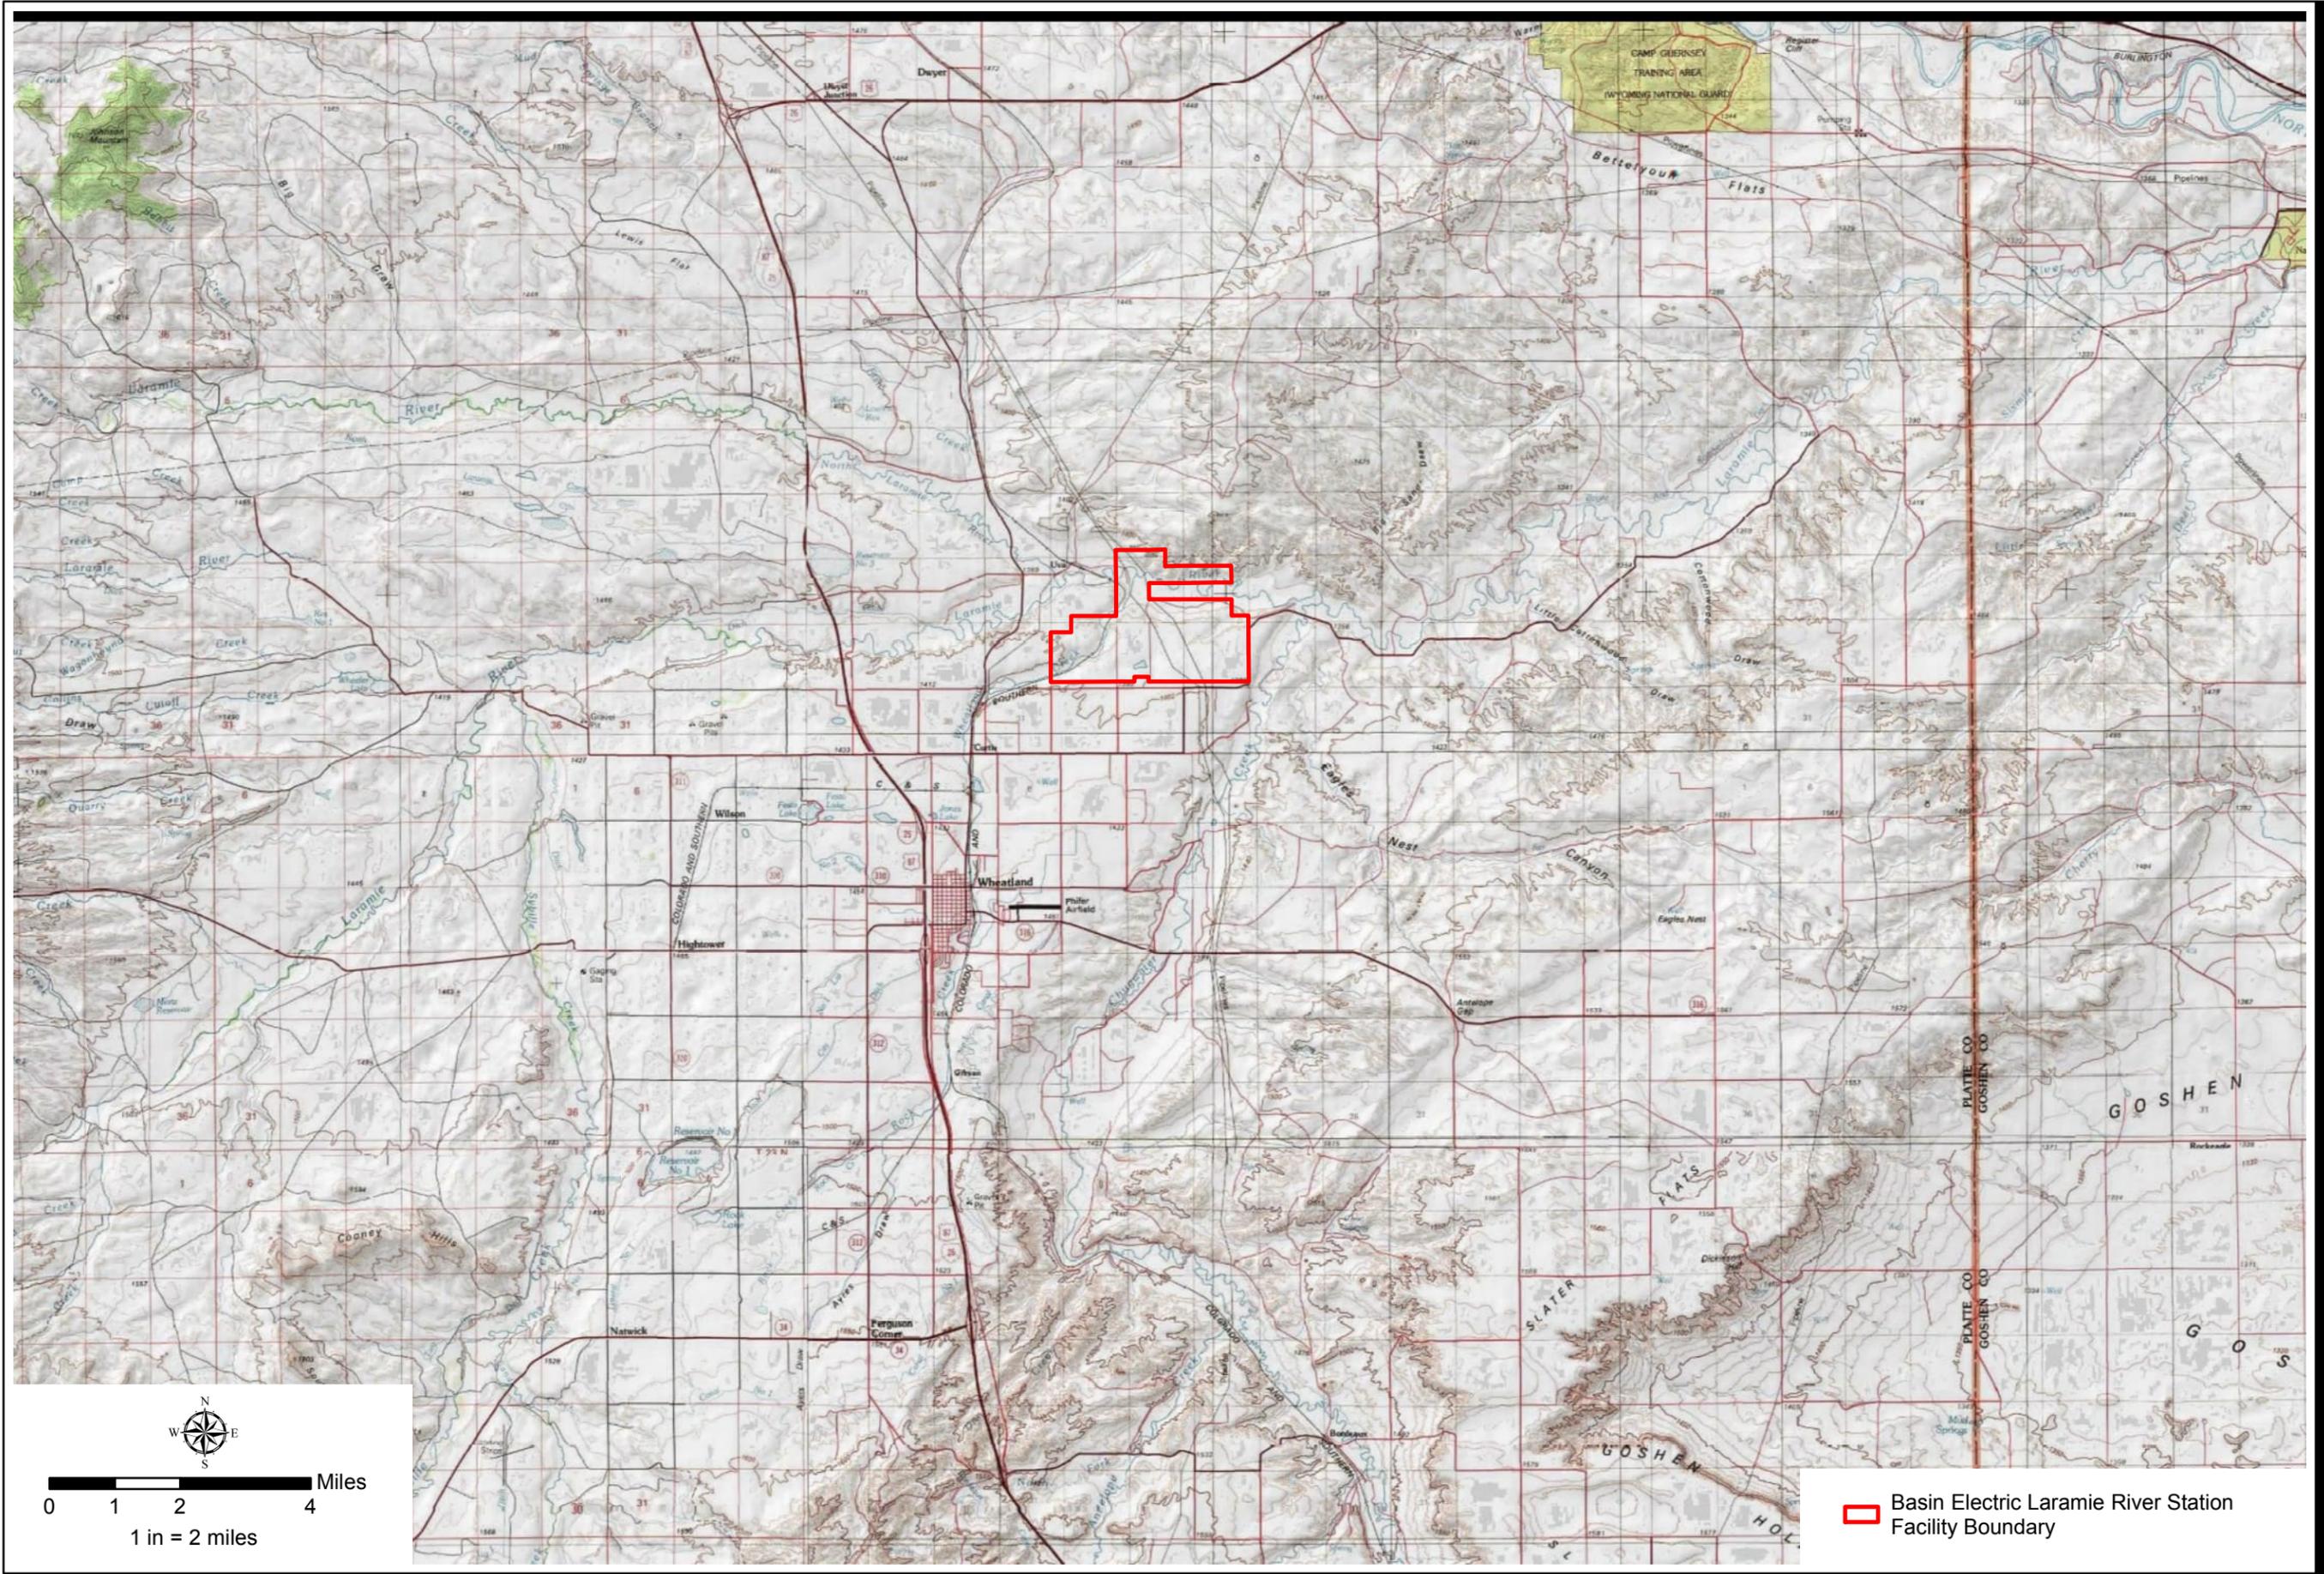

5 Summary and Conclusions

Two rounds of groundwater Assessment monitoring were performed at LRS in 2024. Statistical analysis of the results identified an SSI for at least one Appendix III constituent for each LRS CCR unit/multi-units. Therefore, Assessment monitoring will be performed on a semi-annual basis in 2025 for all LRS CCR unit/multi-units. Basin will monitor the selected remedy implemented in 2024 to address Appendix IV SSLs for lithium and molybdenum associated with Bottom Ash Pond 1 and continue to comply with CCR rule notification, reporting, and certification requirements.

1. Introduction

On behalf of Basin Electric Power Cooperative (Basin), AECOM Technical Services, Inc. (AECOM) prepared this Coal Combustion Residuals (CCR) Groundwater Sampling and Analysis Report for the Basin Laramie River Station (LRS).

This Sampling and Analysis Report was prepared to present the results of sampling and analysis of groundwater conducted per the monitoring requirements of the United States Environmental Protection Agency (USEPA) CCR rule (Chapter 40 of the Code of Federal Regulations [CFR], §§ 257.90 to 257.98).

The following three CCR unit/multi-units are present at LRS:

- Bottom Ash Pond 1;
- Bottom Ash Pond 2, Bottom Ash Pond 3, Ash Landfill (multi-unit); and
- Emergency Holding Ponds (multi-unit).

Semi-annual groundwater Assessment monitoring was performed at LRS in June and September 2024 for the three CCR unit/multi-units. Assessment monitoring involves groundwater level measurements, collection of groundwater samples from CCR monitoring wells, and analysis for Part 257 Appendix III and selected Appendix IV parameters.

2. Groundwater Flow

As required by 40 CFR § 257.93(c), groundwater elevations were measured in each well prior to purging each time groundwater was sampled. The groundwater measurements for the 2024 Assessment monitoring events, presented in **Table 1**, were used to create potentiometric surface maps for the uppermost aquifer for each monitoring event. The resulting potentiometric surface maps (contained in the operating record) were used to evaluate the direction of groundwater flow and hydraulic gradient for each subject CCR unit/multi-unit. **Figure 1** and **Figure 2** represent a potentiometric surface map, including inferred groundwater flow direction for each CCR unit/multiunit, constructed using measurements taken on June 4-5, 2024 and September 26-27, 2024, respectively. The potentiometric surface and inferred groundwater flow direction for the events completed in 2024 were generally consistent with previous events that have been conducted at LRS since monitoring began in 2016.

Groundwater flow velocities were calculated for each unit/multi-unit using measurements from the semi-annual assessment monitoring events in June and September 2024, as presented in **Appendix I** and summarized below:

CCR Unit/multi-unit	Calculated Seepage Velocities (feet/day)		
	Minimum	Maximum	Average
Bottom Ash Pond 1	0.027	0.45	0.11
Bottom Ash Pond 2, Bottom Ash Pond 3, Ash Landfill	0.013	2.7	0.19
Emergency Holding Ponds	0.04	2.9	0.33

Based on the groundwater flow conditions documented in this section, the relative function of the monitoring wells employed in the LRS CCR groundwater monitoring system is as follows:

CCR Unit/multi-unit	Background Wells	Downgradient Wells
Bottom Ash Pond 1	MW-52B, MW-53BR	MW-49B, MW-21B, MW-38B, MW-38C*
Bottom Ash Pond 2, Bottom Ash Pond 3, Ash Landfill	MW-39B, MW-32B	MW-36B, MW-37B, MW-20B, MW-14BR, MW-40B, MW-52B, MW-53BR
Emergency Holding Ponds	MW-41B, MW-42B, MW-43B	MW-44B, MW-45B, MW-46B, MW-47B

* MW-38C was added to the Bottom Ash Pond 1 monitoring program following its installation during groundwater characterization activities in the spring of 2019.

The following monitoring wells are also included in the LRS CCR monitoring system for the purpose of measuring groundwater elevations and evaluating groundwater flow direction and velocity in the vicinity of the bottom ash ponds and landfill: MW-33B, MW-34B, MW-35B, MW-48B, MW-50B, MW-51B, MW-54B, MW-55B, and MW-56B. These wells were added to the list following their installation during groundwater characterization activities conducted in the spring of 2019. Well MW-53B was replaced by MW-53BR in April 2024 prior to the sampling event in June 2024. MW-53B was determined to have a screen failure in September 2023. In addition to the well replacement, surface completions were upgraded in April 2024 for monitoring wells MW-50B, MW-51B, and MW-52B to raise them up to match the surrounding grade of the Pond 3 perimeter access road. Top-of-casing elevations were resurveyed by Basin Electric staff after the completion of well upgrade activities.

3. Groundwater Quality

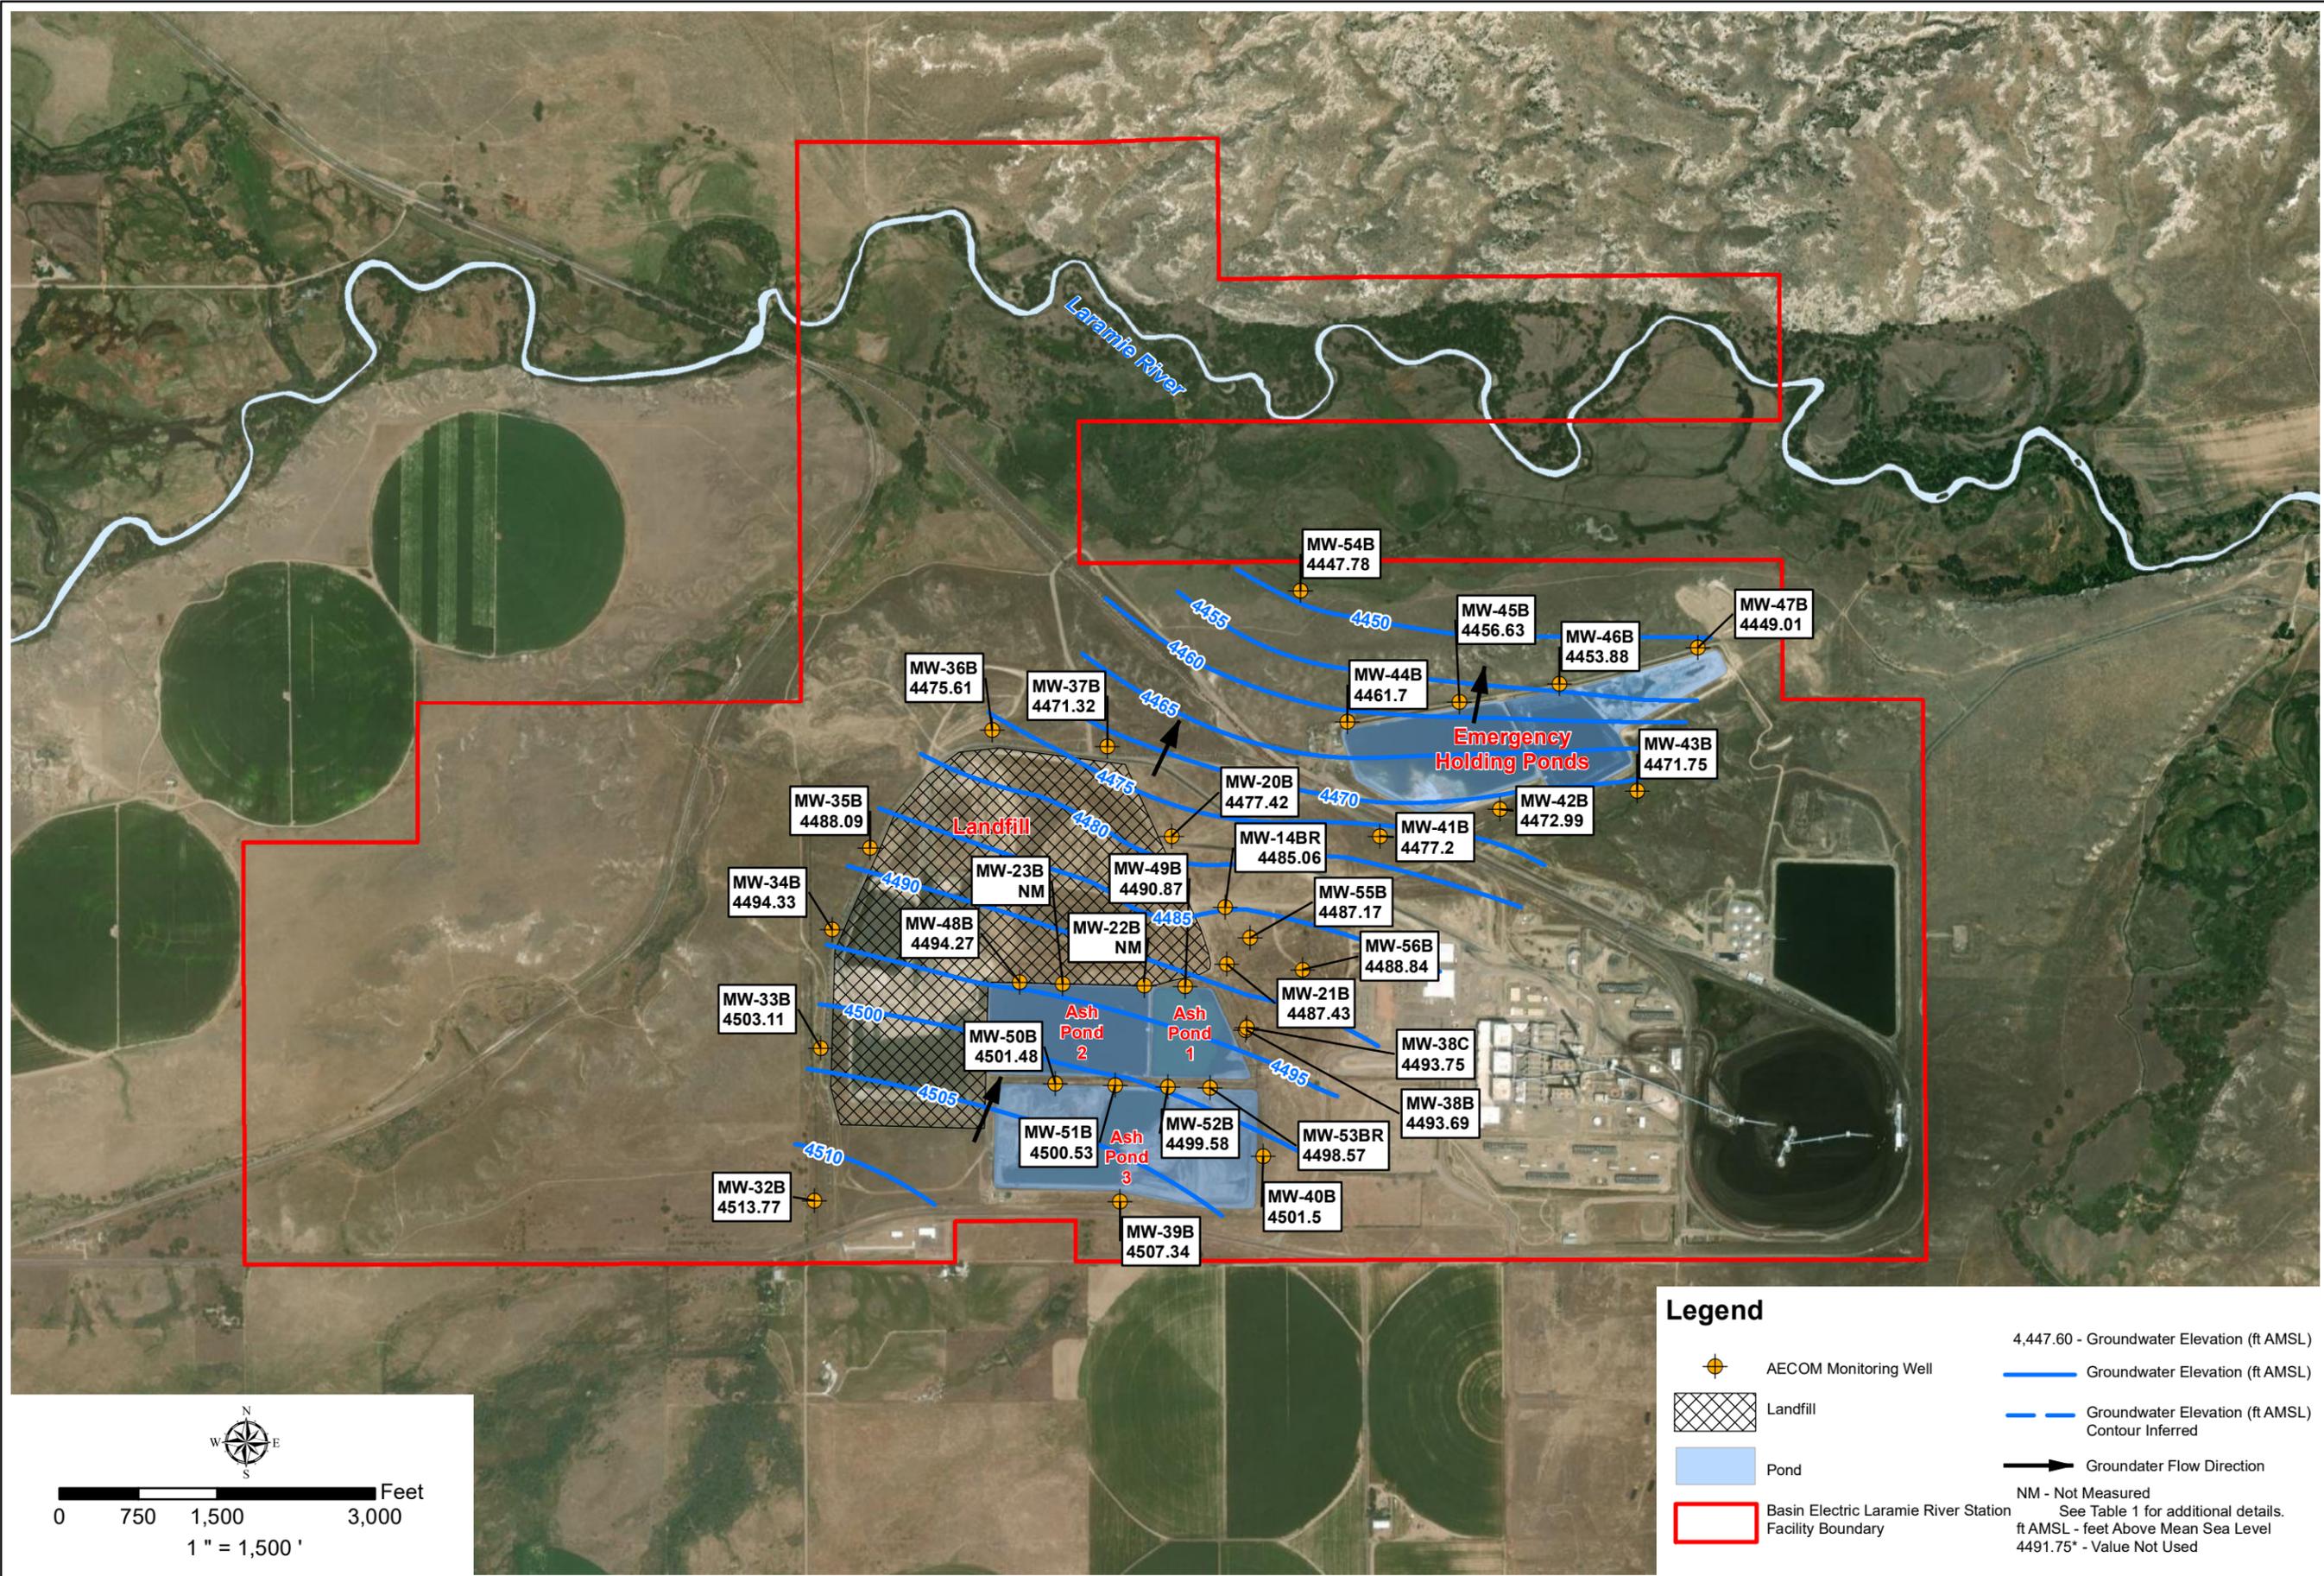

The semiannual Assessment monitoring events in June and September 2024 included samples from each well in the CCR unit/multiunit program.

The samples collected for each event were submitted under chain-of-custody to the Eurofins Denver Laboratory located in Arvada, Colorado for analysis of the analytes included CCR Rule Appendix III and Appendix IV. The laboratory reports issued by Eurofins for these events were reviewed against the chain-of-custody forms and for compliance with maximum holding times and conformance with project-required methods with copies included in the LRS operating record. The reported analytical results from Eurofins were reviewed and verified by an AECOM data validator/chemist using USEPA guidelines (USEPA 2020¹). Data validation concluded that field and laboratory precision, field and laboratory accuracy, method compliance, and data set completeness were acceptable based on the data reported. Data validation reports were prepared for each monitoring event and are included in the operating record. The validated results for the June and September 2024 sampling events were compiled into summary form as presented in **Tables 2, 3, and 4** with the results of quality assurance/quality control field blank samples presented in **Table 5**. Copies of the Eurofins analytical laboratory and data validation reports for the June and September 2024 events are included as **Appendix II**.

Appendix I

Groundwater Flow Calculations

Project: Laramie River Station
Calculations by: Justin Henry
Date: 1/12/2025

CCR Unit: Bottom Ash Pond 1
Checked by: Jeremy Hurshman
Date: 1/23/2025

Background Wells: MW-52B, MW-53B
Downgradient Wells: MW-49B, MW-21B, MW-38B

Hydraulic Gradient (i, ft/ft)

$$i = -dh/dl$$

where, i= hydraulic gradient
dh= change in hydraulic head between upgradient and downgradient locations
dl= horizontal distance between upgradient and downgradient locations, parallel to flow (perpendicular to potentiometric contours)

Date	Upgradient WL elevation (ft MSL)	Downgradient WL Elevation (ft MSL)	dh (ft)	dl (ft)	i (ft/ft)
June 5, 2024 (49B)	4500	4490.87	9.13	1050	0.00870
June 5, 2024 (52B)	4499.58	4490	9.58	1095	0.00875
September 26-27, 2024 (49B)	4500	4490.37	9.63	1200	0.00803
September 26-27, 2024 (52B)	4498.9	4490	8.90	1140	0.00781
Minimum					0.00781
Maximum					0.00875
Average					0.00832

Hydraulic Conductivity (K, ft/d)

K, from slug and pumping tests		
Minimum	1.04	ft/day
Maximum	1.04	ft/day
Average (geomean)	1.04	ft/day

Specific Yield, Effective Porosity

Specific Yield, Effective Porosity	
Minimum	0.02
Maximum	0.3
Average	0.15

Note: Effective porosity/specific yield is based on literature values from Arikaree Formation literature and textbook values for sandstone

Seepage Velocity

$$v_s = -K * i / n_e$$

where, v_s= seepage velocity, feet per day (ft/d)
K= hydraulic conductivity, feet per day (ft/d)
i= hydraulic gradient, feet per foot (ft/ft)
n_e= effective porosity/specific yield, unitless

Calculated Seepage Velocities (ft/day)				
	K (ft/day)	i (ft/ft)	n _e	v _s (ft/day)
Minimum	1.04	0.0078	0.30	0.027
Maximum	1.04	0.0087	0.02	0.45
Geometric Mean				0.11

JOB DESCRIPTION

Basin 2024 Support

JOB NUMBER

280-192407-1

Eurofins Denver

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins TestAmerica Project Manager.

Qualifiers

Metals

Qualifier	Qualifier Description
^+	Continuing Calibration Verification (CCV) is outside acceptance limits, high biased.
B	Compound was found in the blank and sample.
F1	MS and/or MSD recovery exceeds control limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 280-192407-1

Eurofins Denver

Job Narrative 280-192407-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

- Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt

The samples were received on 6/6/2024 12:10 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 5 coolers at receipt time were 2.4°C, 3.6°C, 4.5°C, 4.6°C and 4.6°C.

Note: All samples which require thermal preservation are considered acceptable if the arrival temperature is within 2C of the required temperature or method specified range. For samples with a specified temperature of 4C, samples with a temperature ranging from just above freezing temperature of water to 6C shall be acceptable. Samples that are hand delivered immediately following collection may not meet these criteria, however they will be deemed acceptable according to NELAC standards, if there is evidence that the chilling process has begun, such as arrival on ice, etc.

Receipt Exceptions

Radium 226 and Radium 228 results are reported in SDG 280-192407-2. All other requested analyses are reported in SDG 280-192407-1, 280-192407-1, 280-192407-2, 280-192407-3, 280-192407-4, 280-192407-5, 280-192407-6, 280-192407-7, 280-192407-8, 280-192407-9, 280-192407-10, 280-192407-11, 280-192407-11[MS], 280-192407-11[MSD], 280-192407-12, 280-192407-13, 280-192407-14, 280-192407-15, 280-192407-16, 280-192407-17, 280-192407-18, 280-192407-19, 280-192407-20, 280-192407-21 and 280-192407-22

Method 6010D - Metals (ICP)

Samples MW-47B (280-192407-1), MW-45B (280-192407-2), MW-44B (280-192407-3), MW-43B (280-192407-4), MW-42B (280-192407-5), MW-41B (280-192407-6), MW-37B (280-192407-7), MW-39B (280-192407-8), MW-32B (280-192407-9), MW-14B (280-192407-10), MW-20B (280-192407-11), MW-20B (280-192407-11MS), MW-20B (280-192407-11MSD), MW-36B (280-192407-12), MW-40B (280-192407-13), MW-53B2 (280-192407-14), MW-52B (280-192407-15), MW-49B (280-192407-16), MW-38B (280-192407-17), MW-21B (280-192407-18), Dup-01 (280-192407-19), MW-38C (280-192407-20), Field Blank (280-192407-21) and MW-46B (280-192407-22) were analyzed for Metals (ICP). The samples were prepared on 6/6/2024, 6/7/2024 and 6/18/2024 and analyzed on 6/7/2024, 6/8/2024, 6/10/2024, 6/13/2024 and 6/19/2024.

Method 6020B - Metals (ICP/MS)

Samples MW-47B (280-192407-1), MW-45B (280-192407-2), MW-44B (280-192407-3), MW-43B (280-192407-4), MW-42B (280-192407-5), MW-41B (280-192407-6), MW-37B (280-192407-7), MW-39B (280-192407-8), MW-32B (280-192407-9), MW-14B (280-192407-10), MW-20B (280-192407-11), MW-20B (280-192407-11MS), MW-20B (280-192407-11MSD), MW-36B (280-192407-12), MW-40B (280-192407-13), MW-53B2 (280-192407-14), MW-52B (280-192407-15), MW-49B (280-192407-16), MW-38B (280-192407-17), MW-21B (280-192407-18), Dup-01 (280-192407-19), MW-38C (280-192407-20), Field Blank (280-192407-21) and MW-46B (280-192407-22) were analyzed for Metals (ICP/MS). The samples were prepared on 6/6/2024, 6/7/2024 and 6/18/2024 and analyzed on 6/10/2024, 6/12/2024, 6/13/2024, 6/14/2024 and 6/19/2024.

The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 280-656144 and analytical batch 280-656703 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits. 280-192407-11[MSD]

The continuing calibration verification (CCV) associated with batch 280-656703 recovered above the upper control limit for Be. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated samples are impacted: 280-192407-16, 280-192407-17, 280-192407-18, 280-192407-19, 280-192407-20 and CCV 280-656703/53.

Method 7470A - Mercury (CVAA)

Samples MW-47B (280-192407-1), MW-45B (280-192407-2), MW-44B (280-192407-3), MW-43B (280-192407-4), MW-42B (280-192407-5), MW-41B (280-192407-6), MW-37B (280-192407-7), MW-39B (280-192407-8), MW-32B (280-192407-9), MW-14B (280-192407-10), MW-20B (280-192407-11), MW-20B (280-192407-11MS), MW-20B (280-192407-11MSD), MW-36B (280-192407-12), MW-40B (280-192407-13), MW-53B2 (280-192407-14), MW-52B (280-192407-15), MW-49B (280-192407-16), MW-38B (280-192407-17), MW-21B (280-192407-18), Dup-01 (280-192407-19), MW-38C (280-192407-20), Field Blank (280-192407-21) and MW-46B (280-192407-22) were analyzed for Mercury (CVAA). The samples were prepared on 6/13/2024 and analyzed on 6/14/2024.

Method SM 2540C - Solids, Total Dissolved (TDS)

Samples MW-47B (280-192407-1), MW-45B (280-192407-2), MW-44B (280-192407-3), MW-43B (280-192407-4), MW-42B (280-192407-5), MW-41B (280-192407-6), MW-37B (280-192407-7), MW-39B (280-192407-8), MW-32B (280-192407-9), MW-14B (280-192407-10), MW-20B (280-192407-11), MW-36B (280-192407-12), MW-40B (280-192407-13), MW-53B2 (280-192407-14), MW-52B (280-192407-15), MW-49B (280-192407-16), MW-38B (280-192407-17), MW-21B (280-192407-18), Dup-01 (280-192407-19), MW-38C (280-192407-20), Field Blank (280-192407-21) and MW-46B (280-192407-22) were analyzed for Solids, Total Dissolved (TDS). The samples were analyzed on 6/7/2024 and 6/10/2024.

Method 9056A - Anions, Ion Chromatography

Samples MW-47B (280-192407-1), MW-45B (280-192407-2), MW-44B (280-192407-3), MW-43B (280-192407-4), MW-42B (280-192407-5), MW-41B (280-192407-6), MW-37B (280-192407-7), MW-39B (280-192407-8), MW-32B (280-192407-9), MW-14B (280-192407-10), MW-20B (280-192407-11), MW-20B (280-192407-11MS), MW-20B (280-192407-11MSD), MW-36B (280-192407-12), MW-40B (280-192407-13), MW-53B2 (280-192407-14), MW-52B (280-192407-15), MW-49B (280-192407-16), MW-38B (280-192407-17), MW-21B (280-192407-18), Dup-01 (280-192407-19), MW-38C (280-192407-20), Field Blank (280-192407-21) and MW-46B (280-192407-22) were analyzed for Anions, Ion Chromatography. The samples were analyzed on 6/7/2024, 6/8/2024, 6/13/2024 and 6/14/2024.

Samples MW-47B (280-192407-1)[5x], MW-45B (280-192407-2)[5x], MW-44B (280-192407-3)[5x], MW-43B (280-192407-4)[10x], MW-42B (280-192407-5)[20x], MW-41B (280-192407-6)[10x], MW-37B (280-192407-7)[10x], MW-39B (280-192407-8)[5x], MW-32B (280-192407-9)[20x], MW-14B (280-192407-10)[5x], MW-20B (280-192407-11)[5x], MW-20B (280-192407-11MS)[5x], MW-20B (280-192407-11MSD)[5x], MW-36B (280-192407-12)[5x], MW-40B (280-192407-13)[5x], MW-52B (280-192407-15)[5x], MW-49B (280-192407-16)[5x], MW-38B (280-192407-17)[20x], MW-38B (280-192407-17)[50x], MW-21B (280-192407-18)[20x], Dup-01 (280-192407-19)[20x], Dup-01 (280-192407-19)[50x], MW-38C (280-192407-20)[10x] and MW-46B (280-192407-22)[5x] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins TestAmerica Project Manager.

Qualifiers

Rad

Qualifier	Qualifier Description
U	Result is less than the sample detection limit.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 280-192407-2

Eurofins Denver

Job Narrative 280-192407-2

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition, all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method.

Eurofins Environment Testing attests to the validity of the laboratory data generated by Eurofins facilities reported herein. All analyses performed by Eurofins Environment Testing facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. Eurofins Environment Testing's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report.

Calculations are performed before rounding to avoid round-off errors in calculated results.

Proper preservation was noted for the methods performed on these samples, unless otherwise detailed below.

All soil/sediment sample results for radiochemistry analyses are based upon sample as dried and disaggregated with the exception of tritium, carbon-14, and iodine-129 by gamma spectroscopy or unless requested as wet weight by the client.

Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative.

Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.

The matrix for the Method Blank and LCS/LCSD is as close to the samples as can be reasonably achieved. Detailed information can be found in the most current revision of the associated SOP.

The method blank (MB) z-score is within limits, unless stated otherwise below, and is stored in the level IV raw data.

This laboratory report is confidential and is intended for the sole use of Eurofins Environment Testing and its client.

Receipt

The samples were received on 6/6/2024 12:10 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 5 coolers at receipt time were 2.4°C, 3.6°C, 4.5°C, 4.6°C and 4.6°C.

Note: All samples which require thermal preservation are considered acceptable if the arrival temperature is within 2C of the required temperature or method specified range. For samples with a specified temperature of 4C, samples with a temperature ranging from just above freezing temperature of water to 6C shall be acceptable. Samples that are hand delivered immediately following collection may not meet these criteria, however they will be deemed acceptable according to NELAC standards, if there is evidence that the chilling process has begun, such as arrival on ice, etc.

Receipt Exceptions

Radium 226 and Radium 228 results are reported in SDG 280-192407-2. All other requested analyses are reported in SDG 280-192407-1, 280-192407-1, 280-192407-2, 280-192407-3, 280-192407-4, 280-192407-5, 280-192407-6, 280-192407-7, 280-192407-8, 280-192407-9, 280-192407-10, 280-192407-11, 280-192407-11[MS], 280-192407-11[MSD], 280-192407-12, 280-192407-13, 280-192407-14, 280-192407-15, 280-192407-16, 280-192407-17, 280-192407-18, 280-192407-19, 280-192407-20, 280-192407-21 and 280-192407-22

Eurofins Denver

6/13/2024 and analyzed on 7/8/2024 and 7/9/2024.

Radium-226 prep batch 160-666170. The following sample(s) were prepared at a reduced aliquot due to matrix. MW-53B2 (280-192407-14), MW-52B (280-192407-15). The sample(s): were cloudy

Method 9320 - Radium-228 (GFPC)

Samples MW-47B (280-192407-1), MW-45B (280-192407-2), MW-44B (280-192407-3), MW-43B (280-192407-4), MW-42B (280-192407-5), MW-41B (280-192407-6), MW-37B (280-192407-7), MW-39B (280-192407-8), MW-32B (280-192407-9), MW-14B (280-192407-10), MW-20B (280-192407-11), MW-20B (280-192407-11MS), MW-20B (280-192407-11MSD), MW-36B (280-192407-12), MW-40B (280-192407-13), MW-53B2 (280-192407-14), MW-52B (280-192407-15), MW-49B (280-192407-16), MW-38B (280-192407-17), MW-21B (280-192407-18), Dup-01 (280-192407-19), MW-38C (280-192407-20), Field Blank (280-192407-21) and MW-46B (280-192407-22) were analyzed for Radium-228 (GFPC). The samples were prepared on 6/13/2024 and analyzed on 7/3/2024.

Radium-228 prep batch 160-666171. The following sample(s) were prepared at a reduced aliquot due to matrix. MW-53B2 (280-192407-14), MW-52B (280-192407-15). The sample(s): were cloudy

Method Ra226_Ra228 - Combined Radium-226 and Radium-228

Samples MW-47B (280-192407-1), MW-45B (280-192407-2), MW-44B (280-192407-3), MW-43B (280-192407-4), MW-42B (280-192407-5), MW-41B (280-192407-6), MW-37B (280-192407-7), MW-39B (280-192407-8), MW-32B (280-192407-9), MW-14B (280-192407-10), MW-20B (280-192407-11), MW-36B (280-192407-12), MW-40B (280-192407-13), MW-53B2 (280-192407-14), MW-52B (280-192407-15), MW-49B (280-192407-16), MW-38B (280-192407-17), MW-21B (280-192407-18), Dup-01 (280-192407-19), MW-38C (280-192407-20), Field Blank (280-192407-21) and MW-46B (280-192407-22) were analyzed for Combined Radium-226 and Radium-228. The samples were analyzed on 7/9/2024 and 7/10/2024.

Note: Since laboratory accreditations are subject to change, Eurofins TestAmerica places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/test/matrix being analyzed, the samples must be shipped back to the Eurofins TestAmerica laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins TestAmerica attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins TestAmerica.

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

ANALYTICAL REPORT

PREPARED FOR

Attn: Ms. Katie Abbott
AECOM Technical Services Inc
6200 S. Quebec Street
Greenwood Village, Colorado 80111

Generated 10/10/2024 3:10:52 PM

JOB DESCRIPTION

Basin 2024 Support

JOB NUMBER

280-197290-2

Eurofins Denver

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins TestAmerica Project Manager.

Job ID: 280-197290-2

Qualifiers

Metals

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
B	Compound was found in the blank and sample.
F1	MS and/or MSD recovery exceeds control limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
F1	MS and/or MSD recovery exceeds control limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 280-197290-2

Eurofins Denver

Job Narrative 280-197290-2

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt

The samples were received on 9/27/2024 4:30 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 6 coolers at receipt time were 1.4°C, 1.9°C, 2.7°C, 3.4°C, 3.9°C and 4.3°C.

Receipt Exceptions

Client canceled the request for pH analysis indicating that this is a field method and should not have been included on the COC. 280-197290-1, 280-197290-2, 280-197290-3, 280-197290-4, 280-197290-5, 280-197290-6, 280-197290-7, 280-197290-8, 280-197290-9, 280-197290-10, 280-197290-11, 280-197290-12, 280-197290-13, 280-197290-14, 280-197290-15, 280-197290-16, 280-197290-17, 280-197290-18, 280-197290-18[MS], 280-197290-18[MSD], 280-197290-19, 280-197290-20, 280-197290-21 and 280-197290-22

Method 6010D - Metals (ICP)

Samples MW-14B-09252024 (280-197290-1), MW-20B-09252024 (280-197290-2), MW-37B-09252024 (280-197290-3), MW-49B-09252024 (280-197290-4), MW-53BR-09262024 (280-197290-5), MW-52B-09262024 (280-197290-6), MW-32B-09262024 (280-197290-7), MW-39B-09262024 (280-197290-8), MW-40B-09262024 (280-197290-9), MW-41B-09262024 (280-197290-10), MW-47B-09262024 (280-197290-11), MW-45B-09262024 (280-197290-12), MW-44B-09262024 (280-197290-13), MW-42B-09262024 (280-197290-14), MW-43B-09262024 (280-197290-15), MW-46B-09272024 (280-197290-16), MW-36B-09272024 (280-197290-17), MW-21B-09272024 (280-197290-18), MW-21B-09272024 (280-197290-18MS), MW-21B-09272024 (280-197290-18MSD), MW-38B-09272024 (280-197290-19), DUP-01-09272024 (280-197290-20), MW-38C-09272024 (280-197290-21) and EB-09272024 (280-197290-22) were analyzed for Metals (ICP). The samples were prepared on 10/1/2024 and 10/2/2024 and analyzed on 10/1/2024 and 10/3/2024.

Due to the high concentration of Ca, the matrix spike / matrix spike duplicate (MS/MSD) for preparation batch 280-669233 and analytical batch 280-669422 could not be evaluated for accuracy and precision. The associated laboratory control sample (LCS) met acceptance criteria. 280-197290-18[MSD]

Method 6020B - Metals (ICP/MS)

Samples MW-14B-09252024 (280-197290-1), MW-20B-09252024 (280-197290-2), MW-37B-09252024 (280-197290-3), MW-49B-09252024 (280-197290-4), MW-53BR-09262024 (280-197290-5), MW-52B-09262024 (280-197290-6), MW-32B-09262024 (280-197290-7), MW-39B-09262024 (280-197290-8), MW-40B-09262024 (280-197290-9), MW-41B-09262024 (280-197290-10), MW-47B-09262024 (280-197290-11), MW-45B-09262024 (280-197290-12), MW-44B-09262024 (280-197290-13), MW-42B-09262024 (280-197290-14), MW-43B-09262024 (280-197290-15), MW-46B-09272024 (280-197290-16), MW-36B-09272024 (280-197290-17), MW-21B-09272024 (280-197290-18), MW-21B-09272024 (280-197290-18MS), MW-21B-09272024 (280-197290-18MSD), MW-38B-09272024 (280-197290-19), DUP-01-09272024 (280-197290-20), MW-38C-09272024 (280-197290-21) and EB-09272024 (280-197290-22) were analyzed for Metals (ICP/MS). The samples were prepared on 10/1/2024 and 10/2/2024 and analyzed on 10/1/2024, 10/2/2024 and 10/3/2024.

The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 280-669233 and analytical batch 280-669419 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits. 280-197290-18[MS]

Method 7470A - Mercury (CVAA)

Eurofins Denver

The samples were prepared on 10/2/2024 and analyzed on 10/2/2024 and 10/3/2024.

Method SM 2540C - Solids, Total Dissolved (TDS)

Samples MW-14B-09252024 (280-197290-1), MW-20B-09252024 (280-197290-2), MW-37B-09252024 (280-197290-3), MW-49B-09252024 (280-197290-4), MW-53BR-09262024 (280-197290-5), MW-52B-09262024 (280-197290-6), MW-32B-09262024 (280-197290-7), MW-39B-09262024 (280-197290-8), MW-40B-09262024 (280-197290-9), MW-41B-09262024 (280-197290-10), MW-47B-09262024 (280-197290-11), MW-45B-09262024 (280-197290-12), MW-44B-09262024 (280-197290-13), MW-42B-09262024 (280-197290-14), MW-43B-09262024 (280-197290-15), MW-46B-09272024 (280-197290-16), MW-36B-09272024 (280-197290-17), MW-21B-09272024 (280-197290-18), MW-38B-09272024 (280-197290-19), DUP-01-09272024 (280-197290-20), MW-38C-09272024 (280-197290-21) and EB-09272024 (280-197290-22) were analyzed for Solids, Total Dissolved (TDS). The samples were analyzed on 9/30/2024, 10/1/2024 and 10/4/2024.

The method blank for 669287 contained Total Dissolved Solids (TDS) above the method detection limit (MDL). Associated samples were not re-analyzed because results were greater than 10X the value found in the method blank.

Method 9056A - Anions, Ion Chromatography

Samples MW-14B-09252024 (280-197290-1), MW-20B-09252024 (280-197290-2), MW-37B-09252024 (280-197290-3), MW-49B-09252024 (280-197290-4), MW-53BR-09262024 (280-197290-5), MW-52B-09262024 (280-197290-6), MW-32B-09262024 (280-197290-7), MW-39B-09262024 (280-197290-8), MW-40B-09262024 (280-197290-9), MW-41B-09262024 (280-197290-10), MW-47B-09262024 (280-197290-11), MW-45B-09262024 (280-197290-12), MW-44B-09262024 (280-197290-13), MW-42B-09262024 (280-197290-14), MW-43B-09262024 (280-197290-15), MW-46B-09272024 (280-197290-16), MW-36B-09272024 (280-197290-17), MW-21B-09272024 (280-197290-18), MW-21B-09272024 (280-197290-18MS), MW-21B-09272024 (280-197290-18MSD), MW-38B-09272024 (280-197290-19), DUP-01-09272024 (280-197290-20), MW-38C-09272024 (280-197290-21) and EB-09272024 (280-197290-22) were analyzed for Anions, Ion Chromatography. The samples were analyzed on 10/2/2024, 10/3/2024 and 10/4/2024.

Samples MW-14B-09252024 (280-197290-1)[5x], MW-20B-09252024 (280-197290-2)[5x], MW-37B-09252024 (280-197290-3)[5x], MW-49B-09252024 (280-197290-4)[5x], MW-53BR-09262024 (280-197290-5)[5x], MW-52B-09262024 (280-197290-6)[5x], MW-32B-09262024 (280-197290-7)[10x], MW-39B-09262024 (280-197290-8)[5x], MW-40B-09262024 (280-197290-9)[5x], MW-41B-09262024 (280-197290-10)[5x], MW-47B-09262024 (280-197290-11)[5x], MW-45B-09262024 (280-197290-12)[5x], MW-44B-09262024 (280-197290-13)[5x], MW-42B-09262024 (280-197290-14)[10x], MW-43B-09262024 (280-197290-15)[5x], MW-46B-09272024 (280-197290-16)[5x], MW-36B-09272024 (280-197290-17)[5x], MW-21B-09272024 (280-197290-18)[20x], MW-21B-09272024 (280-197290-18MS)[20x], MW-21B-09272024 (280-197290-18MSD)[20x], MW-38B-09272024 (280-197290-19)[10x], MW-38B-09272024 (280-197290-19)[50x], DUP-01-09272024 (280-197290-20)[10x], DUP-01-09272024 (280-197290-20)[50x] and MW-38C-09272024 (280-197290-21)[5x] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 280-669489 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits. The associated samples are: 280-197290-18[MS] and 280-197290-18[MSD].

The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 280-669489 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits. The associated samples are: 280-197290-E-9 MS and 280-197290-E-9 MSD.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

JOB DESCRIPTION

Basin 2024 Support

JOB NUMBER

280-197290-1

Eurofins Denver

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins TestAmerica Project Manager.

Qualifiers

Rad

Qualifier	Qualifier Description
U	Result is less than the sample detection limit.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Eurofins Denver

Job Narrative 280-197290-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt

The samples were received on 9/27/2024 4:30 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 6 coolers at receipt time were 1.4°C, 1.9°C, 2.7°C, 3.4°C, 3.9°C and 4.3°C.

Receipt Exceptions

Client canceled the request for pH analysis indicating that this is a field method and should not have been included on the COC. 280-197290-1, 280-197290-2, 280-197290-3, 280-197290-4, 280-197290-5, 280-197290-6, 280-197290-7, 280-197290-8, 280-197290-9, 280-197290-10, 280-197290-11, 280-197290-12, 280-197290-13, 280-197290-14, 280-197290-15, 280-197290-16, 280-197290-17, 280-197290-18, 280-197290-18[MS], 280-197290-18[MSD], 280-197290-19, 280-197290-20, 280-197290-21 and 280-197290-22

The samples were prepared on 10/2/2024 and analyzed on 10/14/2024 and 10/21/2024.

Radium-228 batch 681953

The LCS recovered at (128%). The limits in our LIMS system at 75-125 reflect the requirements of a regulatory agency that represents a large amount of our work. However the samples associated with this LCS are not from this agency and are therefore held to our in-house statistical limits of (69-145) per method requirements. The LCS passes, no further action is required. LCS 160-681953/2-A

Method Ra226_Ra228 - Combined Radium-226 and Radium-228

Samples MW-14B-09252024 (280-197290-1), MW-20B-09252024 (280-197290-2), MW-37B-09252024 (280-197290-3), MW-49B-09252024 (280-197290-4), MW-53BR-09262024 (280-197290-5), MW-52B-09262024 (280-197290-6), MW-32B-09262024 (280-197290-7), MW-39B-09262024 (280-197290-8), MW-40B-09262024 (280-197290-9), MW-41B-09262024 (280-197290-10), MW-47B-09262024 (280-197290-11), MW-45B-09262024 (280-197290-12), MW-44B-09262024

Note: Since laboratory accreditations are subject to change, Eurofins TestAmerica places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/leastmatrix being analyzed, the samples must be shipped back to the Eurofins TestAmerica laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins TestAmerica attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins TestAmerica

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Inorganic and Radiochemistry
Limited Data Validation Report

Basin Electric Laramie, Wyoming
First Semi-Annual Groundwater Monitoring
2024
Analyzed by Eurofins Environment Testing

Prepared By Jamie Herman
Project Chemist

Overview

The samples collected, analyzed, and validated during the semi-annual groundwater monitoring event are listed in the Table of Samples Validated.

Samples were submitted to Eurofins Environment Testing in Denver, Colorado and Eurofins Environment Testing in Saint Louis, Missouri.

Data were evaluated using guidance set forth in the *National Functional Guidelines for Inorganic Superfund Methods Data Review*, (November 2020), method requirements, and laboratory criteria, as applicable.

The following data components were reviewed during the data validation procedure:

Submitted Deliverables
Case Narratives (including any assigned laboratory flags)
Chain-of-Custody form(s) and sample integrity
Sample results, reporting limits, dilution factors
Holding times
Method (preparation) blank results
Field blank results
Laboratory control sample (LCS), laboratory control sample duplicate (LCSD) results
Matrix spike (MS), matrix spike duplicate (MSD) results
Laboratory duplicate (or spiked duplicate) results
Field duplicate (FD) results (calculated Relative Percent Differences [RPD])
Electronic data deliverables (EDDs) – EQulS format

Overall Data Assessment

Field and laboratory precision, field and laboratory accuracy, method compliance, and data set completeness are determined to be acceptable based on the data reported. As no data were missing or qualified as unusable, the completeness of the data set was considered 100% and is acceptable. All other reported data are suitable for their intended use with the qualifications and clarifications noted.

Project Name: Basin Electric Laramie River Station, Wyoming		Laboratory: Eurofins Environment Testing in Denver, Colorado, and Eurofins Environment Testing in Saint Louis, Missouri				
Project Reference: Semi-Annual Groundwater Monitoring		Sample Matrix: Groundwater				
AECOM Project: 60732883.1.3		Sample Start Date: 6/4/2024				
Validator/Date Validated: Jamie Herman, 7/19/2024		Sample End Date: 6/5/2024				
Secondary Review by: Cheyana Cokley		Secondary Review Date: 7/23/2024				
Samples Validated: See Table of Samples Validated						
Parameters Validated: Total Metals by SW-846 Methods 6010C, 6020A, and 7470A, Anions (Chloride, Fluoride, and Sulfate) by SW-846 Method 9056A, TDS by SM2540C, Radium-226 by SW-846 Method 9315, Radium-228 by SW-846 Method 9320, and Combined Radium						
Sample Delivery Groups (SDGs): 280-192407-1, 280-192407-2						
PRECISION, ACCURACY, METHOD COMPLIANCE, AND COMPLETENESS ASSESSMENT						
Precision:		X	Acceptable		Unacceptable	JH Initials
<p>Comments: Precision is the measure of variability of individual sample measurements. Field precision was evaluated by reviewing the field duplicate results, and laboratory precision was evaluated by reviewing method duplicate sample results, laboratory control sample (LCS) to LCS duplicate (LCSD) results, and matrix spike (MS) to MS duplicate (MSD) results. Laboratory criteria was used to evaluate laboratory precision. Field and laboratory precision is acceptable as majority of the results are unqualified, and no data are missing or rejected. Precision measurements are reviewed in items 17 and 21.</p>						
Accuracy:		X	Acceptable		Unacceptable	JH Initials
<p>Comments: Field accuracy, a measure of the sampling bias, can be determined by reviewing field and equipment blank results for evidence of sample contamination stemming from sampling activities and/or field conditions. Laboratory accuracy is a measure of the system bias, and was measured by evaluating LCS/LCSD, MS/MSD, tracer (radiological) percent recoveries (%Rs). LCS/LCSD %Rs demonstrated the overall performance of the analysis. MS/MSD and tracer %Rs provided information on sample matrix interferences. Accuracy measurements were evaluated using laboratory control limits. Overall field and laboratory accuracy is acceptable because the majority of the results are unqualified, and no data are missing or rejected. Accuracy measurements are reviewed in items 12, 14, 15, 16, and 20.</p>						
Method Compliance:		X	Acceptable		Unacceptable	JH Initials
<p>Comments: Method compliance was determined by evaluating sample integrity, holding time, reporting limits, and laboratory blanks against method specified requirements. Overall method compliance is acceptable because the majority of the results were unqualified, and no data were missing or rejected. Method compliance measurements are also reviewed in items 4, 6, 8, 11, 13, 18, 19, 20, and 22.</p>						
Completeness:		X	Acceptable		Unacceptable	JH Initials
<p>Comments: Completeness is the overall ratio of the number of samples planned versus the number of samples with valid analyses. Determination of completeness included a review of chain of custody records, laboratory analytical methods and reporting limits, laboratory case narratives, and project requirements. Completeness also included review of the laboratory sample data results, QC summary reports, and electronic data deliverables (EDDs).</p> <p>The completeness of the data set was considered 100% and is acceptable. All other reported data are suitable for their intended use as reported with the clarifications and qualifications noted.</p>						

VALIDATION CRITERIA CHECK						
Data validation qualifiers potentially assigned during this review:						
J	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.					
J+	The result is an estimated quantity, but the result may be biased high.					
J-	The result is an estimated quantity, but the result may be biased low.					
R	The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.					
U	The analyte was analyzed for, but was not detected above the level of the adjusted detection limit or quantitation limit, as appropriate.					
UJ	The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.					
1. Did the laboratory identify any non-conformances related to the analytical results?		X	Yes		No	JH Initials
Comments: Data qualification, if any, related to the narrative comments and/or assigned laboratory flags contained in the analytical reports are discussed in the following sections.						
2. Were sample Chain-of-Custody (COC) forms complete?		X	Yes		No	JH Initials
Comments: No issues were observed, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt.						
3. Were all the analyses requested for the samples on the COCs completed by the laboratory?		X	Yes		No	JH Initials
Comments: All requested analyses were completed by the laboratory.						
4. Were samples received in good condition and at the appropriate temperature?		X	Yes		No	JH Initials
Comments: All samples were received intact and within the recommended <6°C temperature, as applicable to the Methods.						
5. Were the reported analytical methods in compliance with WP/QAPP, permit, or COC?		X	Yes		No	JH Initials
Comments: The reported target analytes and methods complied with parameters and methods listed on the COC.						
6. Were detection limits in accordance with WP/QAPP, permit, or method?			Yes	X	No	JH Initials
<p>Comments: No sample results were reported as non-detect at elevated reporting limits. Trace level detections, results reported between the method detection limit (MDL) and the reporting limit (RL) were qualified as estimated (J lq).</p> <p>For radiological parameters:</p> <ul style="list-style-type: none"> • If the associated uncertainty was less than the reported result, no qualification was necessary. • If the associated uncertainty was greater than the reported result, and the 2 sigma (σ) uncertainty multiplied by 1.65 was less than or equal to the specified detection limit, no qualification was necessary. • If the associated uncertainty was greater than the reported result, and the 2 σ uncertainty multiplied by 1.65 was greater than the specified detection limit, then the associated sample and qualifications are included in the table below. 						
Samples	Analyte	Result (pCi/L)	± 2 Sigma (σ) Uncertainty	MDC (pCi/L)	Qualification	
Data Package 280-192407-2						
Field Blank	Combined Radium 226/228	0.372	0.64185	0.629	As the 2 σ uncertainty multiplied by 1.65 was greater than the reported minimum detectable concentration (MDC), the

	Radium-228	0.325	0.5379	0.521	

σ – Sigma
 ± – Plus or Minus
 MDC – Minimum Detectable Concentration
 pCi/L – PicoCuries per Liter
 J – Estimated Concentration
 v – Compound Identification Issue

Refer to the Table of Qualified Analytical Results.

7. Do the laboratory reports include only those constituents requested to be reported for a specific analytical method?	X	Yes		No	JH	Initials
---	----------	-----	--	----	----	----------

Comments: Only the requested target analytes were reported.

8. Were sample holding times met?	X	Yes		No	JH	Initials
-----------------------------------	----------	-----	--	----	----	----------

Comments: The sample preparation and analytical holding times were within the Method requirements.

9. Were correct concentration units reported?	X	Yes		No	JH	Initials
---	----------	-----	--	----	----	----------

Comments: Yes, the correct concentration units were reported.

10. Were the reporting requirements for flagged data met?	X	Yes		No	JH	Initials
---	----------	-----	--	----	----	----------

Comments: Laboratory flags were reviewed and considered during the data validation procedure. Data validation qualifiers override assigned laboratory flags.

11. Were laboratory blank samples free of target analyte contamination?		Yes	X	No	JH	Initials
---	--	-----	----------	----	----	----------

Comments: With the following exceptions, the laboratory blanks were free of target analyte contamination, and radiological parameter results were less than the MDC.

Laboratory Blank/ Associated Samples	Analyte	Concentration	Qualification
Data Package 280-192407-1			
MB 280-656144/1-A MW-47B MW-45B MW-44B MW-43B MW-42B MW-41B MW-37B MW-39B MW-32B MW-14B MW-20B MW-36B MW-40B MW-53B2 MW-52B MW-49B MW-38B MW-21B Dup-01 MW-38C	Calcium	26.17 µg/L	As the associated sample results were reported at concentrations >10x the blank concentration, data qualification was not considered necessary.

VALIDATION CRITERIA CHECK						
MB 280-656150/1-A Field Blank MW-46B	Calcium	37.45 µg/L	The result for sample Field Blank was below the RL and was qualified as non-detected at the RL (U bl).			
MB 280-656150/1-A MW-46B	Chromium	1.180 µg/L	As the associated sample result was reported at concentrations >10x the blank concentration, data qualification was not considered necessary.			
<small>≥ – Greater Than or Equal To > - Greater Than µg/L – Micrograms per Liter</small>		<small>bl – Laboratory Blank Contamination MB – Method Blank U – Non-Detect</small>				
Refer to the Table of Qualified Analytical Results.						
12. Were trip blank, field blank, and/or equipment rinse blank samples free of target analyte contamination?		Yes	X	No	JH	Initials
Comments: A trip blank and equipment blank were not required for this sampling event. One field blank was collected, and with the exception noted below, the field blank was free of target analyte contamination, and radiological parameter results were less than the MDC.						
Field Blank/ Associated Samples	Analyte	Concentration	Qualification			
Field Blank All Samples	Total Dissolved Solids	11.0 mg/L	The associated sample results were reported at concentrations >10x the blank contamination, qualification was not considered necessary.			
<small>≥ – Greater Than or Equal To mg/L – Milligrams per Liter</small>						
13. Were instrument calibrations within method or data validation control limits?		NA	Yes	NA	No	JH Initials
Comments: Not applicable for the level of limited validation.						
14. Were surrogate/tracer recoveries within control limits?		X	Yes		No	JH Initials
Comments: The associated tracer recoveries were within control limits. Surrogate recoveries are not applicable for the analytical methods reported.						
15. Were laboratory control sample recoveries and relative percent difference (RPDs) within control limits?		X	Yes		No	JH Initials
Comments: LCS and/or LCSD percent recoveries and RPDs were within laboratory control limits.						
16. Were matrix spike recoveries and RPDs within control limits?			Yes	X	No	JH Initials
Comments: A matrix spike/matrix spike duplicate (MS/MSD) was performed on the following samples: <ul style="list-style-type: none"> • MW-20B for total metals, chloride, fluoride, sulfate, radium-226, and radium-228 • MW-38B for chloride, fluoride, sulfate With the exceptions listed in the table below, the MS/MSD spike recoveries and RPDs were within laboratory control limits.						
Associated Sample	Analyte	Recovery (Limits)	RPD (Limits)	Comment		
Data Package 280-192407-1						
MW-20B	Cobalt	90/91 (94-115)	0 (20)	As the potential bias was low, the associated sample results were qualified as estimated (UJ/J- m).		
	Chromium	90/90 (91-114)	0 (20)			
<small>J – Estimated Concentration, Biased Low m – Matrix spike/matrix spike duplicate recovery outlier</small>		<small>RPD – Relative Percent Difference UJ – Estimated non detect</small>				
Refer to the Table of Qualified Analytical Results.						
17. Were laboratory duplicate RPDs and/or serial dilution %Ds within control limits?		X	Yes		No	JH Initials
Comments: Laboratory duplicates were performed for anions, total dissolved solids, and radiological analyses and met laboratory control limits. Serial dilutions were not evaluated for this level of limited validation.						
18. Were organic system performance criteria met?		NA	Yes	NA	No	JH Initials

VALIDATION CRITERIA CHECK						
Comments: Not applicable for this level of limited validation, or for the methods reported.						
19. Were internal standards within method criteria for ICP-MS sample analyses?	NA	Yes	NA	No	JH	Initials
Comments: Not evaluated for this level of limited data validation.						
20. Were system performance criteria met?	NA	Yes	NA	No	JH	Initials
Comments: Not evaluated for this level of limited validation.						
21. Were field duplicates collected? If so, discuss the precision (RPD and/or RER) of the results.	X	Yes		No	JH	Initials
Duplicate Sample	Dup-01	Primary Sample	MW-38B			
<p>Comments: The duplicate sample pair met the acceptance criteria. The following criteria was used to evaluate the field duplicate results:</p> <ul style="list-style-type: none"> For results where both reported values were greater than five times the reporting limit (RL), the relative percent difference (RPD) between the results were $\leq 30\%$. For results where either value reported was less than five times the RL, the absolute difference between the results was compared to a criterion of agreement within $\pm 2xRL$. The replicate error ratio (RER) for radiochemical parameters was ≤ 2. 						
22. Were qualitative criteria for organic target analyte identification met?	NA	Yes	NA	No	JH	Initials
Comments: Not applicable for this level of limited data validation or for the methods reported.						
23. Were 10% of the EDD concentrations and reporting limits compared to the hardcopy data reports?	X	Yes		No	JH	Initials
Comments: During the validation procedure, 10% of the positive sample concentrations and RLs for project samples were compared to hardcopy laboratory reports.

Flag Definitions

J – The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.

J- - The result is an estimated quantity, but the result may be biased low.

U –

UJ – The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

Reason Code Definitions

bl – Laboratory Blank Contamination

lq – Trace Value

m – Matrix Spike Recovery Outliers

v – Compound Identification Issue

Limited Data Validation Report

Basin Electric Laramie, Wyoming
Second Semi-Annual Groundwater Monitoring
2024
Analyzed by Eurofins Environment Testing

Prepared By Delaine Austin
AECOM Chemist

Overview

The samples collected, analyzed, and validated during the semi-annual groundwater monitoring event are listed in the Table of Samples Validated.

Samples were submitted to Eurofins Environment Testing in Denver, Colorado and Eurofins Environment Testing in Saint Louis, Missouri.

Data were evaluated using guidance set forth in the *National Functional Guidelines for Inorganic Superfund Methods Data Review*, (November 2020), method requirements, and laboratory criteria, as applicable.

The following data components were reviewed during the data validation procedure:

Submitted Deliverables
Case Narratives (including any assigned laboratory flags)
Chain-of-Custody form(s) and sample integrity
Sample results, reporting limits, dilution factors
Holding times
Method (preparation) blank results
Field blank results
Laboratory control sample (LCS), laboratory control sample duplicate (LCSD) results
Matrix spike (MS), matrix spike duplicate (MSD) results
Laboratory duplicate (or spiked duplicate) results
Field duplicate (FD) results (calculated Relative Percent Differences [RPD])
Electronic data deliverables (EDDs) – EQulS format

Overall Data Assessment

Field and laboratory precision, field and laboratory accuracy, method compliance, and data set completeness are determined to be acceptable based on the data reported. As no data were missing or qualified as unusable, the completeness of the data set was considered 100% and is acceptable. All other reported data are suitable for their intended use with the qualifications and clarifications noted.

EB – Equipment Blank Sample
 FD – Field Duplicate Sample
 N – Normal Field Sample
 SDG – Sample Delivery Group

Project Name: Basin Electric Laramie River Station, Wyoming		Laboratory: Eurofins Environment Testing in Denver, Colorado, and in St Louis, Missouri					
Project Reference: Semi-Annual Groundwater Monitoring		Sample Matrix: Groundwater					
AECOM Project: 60732883.1.2		Sample Start Date: 9/25/2024					
Validator/Date Validated: Delaine Austin 11/7/2024		Sample End Date: 9/27/2024					
Secondary Review by: Jamie Herman		Secondary Review Date: 11/11/2024					
Samples Validated: See Table of Samples Validated							
Parameters Validated: Total Metals by SW-846 Methods 6010D, 6020B, and 7470A, Anions (Chloride, Fluoride, and Sulfate) by SW-846 Method 9056A, TDS by SM2540C, Radium-226 by SW-846 Method 9315, Radium-228 by SW-846 Method 9320, and Combined Radium							
Sample Delivery Groups (SDGs): 280-197290-1, 280-197290-2,							
PRECISION, ACCURACY, METHOD COMPLIANCE, AND COMPLETENESS ASSESSMENT							
Precision:		X	Acceptable		Unacceptable	DA	Initials
Comments: Precision is the measure of variability of individual sample measurements. Field precision was evaluated by reviewing the field duplicate results, and laboratory precision was evaluated by reviewing method duplicate sample results, laboratory control sample (LCS) to LCS duplicate (LCSD) results, and matrix spike (MS) to MS duplicate (MSD) results. Laboratory criteria was used to evaluate laboratory precision. Field and laboratory precision is acceptable as majority of the results are unqualified, and no data are missing or rejected. Precision measurements are reviewed in items 17 and 21.							
Accuracy:		X	Acceptable		Unacceptable	DA	Initials
Comments: Field accuracy, a measure of the sampling bias, can be determined by reviewing field and equipment blank results for evidence of sample contamination stemming from sampling activities and/or field conditions. Laboratory accuracy is a measure of the system bias, and was measured by evaluating LCS/LCSD, MS/MSD, tracer (radiological) percent recoveries (%Rs). LCS/LCSD %Rs demonstrated the overall performance of the analysis. MS/MSD and tracer %Rs provided information on sample matrix interferences. Accuracy measurements were evaluated using laboratory control limits. Overall field and laboratory accuracy is acceptable because the majority of the results are unqualified, and no data are missing or rejected. Accuracy measurements are reviewed in items 12, 14, 15, 16, and 20.							
Method Compliance:		X	Acceptable		Unacceptable	DA	Initials
Comments: Method compliance was determined by evaluating sample integrity, holding time, reporting limits, and laboratory blanks against method specified requirements. Overall method compliance is acceptable because the majority of the results were unqualified, and no data were missing or rejected. Method compliance measurements are also reviewed in items 4, 6, 8, 11, 13, 18, 19, 20, and 22.							
Completeness:		X	Acceptable		Unacceptable	DA	Initials
Comments: Completeness is the overall ratio of the number of samples planned versus the number of samples with valid analyses. Determination of completeness included a review of chain of custody records, laboratory analytical methods and reporting limits, laboratory case narratives, and project requirements. Completeness also included review of the laboratory sample data results, QC summary reports, and electronic data deliverables (EDDs). The completeness of the data set was considered 100% and is acceptable. All other reported data are suitable for their intended use as reported with the clarifications and qualifications noted.							

VALIDATION CRITERIA CHECK						
Data validation qualifiers potentially assigned during this review:						
J	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.					
J+	The result is an estimated quantity, but the result may be biased high.					
J-	The result is an estimated quantity, but the result may be biased low.					
R	The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.					
U	The analyte was analyzed for, but was not detected above the level of the adjusted detection limit or quantitation limit, as appropriate.					
UJ	The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.					
1. Did the laboratory identify any non-conformances related to the analytical results?	X	Yes		No	DA	Initials
Comments: Data qualification, if any, related to the narrative comments and/or assigned laboratory flags contained in the analytical reports are discussed in the following sections.						
2. Were sample Chain-of-Custody (COC) forms complete?	X	Yes	X	No	DA	Initials
Comments: Custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt.						
3. Were all the analyses requested for the samples on the COCs completed by the laboratory?		Yes	X	No	DA	Initials
Comments: All requested analyses, excluding those cancelled per request, were completed by the laboratory. Data Package 280-197290-2: The laboratory noted that pH analysis was included on the COC but subsequently cancelled as the parameter is performed in the field at the time of sample collection.						
4. Were samples received in good condition and at the appropriate temperature?	X	Yes		No	DA	Initials
Comments: All samples were received intact and within the recommended <6°C temperature, as applicable to the Methods.						
5. Were the reported analytical methods in compliance with WP/QAPP, permit, or COC?	X	Yes		No	DA	Initials
Comments: The reported target analytes and methods complied with parameters and methods listed on the COC.						
6. Were detection limits in accordance with WP/QAPP, permit, or method?		Yes	X	No	DA	Initials
Comments: No sample results were reported as non-detect at elevated reporting limits. Trace level detections, results reported between the method detection limit (MDL) and the reporting limit (RL) were qualified as estimated (J lq). For radiological parameters: <ul style="list-style-type: none"> • If the associated uncertainty was less than the reported result, no qualification was necessary. • If the associated uncertainty was greater than the reported result, and the 2 sigma (σ) uncertainty multiplied by 1.65 was less than or equal to the specified detection limit, no qualification was necessary. • If the associated uncertainty was greater than the reported result, and the 2 σ uncertainty multiplied by 1.65 was greater than the specified detection limit, then the associated sample and qualifications are included in the table below. 						

VALIDATION CRITERIA CHECK

Samples	Analyte	Result (pCi/L)	± 2 Sigma (σ) Uncertainty	MDC (pCi/L)	Qualification
Data Package 280-197290-1					
MW-20B-09252024	Combined Radium 226/228	0.319	0.336	0.5544	As the 2σ uncertainty multiplied by 1.65 was greater than the reported minimum detectable concentration (MDC), the associated results were qualified as estimated (J v).
	Radium-228	0.281	0.329	0.54285	
MW-38B-09272024	Radium-228	0.293	0.353	0.58245	
MW-38C-09272024	Radium-228	0.38	0.426	0.7029	
MW-41B-09262024	Combined Radium 226/228	0.34	0.365	0.60225	
	Radium-228	0.311	0.355	0.58575	
MW-49B-09252024	Combined Radium 226/228	0.306	0.317	0.52305	

σ – Sigma
± – Plus or Minus
MDC – Minimum Detectable Concentration

pCi/L – Picocuries per Liter
J – Estimated Concentration
v – Compound Identification Issue

Refer to the Table of Qualified Analytical Results.

7. Do the laboratory reports include only those constituents requested to be reported for a specific analytical method?	X	Yes		No	DA	Initials
---	----------	-----	--	----	----	----------

Comments: Only the requested target analytes were reported.

8. Were sample holding times met?	X	Yes		No	DA	Initials
-----------------------------------	----------	-----	--	----	----	----------

Comments: The sample preparation and analytical holding times were within the Method requirements.

9. Were correct concentration units reported?	X	Yes		No	DA	Initials
---	----------	-----	--	----	----	----------

Comments: Yes, the correct concentration units were reported.

10. Were the reporting requirements for flagged data met?	X	Yes		No	DA	Initials
---	----------	-----	--	----	----	----------

Comments: Laboratory flags were reviewed and considered during the data validation procedure. Data validation qualifiers override assigned laboratory flags.

11. Were laboratory blank samples free of target analyte contamination?		Yes	X	No	DA	Initials
---	--	-----	----------	----	----	----------

Comments: With the following exceptions, the laboratory blanks were free of target analyte contamination, and radiological parameter results were less than the MDC.

Laboratory Blank/Associated Samples	Analyte	Concentration	Qualification
Data Package 280-197290-2			
MB 280-669240/1-A MW-38C-09272024 EB-09272024	Boron	3.486 µg/L	As the associated sample results were non-detect or reported at concentrations >10x the blank concentration, data qualification was not considered necessary.
MB 280-669287/1-A DUP-01-09272024 MW-32B-09262024 MW-36B-09272024 MW-38B-09272024 MW-38C-09272024 MW-39B-09262024 MW-40B-09262024 MW-41B-09262024 MW-42B-09262024 MW-43B-09262024 MW-44B-09262024 MW-45B-09262024 MW-46B-09272024 MW-47B-09262024 MW-49B-09252024	Total Dissolved Solids	5.000 mg/L	The associated sample results were reported at concentrations >10x the blank contamination, qualification was not considered necessary.

VALIDATION CRITERIA CHECK

Qualification was not considered necessary for the associated samples reported at concentrations < MDC.

> - Greater Than
 mg/L - Milligrams per Liter
 µg/L - Micrograms per Liter

MB - Method Blank
 pCi/L - Picocuries per Liter

Refer to the Table of Qualified Analytical Results.

12. Were trip blank, field blank, and/or equipment rinse blank samples free of target analyte contamination?		Yes	X	No	DA	Initials
--	--	-----	----------	----	----	----------

Comments: A trip blank and field blank were not required for this sampling event. One equipment blank was collected, and with the exceptions noted below, the equipment blank was free of target analyte contamination, and radiological parameter results were less than the MDC.

Equipment Blank/ Associated Samples	Analyte	Blank Concentration	Qualification
EB-09272024 All Samples	Total Dissolved Solids	20.0 mg/L	The associated sample results were reported at concentrations >10x the blank contamination, qualification was not considered necessary.
	Calcium	137 µg/L	
	Barium	1.01 µg/L	

> - Greater Than
 mg/L - Milligrams per Liter
 µg/L - Micrograms per Liter

EB = Equipment Blank

13. Were instrument calibrations within method or data validation control limits?	NA	Yes	NA	No	DA	Initials
---	-----------	-----	-----------	----	----	----------

Comments: Not applicable for the level of limited validation.

14. Were surrogate/tracer recoveries within control limits?	X	Yes		No	DA	Initials
---	----------	-----	--	----	----	----------

Comments: The associated tracer recoveries were within control limits. Surrogate recoveries are not applicable for the analytical methods reported.

15. Were laboratory control sample recoveries and relative percent difference (RPDs) within control limits?		Yes	X	No	DA	Initials
---	--	-----	----------	----	----	----------

Comments: With the exception below, the LCS and/or LCSD percent recoveries and RPDs were within laboratory control limits.

LCS Identification/ Associated Sample	Analyte	Recovery (Limits)	RPD (Limits)	Comment
Data Package 280-197290-1				
LCS 160-681953/2-A MW-38C-09272024 EB-09272024	Radium 228	128 (75-125)	N/A	As the potential bias was high, and the associated sample results were reported at <MDC, data qualification was not necessary.

< - Less Than
 MDC - Minimum Detectable Concentration

RPD - Relative Percent Difference

VALIDATION CRITERIA CHECK																														
16. Were matrix spike recoveries and RPDs within control limits?		Yes	X	No	DA	Initials																								
<p>Comments: A matrix spike/matrix spike duplicate (MS/MSD) was performed on the following samples:</p> <ul style="list-style-type: none"> MW-21B-09272024 for total metals, chloride, fluoride, sulfate, radium-226, and radium-228 MW-40B-09262024 for chloride, fluoride <p>With the exceptions listed in the table below, the MS/MSD spike recoveries and RPDs were within laboratory control limits.</p> <p>Results in the native sample greater than 4x the concentration of the spike added during digestions/extractions are not considered to be a representative measure of accuracy. Further action with respect to spike recovery evaluation or qualification of data was not considered necessary.</p> <table border="1"> <thead> <tr> <th>Associated Sample</th> <th>Analyte</th> <th>Recovery (Limits)</th> <th>RPD (Limits)</th> <th>Comment</th> </tr> </thead> <tbody> <tr> <td colspan="5" style="text-align: center;">Data Package 280-197290-2</td> </tr> <tr> <td rowspan="4">MW-21B-09272024</td> <td>Arsenic</td> <td>91/91 (92-112)</td> <td>1 (20)</td> <td rowspan="4">As the potential bias was low, the associated sample results were qualified as estimated (UJ/J- m).</td> </tr> <tr> <td>Selenium</td> <td>85/99 (90-115)</td> <td>11 (20)</td> </tr> <tr> <td>Thallium</td> <td>93/95 (94-115)</td> <td>3 (20)</td> </tr> <tr> <td>Fluoride</td> <td>79/79 (80-120)</td> <td>0 (20)</td> </tr> </tbody> </table> <p>J – Estimated Concentration, Biased Low m – Matrix spike/matrix spike duplicate recovery outlier RPD – Relative Percent Difference UJ – Estimated non detect</p>							Associated Sample	Analyte	Recovery (Limits)	RPD (Limits)	Comment	Data Package 280-197290-2					MW-21B-09272024	Arsenic	91/91 (92-112)	1 (20)	As the potential bias was low, the associated sample results were qualified as estimated (UJ/J- m). Refer to the Table of Qualified Analytical Results.																														
17. Were laboratory duplicate RPDs and/or serial dilution %Ds within control limits?		X	Yes	No	DA	Initials																								
Comments: Laboratory duplicates were performed for anions, total dissolved solids, and radiological analyses and met laboratory control limits. Serial dilutions were not evaluated for this level of limited validation.																														
18. Were organic system performance criteria met?		NA	Yes	NA	No	DA	Initials																							
Comments: Not applicable for this level of limited validation, or for the methods reported.																														
19. Were internal standards within method criteria for ICP-MS sample analyses?		NA	Yes	NA	No	DA	Initials																							
Comments: Not evaluated for this level of limited data validation.																														
20. Were system performance criteria met?		NA	Yes	NA	No	DA	Initials																							
Comments: Not evaluated for this level of limited validation.																														
21. Were field duplicates collected? If so, discuss the precision (RPD and/or RER) of the results.		X	Yes	No	DA	Initials																								
Duplicate Sample	Dup-01	Primary Sample		MW-38B																										
<p>Comments: The duplicate sample pair met the acceptance criteria. The following criteria was used to evaluate the field duplicate results:</p> <ul style="list-style-type: none"> For results where both reported values were greater than five times the reporting limit (RL), the relative percent difference (RPD) between the results were ≤30%. For results where either value reported was less than five times the RL, the absolute difference between the results was compared to a criterion of agreement within ±2xRL. The replicate error ratio (RER) for radiochemical parameters was ≤2. 																														
22. Were qualitative criteria for organic target analyte identification met?		NA	Yes	NA	No	DA	Initials																							
Comments: Not applicable for this level of limited data validation or for the methods reported.																														

VALIDATION CRITERIA CHECK						
23. Were 10% of the EDD concentrations and reporting limits compared to the hardcopy data reports?	X	Yes		No	DA	Initials
Comments: During the validation procedure, 10% of the positive sample concentrations and RLs for project samples were compared to hardcopy laboratory reports.

Flag Definitions

J – The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.

J- - The result is an estimated quantity, but the result may be biased low.

J+ - The result is an estimated quantity, but the result may be biased high.

UJ – The analyte was analyzed for but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

Reason Code Definitions

lq – Trace Value

m – Matrix Spike Recovery Outliers

bl - Laboratory blank contamination

v - Compound Identification Issue

79	95% Chebyshev UPL					1.765	99% Percentile					1.048	
80	95% USL					1.07							
81													
82	Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20.												
83	Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers												
84	and consists of observations collected from clean unimpacted locations.												
85	The use of USL tends to provide a balance between false positives and false negatives provided the data												
86	represents a background data set and when many onsite observations need to be compared with the BTV.

236	Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20.											
237	Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers											
238	and consists of observations collected from clean unimpacted locations.											
239	The use of USL tends to provide a balance between false positives and false negatives provided the data											
240	represents a background data set and when many onsite observations need to be compared with the BTV.

569	95% USL				2200	95% KM Chebyshev UPL				3925			
570													
571	Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20.												
572	Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers												
573	and consists of observations collected from clean unimpacted locations.												
574	The use of USL tends to provide a balance between false positives and false negatives provided the data												
575	represents a background data set and when many onsite observations need to be compared with the BTV.
