Executive Summary

This report summarizes groundwater monitoring and corrective action activities completed between January 1 and December 31, 2020 at the Coal Combustion Residuals (CCR) Landfill at Leland Olds Station (LOS), as required by 40 Code of Federal Regulations (CFR) Section 257.90(e) of the United States Environmental Protection Agency (USEPA) CCR Rule.

The location of the CCR units and program monitoring network for the CCR units, including supporting monitoring wells are illustrated on **Figures 1 and 2**, respectively. No program monitoring wells were modified or abandoned during the reporting period. Accordingly, the unit remains in Detection monitoring into the next year.

Detection-mode groundwater monitoring of the CCR Landfill was initiated in 2018. Detection monitoring through October 2020 identified no statistically significant increases (SSIs) of Appendix III indicators of boron, calcium, chloride, fluoride, pH, sulfate, and total dissolved solids (TDS) in the downgradient monitoring wells MW-2016-2, MW-2016-9, MW-2016-10, and MW-2016-11.

Other activities and conditions for the 2020 annual reporting period include:

- Semiannual Detection-mode groundwater monitoring events were conducted in June and September/October. Monitoring involved sampling of five background monitoring wells and four downgradient monitoring wells.
- No well repair, or decommissioning of the existing program monitoring networks was conducted.
- No program transitions (Detection to Assessment or vice versa) were triggered.
- No programmatic problems were encountered, so no remedies were required.

Anticipated activities for the next annual reporting period include:

- Completion of two semiannual Detection-mode groundwater monitoring events.
- Statistical evaluation of groundwater data for Appendix III indicators.

1. Introduction

On behalf of Basin Electric Power Cooperative, (Basin), AECOM Technical Services, Inc. (AECOM) has prepared the 2020 annual report documenting groundwater monitoring and corrective action for the Glenharold Coal Combustion Residuals (CCR) Landfill at Basin's Leland Olds Station (LOS).

Chapter 1 provides background information on the power generating facility, the CCR unit(s) present at the facility, and the physical setting of the CCR unit(s), specifically with regard to groundwater conditions. Chapter 2 summarizes CCR groundwater monitoring activities conducted prior to the current reporting year. Chapter 3 summarizes the groundwater monitoring and corrective action activities completed in the current reporting year, and references attachments to this report that contain detailed documentation of those activities. Chapter 4 reports on general information including program transitions, problems encountered and anticipated activities for the coming year. Chapter 5 summarizes the report content. Chapter 6 lists references cited in this report.

Regulatory Background

The CCR rule, effective on October 19, 2015, established standards for the disposal of CCR in landfills and surface impoundments (CCR units). In particular, the rule set forth groundwater monitoring and corrective action requirements for CCR units. The rule includes the requirement for an "annual groundwater monitoring and corrective action report" (annual report), submitted to the operating record annually on or before January 31 of the year following the monitoring period. The annual report is intended to document the status of the groundwater monitoring and corrective action program for each CCR unit, summarize key actions completed in the previous year, and project key activities for the upcoming year. This report is the fourth annual report, and includes activities performed in calendar year 2020.

Facility Location and Operational History

LOS is a coal-based generating station located southeast of Stanton, North Dakota (**Figure 1**). The plant, which began operating in 1966 consists of two power generating units with a total power output capacity of 669 megawatts.

CCR produced at LOS includes fly ash, bottom ash, and flue gas desulfurization (FGD) waste.

CCR Unit Description

CCR is disposed at LOS in the following CCR unit:

- CCR Landfill

The CCR Landfill is located approximately 3 miles southwest of the generating units and office complex, in an area of mine spoils (**Figure 1**). Basin reported that in 2020 the LOS CCR Landfill received approximately 264,303 tons of solid waste, including fly ash, FGD waste, and a minor contribution of solid debris.

Physical Setting

The geology underlying the site includes mine spoils underlain by the Sentinel Butte Formation. This formation is comprised of continental deposits in excess of 1,000-feet thick, consisting of dense clay, weakly cemented sandstone, mudstone, and lignite beds.

The topography of the surrounding areas consists of alluvial terraces and historic mine spoils. Much of the surrounding mined areas have historically been developed such that precipitation outside of the landfill footprint is generally redirected as surface water runoff toward drainage ditches and culverts that drain to Alderin Creek and ultimately to the Missouri River. Groundwater is recharged primarily through regional infiltration of melt water in the spring.

The base of the LOS CCR Landfill is underlain by approximately 50 feet of clay-rich mine spoil that overlies the Lower Sentinel Butte Formation. At the site, the Sentinel Butte is comprised primarily of dense clay with trace very fine sand

and sparse beds of lignite typically ranging from 6- to 9-feet thick. The 2016 AECOM drilling investigation did not penetrate to depths great enough to expose the lower portions of the Sentinel Butte.

The uppermost aquifer is found within the 6- to 9-foot unmined lignite bed located at depths ranging roughly from 86 to 125 feet below ground surface (ft, bgs). The potentiometric surface of the uppermost groundwater present within the lignite is approximately 1880 feet above mean sea level (ft, amsl) in the southern portion of the Landfill facility sloping generally north-northeast to 1843 ft., amsl on the northern side of the landfill. Aquifer testing completed at monitoring wells MW-2016-4, MW-2016-8, and MW-2016-10 indicates an average hydraulic conductivity of 1.52×10^{-5} centimeters per second (cm/sec) for the saturated materials.

2. CCR Groundwater Monitoring Activity Prior to 2020

The regulatory process for CCR groundwater monitoring and corrective action is established by 40 Code of Federal Regulations (CFR) Sections 257.90 through 257.98. The process includes a phased approach to groundwater monitoring, leading (if applicable) to the establishment of groundwater protection standards (GWPSs) for each CCR unit. Exceedances of the GWPSs that are determined to be statistically significant can trigger requirements for additional groundwater characterization and Assessment of Corrective Measures (ACMs) followed by selection of remedy and remedy implementation.

The following paragraphs provide a brief summary of CCR groundwater monitoring activities performed prior to 2020. CCR groundwater monitoring activities performed between January and December 2020 are discussed in Chapter 3.

Groundwater monitoring at the CCR Landfill is performed using a network of monitoring wells that include both wells to monitor background water quality that is not potentially influenced by the presence of the CCR unit, and wells placed at the downgradient boundary of the unit (**Figure 2**). The hydrostratigraphic positions of the CCR monitoring wells selected for sampling background and downgradient groundwater quality for the LOS CCR Landfill are summarized below:

CCR unit	Background wells	Downgradient wells
Landfill	MW-2016-3, MW-2016-4, MW-2016-5, MW-2016-6, MW-2016-8	MW-2016-2, MW-2016-9, MW-2016-10, MW-2016-11

Two monitoring wells are excluded from the groundwater monitoring network due to deficiencies. Monitoring well MW-2016-1 is excluded due to insufficient water production to obtain a representative sample. However, it remains in place for collection of groundwater level measurements for potential inclusion in the potentiometric map evaluation as appropriate. Monitoring well MW-2016-7 is excluded due to screen interval placement that is not representative of the uppermost aquifer monitoring at the site.

Baseline monitoring, initiated in August 2016, involved sampling groundwater for Appendix III and IV constituents over eight Baseline Detection monitoring events.

Baseline Detection monitoring events were performed in general accordance with procedures established in the site-specific Sampling and Analysis Plan (AECOM 2018a), which is included in the facility's Operating Record. The Sampling and Analysis Plan describes the procedures for equipment calibration, monitoring well water level measurement, monitoring well purging and sampling, sample custody, sample shipping, laboratory analysis and documentation requirements for each groundwater sample submitted. The results of the Baseline monitoring and 2018 Detection monitoring at the LOS CCR Landfill were presented and discussed in the First and Second Annual Groundwater Monitoring and Corrective Action Reports, (AECOM 2018b and AECOM 2019). The LOS CCR Landfill was placed in Detection monitoring in the winter of 2018 with the first Detection monitoring groundwater sampling event completed in April 2018 then twice annually thereafter. The results of Detection monitoring at the LOS CCR Landfill in 2018 and 2019 were presented and discussed in the Second and Third Annual Groundwater Monitoring and Corrective Action Reports issued on January 31, 2019 (AECOM 2019) and January 31, 2020 (AECOM 2020), respectively.

3. CCR Groundwater Monitoring and Corrective Action Activities in 2020

This chapter summarizes the groundwater monitoring and corrective action conducted at the LOS CCR Landfill in 2020 to comply with the groundwater requirements of the CCR rule:

- Groundwater Detection Monitoring activities
 - monitoring system evaluation completed in June and October 2020
 - groundwater sampling completed in June and October 2020
 - laboratory analysis of groundwater samples in June and October 2020
- Statistical analysis of the monitoring results of the groundwater samples in June and October 2020
- Groundwater Corrective Action – Not applicable

Further details concerning each of these activities, including a brief discussion of work completed during the reporting period are provided below.

Detection Monitoring Activities

Monitoring System Evaluation

As described in the CCR Groundwater Monitoring System Report (AECOM 2017), monitoring wells were installed around the CCR unit at LOS with appropriate total depth and placement of the well screen to: (1) facilitate collection of representative groundwater samples from the uppermost aquifer, and (2) accurately measure water table elevations to support evaluation of groundwater gradient and flow direction. All monitoring wells comprising the LOS CCR Landfill monitoring system were found to be in good condition during the Detection Monitoring events conducted in 2020.

Potentiometric surface maps constructed using the depth-to-groundwater measurements obtained at the beginning of each Detection monitoring event are presented in **Attachment A**. The direction of groundwater flow observed in June and October 2020 was generally north-northeast, which is consistent with the direction observed in previous years. The flow direction supports the designation of the wells noted in Section 2 above to represent background groundwater quality and the quality of groundwater downgradient of the unit.

Groundwater Sampling and Analysis

The Detection monitoring events completed in 2020 included analysis of collected groundwater samples for the constituents listed in Part 257 Appendix III. The tabulated laboratory analytical results are presented in **Attachment A** along with potentiometric surface maps for the uppermost aquifer, inferred groundwater flow direction and estimated velocities, and a tabulated summary of field measurements.

Sampling and analysis was performed in general accordance with procedures established in the Sampling and Analysis Plan (AECOM 2018a).

Statistical Procedures and Analysis

The cumulative groundwater data collected for Appendix III indicator parameters at the LOS CCR Landfill were evaluated in accordance with the statistical procedures certified on October 17, 2017 (AECOM 2017).

The Appendix III groundwater quality data were evaluated using an interwell approach that statistically compares constituent concentrations at downgradient monitoring wells to those present at background monitoring wells. For LOS

CCR Landfill, monitoring wells MW-2016-3, MW-2016-4, MW-2016-5, MW-2016-6, and MW-2016-8 are designated as the background wells because they are located upgradient of the LOS CCR Landfill, whereas the remaining monitoring wells (MW-2016-2, MW-2016-9, MW-2016-10, and MW-2016-11) are located downgradient of the facility.

Prediction limits (i.e., parametric, or nonparametric) were developed for each constituent, except boron, based on the frequency of non-detect values and whether the background data for that constituent exhibited a normal, lognormal, or nonparametric distribution. Analytical data from the background monitoring wells collected between September 2016 and October 2020 were used to develop an upper prediction limit (UPL) for the Appendix III background data at 95 percent confidence. A lower prediction limit (LPL) was also developed for pH which is a two-sided parameter. ProUCL Version 5.1 was used to store the data and run the statistical analyses.

Data from the downgradient monitoring wells through October 2020 were compared to the UPL or LPL to identify statistically significant increases (SSIs) over background. Mann-Kendall trend analysis was used to identify statistically significant increasing trends for constituents with SSIs. ProUCL Version 5.1 was used to store the background data and run the statistical analyses.

The statistical analysis results indicate that none of the Appendix III parameters (boron, calcium, chloride, fluoride, pH, sulfate, and total dissolved solids [TDS]) currently exhibit SSIs over background. The analysis also indicated that pH did not exhibit an SSI below background. The results of the analyses, including the UPLs and LPL, are provided in **Table 1**.

Boron was further evaluated using a control chart provided in **Figure 3**. Upper and lower control limits were developed as the mean \pm 4.5 standard deviations using the boron data for monitoring wells MW-2016-3, MW-2016-4, MW-2016-5, MW-2016-6, and MW-2016-8. Starks 1988¹; EPA 2009²; ASTM 2017³ suggest using 4.5 standard deviations to develop control limits for groundwater detection monitoring. A control chart that shows the background mean (0.253 milligrams per liter [mg/L]), upper and lower control limits (UCL and LCL), 0.332 and 0.175 mg/L, respectively, and the baseline and detection monitoring results for downgradient compliance wells MW-2016-2, MW-2016-9, MW-2016-10, and MW-2016-11 through June 2020 is provided as **Figure 3**. The results depicted on **Figure 3** indicate that boron does not exceed the UCL at monitoring wells MW-2016-2, MW-2016-9, MW-2016-10, and MW-2016-11 for any sampling event. Therefore, boron does not currently exhibit a SSI over background at any of the downgradient compliance wells.

Based on these results, assessment monitoring is not required at Leland Olds Station Landfill. Detection monitoring should continue at the LOS Landfill in 2021.

4. General Information

The following subsections summarize any problems encountered in the LOS CCR Landfill program through 2020, any resolutions to those problems, if needed and upcoming actions planned for 2021.

Program Transitions 2020

There were no groundwater monitoring program transitions for the LOS CCR Landfill monitoring system during the January – December 2020 reporting period.

Problems Encountered

No problems were encountered during the December – January 2020 monitoring period.

Actions Planned for 2021

Basin plans on continuing the Detection Monitoring program for the LOS CCR Landfill in 2021. The Detection Monitoring program will include semi-annual groundwater sampling events and the required statistical evaluations.

5. Summary and Conclusions

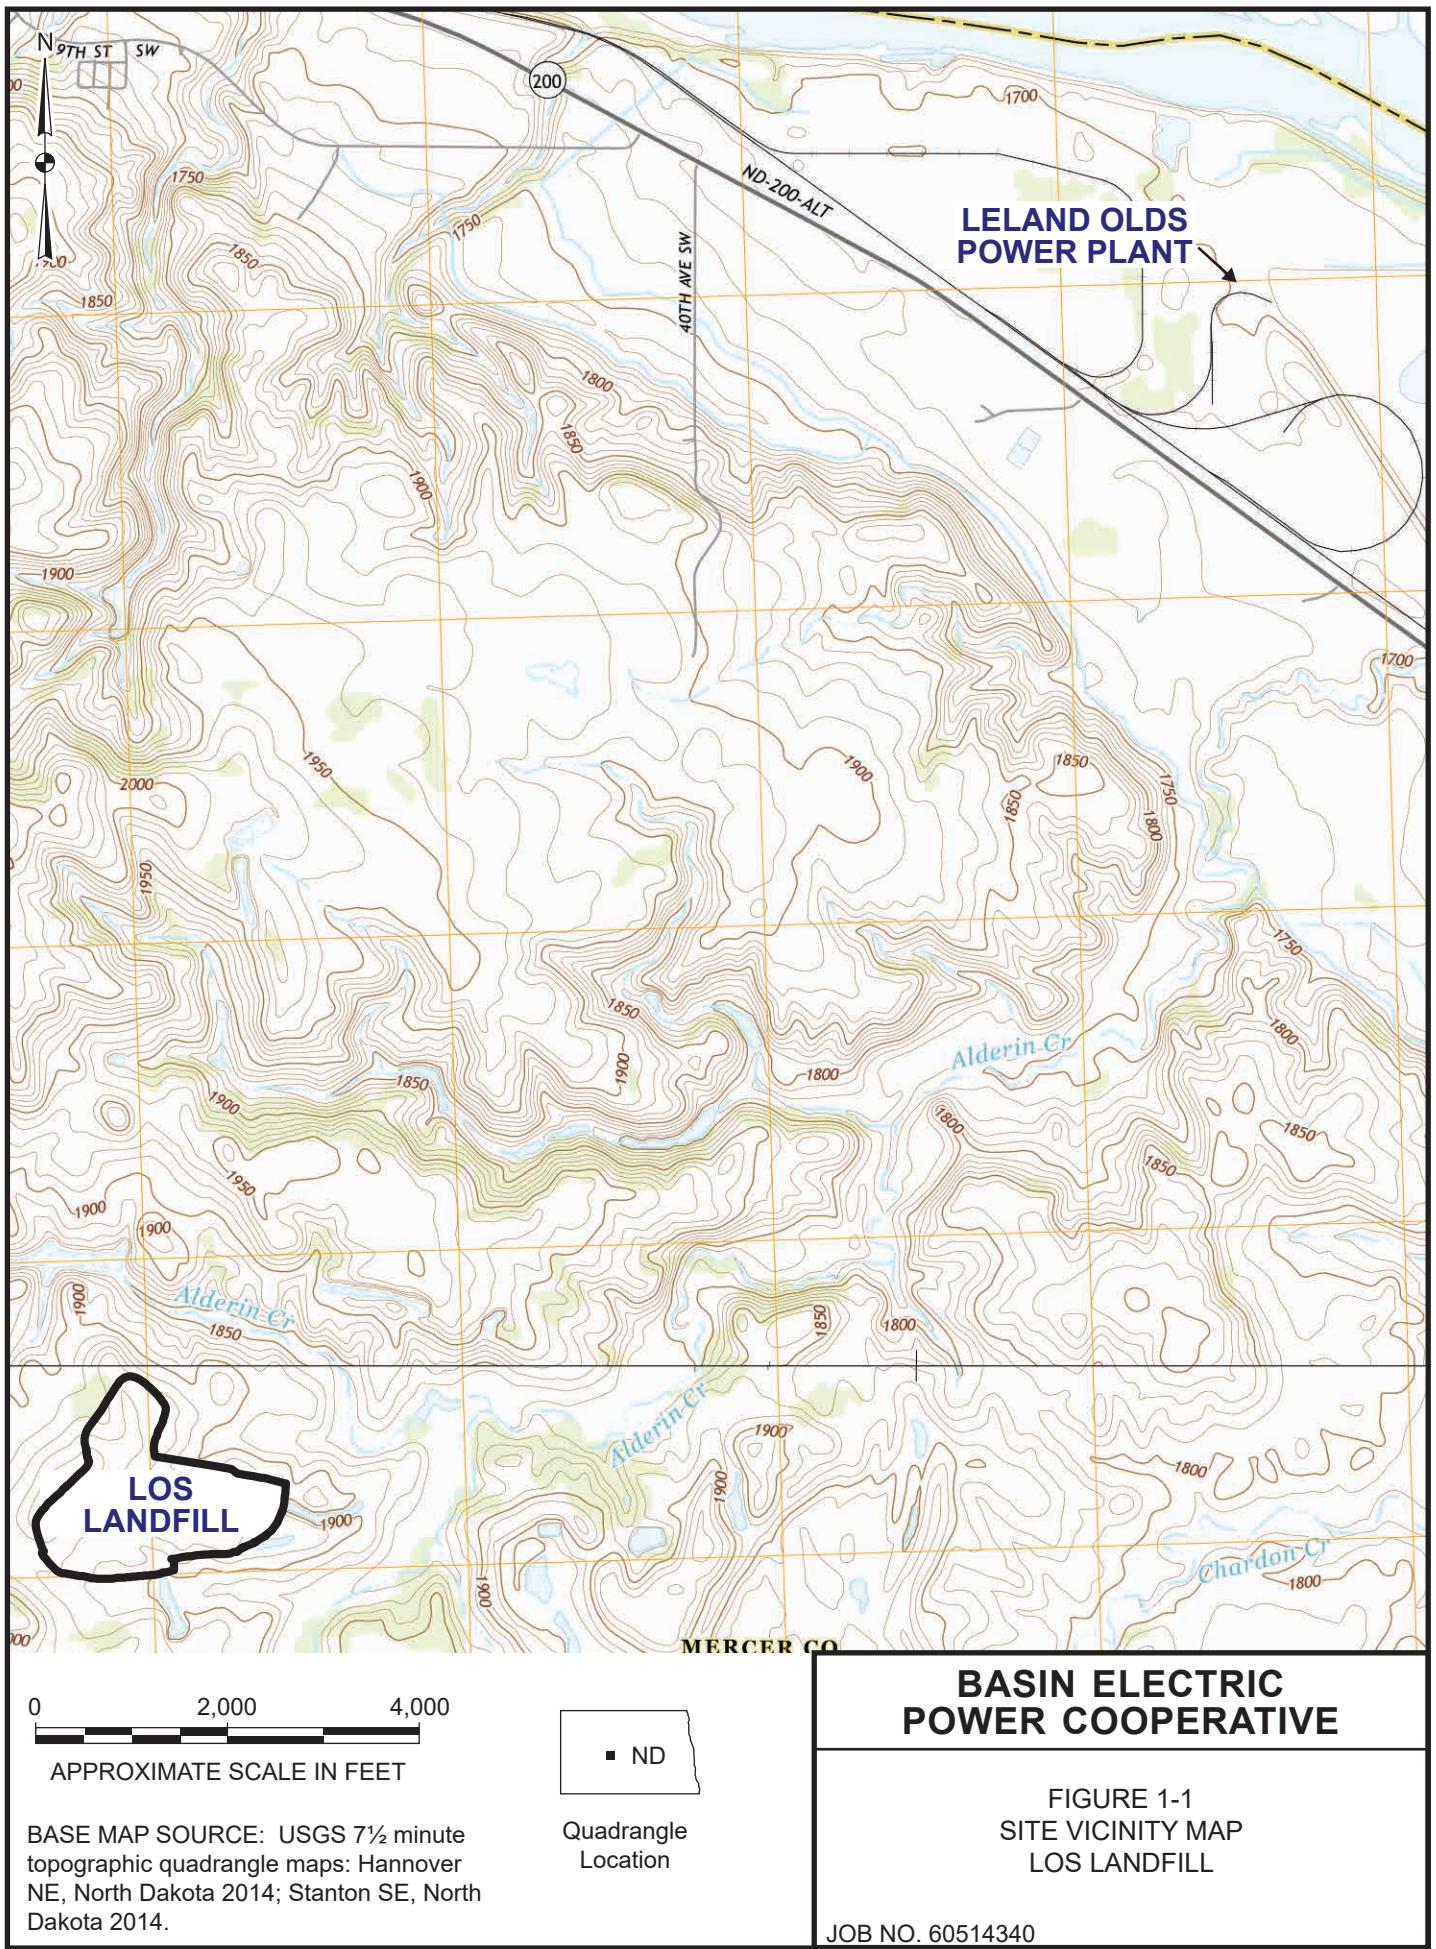

Basin conducted two rounds of CCR groundwater Detection Monitoring at the LOS CCR Landfill between January and December in 2020. The results were used to establish background groundwater quality for Appendix III constituents in the uppermost aquifer, identify appropriate UPLs and LPL, and determine whether any Appendix III constituents experienced SSIs downgradient of the CCR unit.

The statistical analysis results indicate that none of the Appendix III constituents had SSIs over background or statistically significant increasing trends in constituent concentrations. Based on these results, Assessment monitoring is not required at the LOS CCR Landfill. Detection Monitoring will continue at the site in 2021.

1. Introduction

On behalf of Basin Electric Power Cooperative (Basin), AECOM Technical Services, Inc. (AECOM) prepared this Coal Combustion Residuals (CCR) Groundwater Sampling and Analysis Report for the Basin Leland Olds Station (LOS) CCR Landfill.

This Sampling and Analysis Report was prepared to present the results of sampling and analysis of groundwater conducted for the monitoring requirements of the United States Environmental Protection Agency (EPA) CCR rule (Chapter 40 of the Code of Federal Regulations (CFR), Sections 257.90 to 257.98). Specifically, the report presents the data collected for the two groundwater Detection monitoring events conducted in 2020.

2. Groundwater Flow

As required by 40 CFR Section 257.93(c), groundwater elevations were measured in each well prior to purging, each time groundwater was sampled. The measurements, presented in **Table 1**, were used to create potentiometric surface maps for the uppermost aquifer for the Detection monitoring events. The resulting potentiometric surface maps were used to evaluate the direction and rate of groundwater flow across the subject CCR unit. **Figure 1** and **Figure 2** represent potentiometric surface maps constructed using measurements taken on June 9, 2020 and September 30, 2020, respectively. The maps show the inferred groundwater flow directions for the CCR unit, which are generally consistent with the patterns observed during previous monitoring events. Calculated groundwater flow velocities are summarized in **Table 2**.

Based on the groundwater flow conditions documented in this chapter, the relative functions of the monitoring wells employed in the LOS CCR Landfill groundwater monitoring system are as follows:

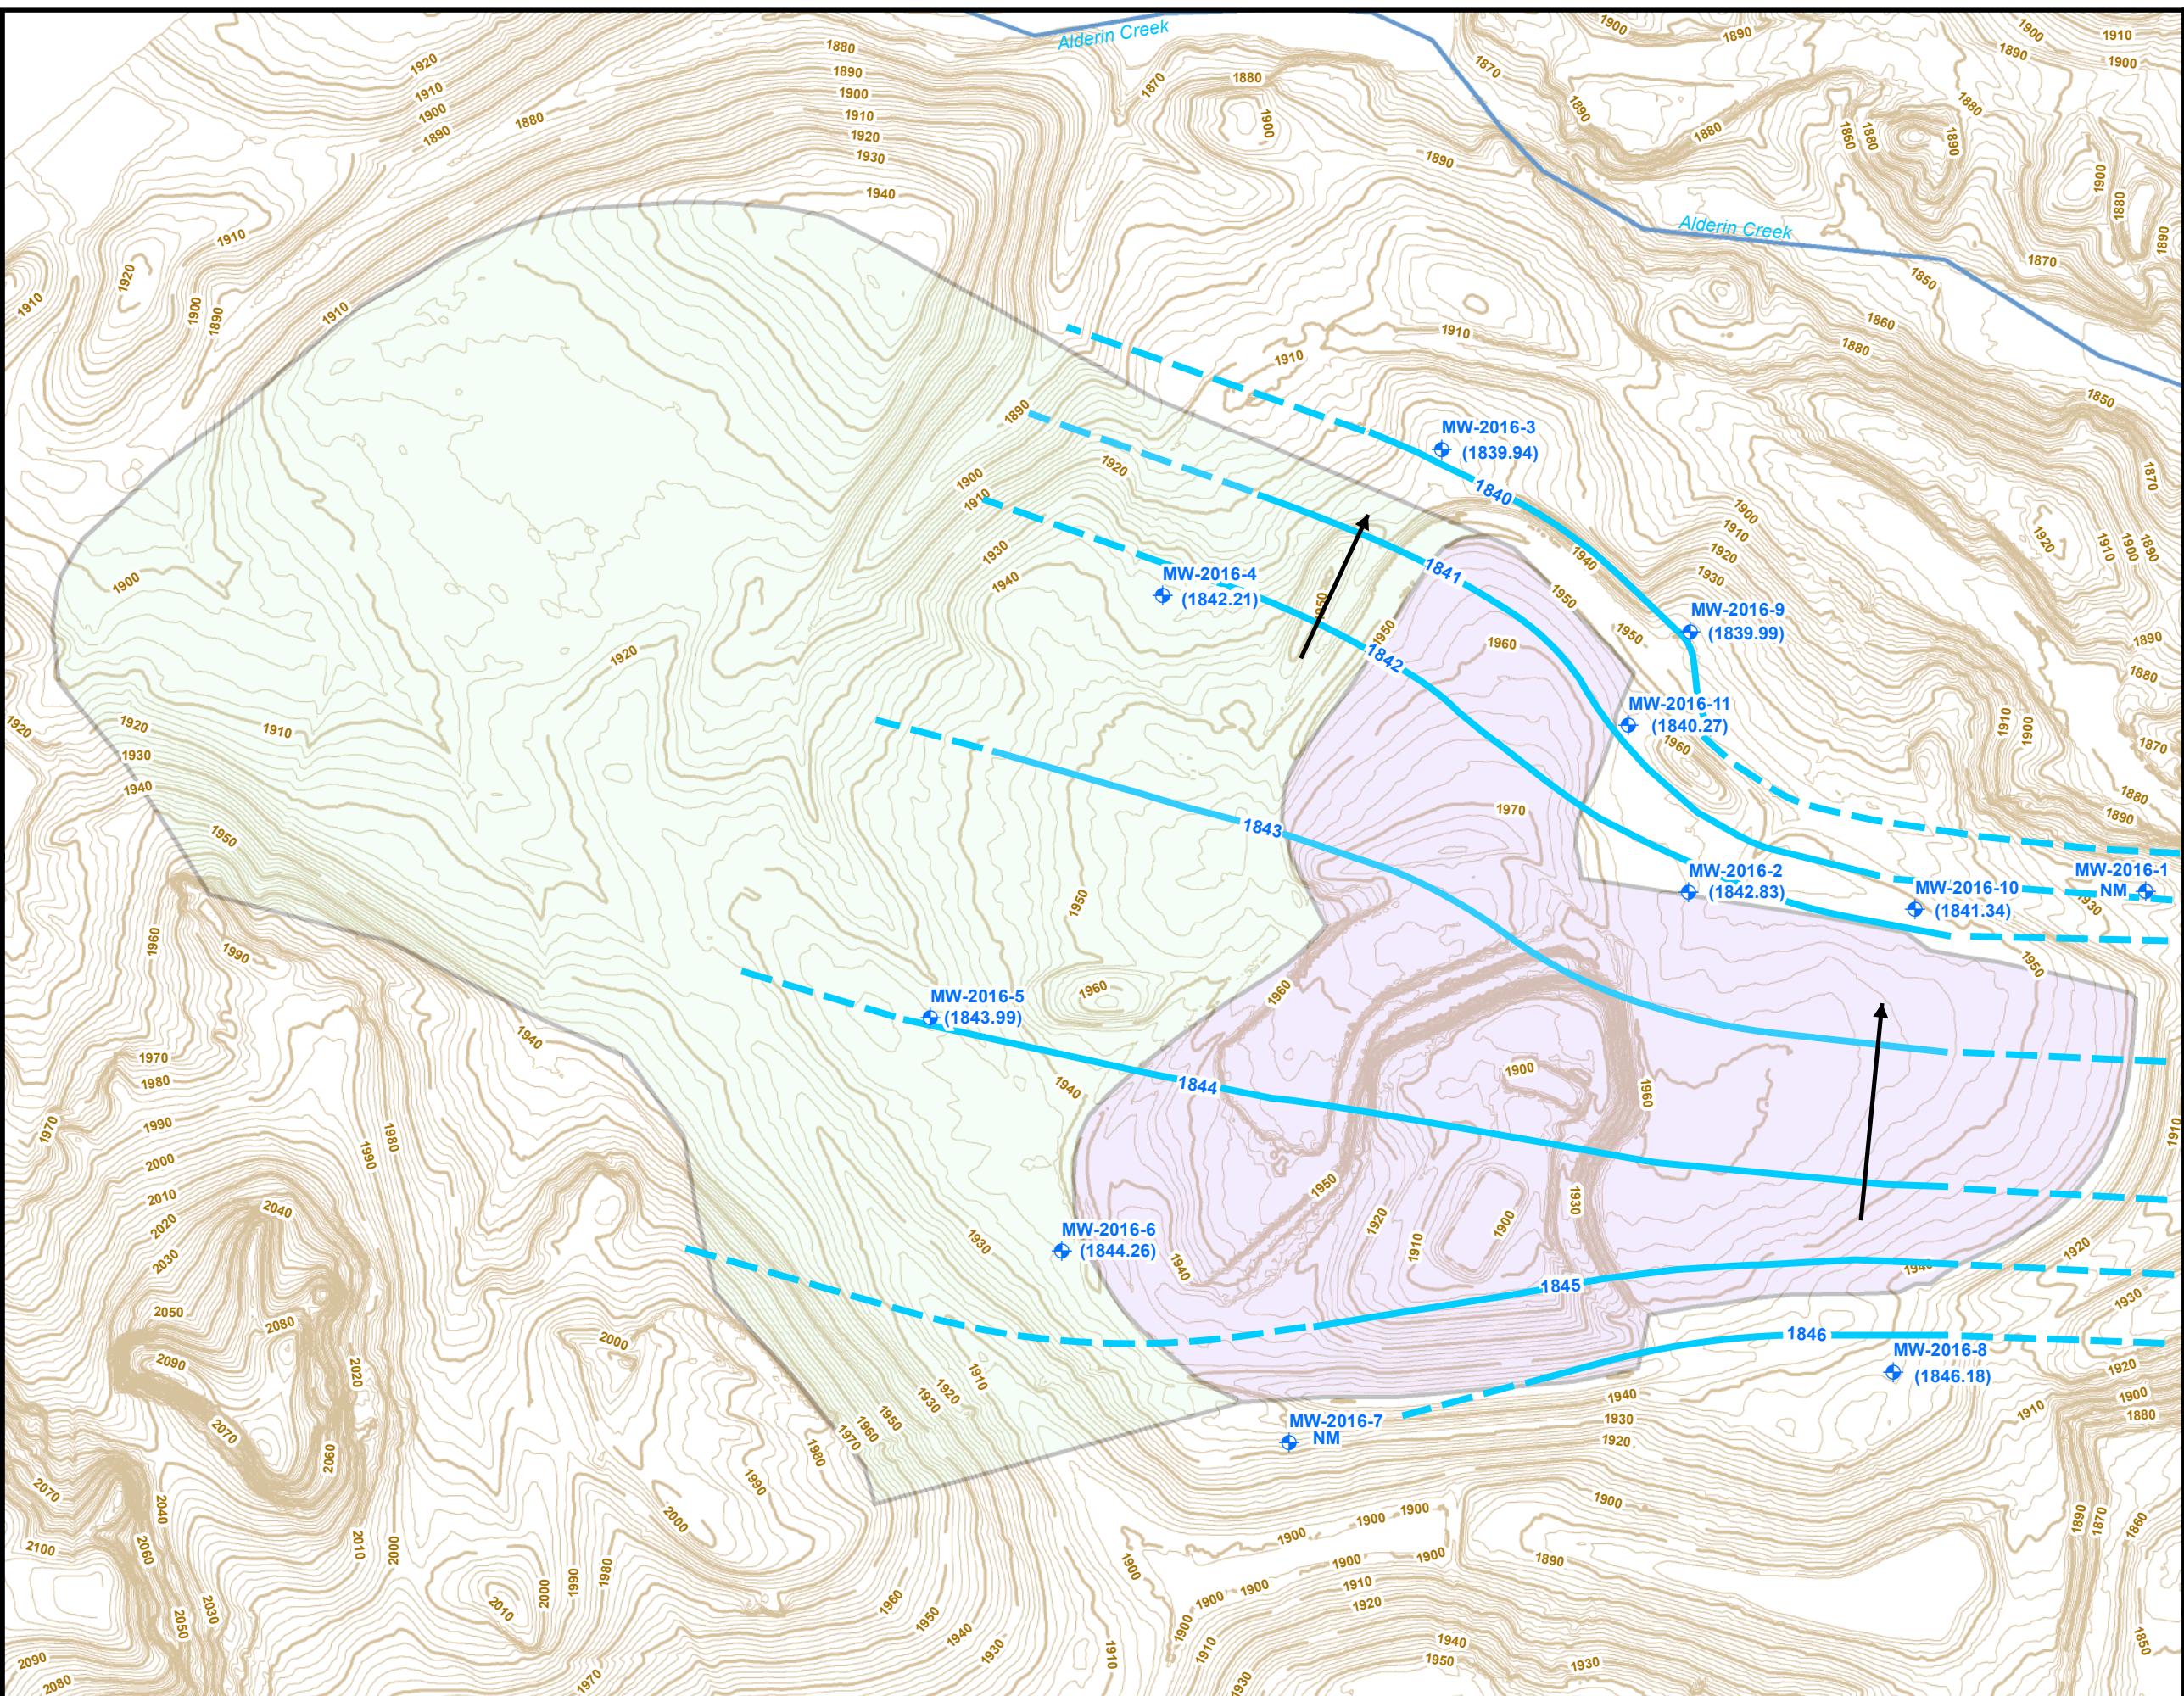

CCR unit	Background wells	Downgradient wells
Landfill	MW-2016-3, MW-2016-4, MW-2016-5, MW-2016-6, MW-2016-8	MW-2016-2, MW-2016-9, MW-2016-10, MW-2016-11

Monitoring wells MW-2016-1 and MW-2016-7 are excluded from the groundwater monitoring network. MW-2016-1 is excluded due to insufficient water production to obtain a representative sample. MW-2016-7 is excluded due to inappropriate screen placement to monitor uppermost groundwater. However, both remain in place for optional collection of groundwater level measurements for potential use in potentiometric mapping as appropriate. Groundwater level measurements at MW-2016-1 and MW-2016-7 were not recorded in 2020.

3. Groundwater Quality

The analytical testing laboratory provided reports presenting the results of laboratory analysis for each monitoring event. These laboratory reports are included in the operating record, are presented in **Appendix I**, and were reviewed for completeness against the project-required methods and the chain-of-custody forms. Laboratory reports were also reviewed for holding times, and that the data was appropriately flagged based on the quality assurance/quality control (QA/QC) testing results provided by the laboratory. The results were compiled into summary form as presented in **Table 3**.

d_l = Horizontal separation between upgradient and downgradient locations perpendicular to potentiometric contours

d_h = Change in hydraulic head between upgradient and downgradient locations

i = Hydraulic gradient (change in elevation over distance)

n_e = Site average porosity of 18.5%

K = Site average hydraulic conductivity of 3.44 E-02 ft/day from slug and pumping tests at site

v_s = Seepage Velocity (ft/day)

$$\text{Hydraulic Gradient Governing Equation}^1 - \quad i = - dh/dl$$

$$\text{Seepage Velocity Governing Equation}^2 - \quad v_s = -K * i / n_e$$

1. In textbook form, d_h is a negative number as hydraulic head is reported as the higher value subtracted from the lower value.

2. Negative operation performed as in textbook form, hydraulic gradient is negative.

Table 3

2020 Analytical Results Summary
LOS Landfill CCR Monitoring Well Network
Leland Olds Station - Stanton, North Dakota

			Appendix III Constituents						
Well ID	Event	Date	Boron mg/L	Calcium mg/L	Chloride mg/L	Fluoride mg/L	pH SU	Sulfate mg/L	Total mg/L

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Qualifiers

General Chemistry

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
□	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Case Narrative

Job ID: 280-137534-1

Laboratory: Eurofins TestAmerica, Denver

Narrative

CASE NARRATIVE

Client: AECOM Technical Services Inc.

Project: LOS Landfill

Report Number: 280-137534-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 6/11/2020 9:40 AM; the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 0.8° C.

Receipt Exceptions

The following sample was received with containers not completely filled with volume: MW-2016-2 (280-137534-5). It can be noted that sufficient volume is available for the requested analyses.

- 1 x 1L unpreserved plastic container filled with ~500mL of volume.
- 1 x 500mL Nitric Acid preserved plastic container filled with ~300mL of volume.
- 1 x 250mL unpreserved plastic container filled with ~150mL of volume.

TOTAL METALS (ICP)

Samples MW-2016-4 (280-137534-1), MW-2016-10 (280-137534-2), MW-2016-9 (280-137534-3), MW-2016-11 (280-137534-4) and MW-2016-2 (280-137534-5) were analyzed for Total Metals (ICP) in accordance with EPA SW-846 Method 6010C. The samples were prepared on 06/17/2020 and analyzed on 06/19/2020.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TOTAL DISSOLVED SOLIDS

Samples MW-2016-4 (280-137534-1), MW-2016-10 (280-137534-2), MW-2016-9 (280-137534-3), MW-2016-11 (280-137534-4) and MW-2016-2 (280-137534-5) were analyzed for total dissolved solids in accordance with SM20 2540C. The samples were analyzed on 06/12/2020.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

ANIONS (28 DAYS)

Samples MW-2016-4 (280-137534-1), MW-2016-10 (280-137534-2), MW-2016-9 (280-137534-3), MW-2016-11 (280-137534-4) and MW-2016-2 (280-137534-5) were analyzed for anions (28 days) in accordance with EPA SW-846 Method 9056A. The samples were analyzed on 06/22/2020 and 06/23/2020.

Samples MW-2016-4 (280-137534-1)[5X], MW-2016-10 (280-137534-2)[5X], MW-2016-9 (280-137534-3)[5X], MW-2016-11

Case Narrative

Client: AECOM Technical Services Inc.
Project/Site: LOS Landfill

Job ID: 280-137534-1

Job ID: 280-137534-1 (Continued)

Laboratory: Eurofins TestAmerica, Denver (Continued)

(280-137534-4)[5X] and MW-2016-2 (280-137534-5)[5X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Login Sample Receipt Checklist

Client: AECOM Technical Services Inc.

Job Number: 280-137534-1

Login Number: 137534

List Source: Eurofins TestAmerica, Denver

List Number: 1

Creator: Schade, Daniel B

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	False	Refer to Job Narrative for details.
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Job ID: 280-137634-1

Qualifiers

General Chemistry

Qualifier	Qualifier Description
E	Result exceeded calibration range.
H	Sample was prepped or analyzed beyond the specified holding time
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation These commonly used abbreviations may or may not be present in this report.

□	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Laboratory: Eurofins TestAmerica, Denver

Narrative

CASE NARRATIVE

Client: AECOM Technical Services Inc.

Project: LOS Landfill

Report Number: 280-137634-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 6/12/2020 2:12 PM; the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 3.2° C.

TOTAL METALS (ICP)

Samples MW-2016-8 (280-137634-1), DUP-2 (280-137634-2), MW-2016-5 (280-137634-3), MW-2016-3 (280-137634-4) and MW-2016-6 (280-137634-5) were analyzed for Total Metals (ICP) in accordance with EPA SW-846 Method 6010C. The samples were prepared on 06/17/2020 and analyzed on 06/20/2020.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TOTAL DISSOLVED SOLIDS

Samples MW-2016-8 (280-137634-1), DUP-2 (280-137634-2), MW-2016-5 (280-137634-3), MW-2016-3 (280-137634-4) and MW-2016-6 (280-137634-5) were analyzed for total dissolved solids in accordance with SM20 2540C. The samples were analyzed on 06/15/2020 and 06/17/2020.

The analysis volume selected for the following samples produced a base result greater than 200mg before calculation of the final result: DUP-2 (280-137634-2) and MW-2016-6 (280-137634-5). Reanalysis was done at a lower initial volume because the reference method specifies that no more than 200mg of weight be recovered for a chosen sample analysis volume in order to produce the best data precision. The reanalysis for sample DUP-2 (280-137634-2) was performed 1 day after the hold time expired. As instructed by the client, both results have been reported.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

ANIONS (28 DAYS)

Samples MW-2016-8 (280-137634-1), DUP-2 (280-137634-2), MW-2016-5 (280-137634-3), MW-2016-3 (280-137634-4) and MW-2016-6 (280-137634-5) were analyzed for anions (28 days) in accordance with EPA SW-846 Method 9056A. The samples were analyzed on 06/23/2020 and 06/24/2020.

Samples MW-2016-8 (280-137634-1)[10X], DUP-2 (280-137634-2)[10X], MW-2016-5 (280-137634-3)[10X] and MW-2016-6 (280-137634-5)[10X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Qualifiers

Metals

Qualifier	Qualifier Description
^	ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC is outside acceptance limits.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Case Narrative

Client: Basin Electric Power Cooperative
Project/Site: CCR Groundwater - North Dakota Sites

Job ID: 280-141144-1
SDG: LOS Landfill

Job ID: 280-141144-1

Laboratory: Eurofins TestAmerica, Denver

Narrative

CASE NARRATIVE

Client: Basin Electric Power Cooperative

Project: CCR Groundwater - North Dakota Sites - LOS Landfill

Report Number: 280-141144-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

REVISED REPORT - CREATED 1/19/21

This report includes revised data. Sulfate & Fluoride results were over-calibration and required adjustments in dilution; however, Chloride results were not over-calibration but were reported at 10X dilution. The 10X dilution for Chloride results was not needed. As such, Chloride results in this report were revised to report from batch 513327 where the samples were analyzed at 1X dilution.

RECEIPT

The samples were received on 10/3/2020 9:30 AM; the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 1.0° C and 4.6° C.

Receipt Exceptions

The container labels for the following samples did not match the information listed on the Chain-of-Custody (COC): MW-2016-3 (280-141144-2), MW-2016-4 (280-141144-3) and MW-2016-9 (280-141144-7). The samples were logged per the collection times listed on the COC unless instructed otherwise.

MW-2016-3: Collection time on COC 10:48, 10:49 on container.

MW-2016-4: Collection time not indicated on containers.

MW-2016-9: Collection time not indicated on containers.

The following sample was received with containers not completely filled with volume: MW-2016-2 (280-141144-1). It can be noted that sufficient volume is available for the requested analyses.

-MW-2016-2: Plastic 1L Unpreserved filled with ~200mL, Plastic 500mL Nitric Acid filled with ~ 400mL, Plastic 250mL Unpreserved filled with ~125mL.

TOTAL RECOVERABLE METALS

Samples MW-2016-2 (280-141144-1), MW-2016-3 (280-141144-2), MW-2016-4 (280-141144-3), MW-2016-5 (280-141144-4), MW-2016-6 (280-141144-5), MW-2016-8 (280-141144-6), MW-2016-9 (280-141144-7), MW-2016-10 (280-141144-8), MW-2016-11 (280-141144-9) and Dup-1 (280-141144-10) were analyzed for Total Recoverable Metals in accordance with EPA SW-846 Method 6010C. The samples were prepared on 10/14/2020 and analyzed on 10/16/2020.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Case Narrative

Client: Basin Electric Power Cooperative
Project/Site: CCR Groundwater - North Dakota Sites

Job ID: 280-141144-1
SDG: LOS Landfill

Job ID: 280-141144-1 (Continued)

Laboratory: Eurofins TestAmerica, Denver (Continued)

TOTAL METALS (ICPMS)

Samples MW-2016-2 (280-141144-1), MW-2016-3 (280-141144-2), MW-2016-4 (280-141144-3), MW-2016-5 (280-141144-4), MW-2016-6 (280-141144-5), MW-2016-8 (280-141144-6), MW-2016-9 (280-141144-7), MW-2016-10 (280-141144-8), MW-2016-11 (280-141144-9) and Dup-1 (280-141144-10) were analyzed for total metals (ICPMS) in accordance with EPA SW-846 6020A. The samples were prepared on 10/12/2020 and analyzed on 10/12/2020 and 10/13/2020.

The continuing calibration verification (CCV) associated with batch 280-512346 recovered (111%) above the upper control limit (110%) for Arsenic. The samples associated with this CCV were <RL for the affected analytes; therefore, the data have been reported. The associated samples are impacted: MW-2016-5 (280-141144-4), MW-2016-6 (280-141144-5), MW-2016-8 (280-141144-6), MW-2016-9 (280-141144-7), MW-2016-10 (280-141144-8), MW-2016-11 (280-141144-9) and Dup-1 (280-141144-10) and (CCV 280-512346/169).

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TOTAL MERCURY

Samples MW-2016-2 (280-141144-1), MW-2016-3 (280-141144-2), MW-2016-4 (280-141144-3), MW-2016-5 (280-141144-4), MW-2016-6 (280-141144-5), MW-2016-8 (280-141144-6), MW-2016-9 (280-141144-7), MW-2016-10 (280-141144-8), MW-2016-11 (280-141144-9) and Dup-1 (280-141144-10) were analyzed for total mercury in accordance with EPA SW-846 Methods 7470A. The samples were prepared and analyzed on 10/16/2020.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TOTAL DISSOLVED SOLIDS

Samples MW-2016-2 (280-141144-1), MW-2016-3 (280-141144-2), MW-2016-4 (280-141144-3), MW-2016-5 (280-141144-4), MW-2016-6 (280-141144-5), MW-2016-8 (280-141144-6), MW-2016-9 (280-141144-7), MW-2016-10 (280-141144-8), MW-2016-11 (280-141144-9) and Dup-1 (280-141144-10) were analyzed for total dissolved solids in accordance with SM20 2540C. The samples were analyzed on 10/06/2020.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

ANIONS (28 DAYS)

Samples MW-2016-2 (280-141144-1), MW-2016-3 (280-141144-2), MW-2016-4 (280-141144-3), MW-2016-5 (280-141144-4), MW-2016-6 (280-141144-5), MW-2016-8 (280-141144-6), MW-2016-9 (280-141144-7), MW-2016-10 (280-141144-8), MW-2016-11 (280-141144-9) and Dup-1 (280-141144-10) were analyzed for anions (28 days) in accordance with EPA SW-846 Method 9056A. The samples were analyzed on 10/20/2020, 10/21/2020 and 10/22/2020.

Samples MW-2016-2 (280-141144-1)[10X], MW-2016-3 (280-141144-2)[10X], MW-2016-3 (280-141144-2)[5X], MW-2016-4 (280-141144-3)[10X], MW-2016-5 (280-141144-4)[10X], MW-2016-6 (280-141144-5)[10X], MW-2016-8 (280-141144-6)[10X], MW-2016-9 (280-141144-7)[10X], MW-2016-10 (280-141144-8)[10X], MW-2016-11 (280-141144-9)[10X] and Dup-1 (280-141144-10)[10X] required dilution prior to analysis for Sulfate. The reporting limits have been adjusted accordingly.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.
