## List of Acronyms

ACM	Assessment of Corrective Measures
AECOM	AECOM Technical Services, Inc.
ASD	Alternative Source Demonstration
Basin	Basin Electric Power Cooperative
bgs	below ground surface
CCR	coal combustion residuals
CFR	Code of Federal Regulations
ft	feet
ft/day	feet per day
GWPS	groundwater protection standards
LRS	Laramie River Station
SSI	statistically significant increase
SSL	statistically significant levels
UPL	upper prediction limit
USGS	U.S. Geological Survey
95% LCL	95 percent lower confidence limit

## Executive Summary

This report summarizes groundwater monitoring and corrective action activities completed between January 1 and December 31, 2022 for the Coal Combustion Residuals (CCR) units at the Basin Electric Power Cooperative (Basin) Laramie River Station (LRS) as required by 40 Code of Federal Regulations (CFR) § 257.90(e) of the U.S. Environmental Protection Agency CCR rule. The CCR units subject to the rule include:

- Bottom Ash Pond 1,
- Bottom Ash Pond 2/Bottom Ash Pond 3/Ash Landfill Multi-unit, and
- Emergency Holding Ponds Multi-unit.

Site figures illustrating the location of the CCR units and program monitoring networks for the CCR units are presented as **Figures 1** and **2**, respectively. No program monitoring wells were modified or abandoned during the reporting period.

Basin implemented an Assessment monitoring program for Bottom Ash Pond 1 and the two CCR multi-units (Bottom Ash Pond 2/Bottom Ash Pond 3/Ash Landfill and Emergency Holding Ponds) in the spring of 2018 in response to the identification of statistically significant increases (SSIs) of Appendix III constituents in downgradient monitoring wells. Assessment monitoring was in place for all three units/multi-units at the start and end of the current annual reporting period (2022).

Assessment monitoring of the Bottom Ash Pond 2/Bottom Ash Pond 3/Ash Landfill Multi-unit in 2022 found that concentrations of some Appendix IV constituents (chromium, molybdenum, and selenium) exhibited SSIs above background values at selected monitoring wells but at concentrations below their respective groundwater protection standards (GWPSs).

Assessment monitoring of the Emergency Holding Ponds Multi-unit in 2022 found that concentrations of one Appendix IV constituent (barium) exhibited an SSI above the background value at monitoring well MW-47B, but at a concentration below the GWPS.

Assessment monitoring of the Bottom Ash Pond 1 Unit found that concentrations of lithium and molybdenum were more than their respective GWPSs. Downgradient well(s) with a constituent or constituents reported above GWPSs at a statistically significant level (SSL) are as follows:

Appendix IV Constituent	Unit/Multi-Unit	Downgradient Well(s) GWPS Exceedance
Lithium and molybdenum	Bottom Ash Pond 1	MW-38B

As required by the CCR rule, an assessment of corrective measures (ACM) was conducted and a public meeting open to interested and affected parties was held on January 30, 2020 to discuss the results of the ACM. After completion of the ACM, work was initiated on the Selection of Remedy for the impacted groundwater as required by 40 CFR § 257.97. A Groundwater Remedy Selection Report was prepared and issued in July 2020 (AECOM 2020), after which work was initiated on the design and implementation of the following selected remedy:

- Bottom Ash Pond 1 retrofit, hydraulic capture of impacted groundwater, and treatment of the captured groundwater in the new zero-discharge Pond 1.

Cleanout and retrofit of Bottom Ash Pond 1, which essentially eliminated the source of impact to groundwater, was completed in March 2021. Installation and hydraulic testing of extraction wells for the hydraulic capture system was completed in December 2021. The hydraulic capture pumping system was designed in 2022 and contracting for

installation of the system was initiated in 2022. Installation of the pumping system and initiation of pumping is expected in 2023.

Other activities and conditions for the 2022 annual reporting period include:

- Semiannual Assessment-mode groundwater monitoring events were conducted in June and September. Monitoring involved sampling of background monitoring wells and downgradient monitoring wells.
- No decommissioning of the existing program monitoring networks was conducted.
- No program transitions (Detection to Assessment or vice versa) were triggered.

Anticipated activities for the next annual reporting period include:

- Completion of two semi-annual Assessment-mode groundwater monitoring events.
- Statistical evaluation of groundwater data for Appendix III and Appendix IV constituents.
- Initiation of groundwater withdrawal for the Bottom Ash Pond 1 Unit treatment system.

## 1. Introduction

On behalf of Basin Electric Power Cooperative (Basin), AECOM Technical Services, Inc. (AECOM) has prepared this 2022 annual report documenting groundwater monitoring and corrective action for the Coal Combustion Residuals (CCR) units at Basin's Laramie River Station (LRS).

Section 1 provides background information on the LRS power generating facility, its CCR unit(s) and their physical setting, including geology, hydrology, and groundwater conditions. Section 2 summarizes CCR groundwater monitoring activities conducted prior to 2022. Section 3 summarizes the groundwater monitoring and corrective action activities completed in 2022, and references attachments to this report that contain detailed documentation of those activities. Section 4 provides some general information regarding the LRS CCR program and actions planned for 2023. Section 5 presents a summary and conclusions from CCR groundwater monitoring in 2022 and statistical analysis of the results. Section 6 lists references cited in this report.

## Regulatory Background

The CCR rule (Chapter 40 of the Code of Federal Regulations [CFR] Part 257 Subpart D) became effective on October 19, 2015 and established standards for the disposal of CCR in landfills and surface impoundments (CCR units). In particular, the rule set forth groundwater monitoring and corrective action requirements for CCR units. The rule includes the requirement for an "annual groundwater monitoring and corrective action report" (annual report), with the annual report for 2021 due by January 31, 2022. The annual report is intended to document the status of the groundwater monitoring and corrective action program for each CCR unit, summarize key actions completed in the previous year, and project key activities for the upcoming year. This report is the sixth annual report for LRS and reports on activities performed and data gathered in calendar year 2022.

## Facility Location and Operational History

LRS, located east of Wheatland, Wyoming (**Figure 1**), is one of the largest consumer-operated, regional, joint power supply ventures in the United States. The plant consists of three power-generating units with a total power output capacity of 1,710 megawatts:

- Unit 1, with a rating of 570 megawatts, which began operating in 1980;
- Unit 2, with a rating of 570 net megawatts, which began operating in 1981; and
- Unit 3, with a rating of 570 net megawatts, which began operating in 1982.

CCR produced at LRS includes fly ash, bottom ash, and flue gas desulfurization waste.

## CCR Unit Description

CCR is disposed at LRS in the following CCR units, monitored as individual units or multi-units:

- Bottom Ash Pond 1;
- Bottom Ash Pond 2, Bottom Ash Pond 3, Ash Landfill (multi-unit); and
- Emergency Holding Ponds (multi-unit).

The Ash Landfill and three bottom ash ponds are located near the western edge of the site, west of the LRS generating units and office complex (**Figure 1**). The two emergency holding ponds are located north of the generating units in the northeastern part of the site. The landfill and ash ponds were permitted in 1978 and began receiving coal ash in 1980. The emergency holding ponds were identified as CCR units due to periodic disposal of flue gas desulfurization waste in the ponds.

## Physical Setting

The geological and hydrogeological setting is important to understanding the groundwater environment in the vicinity of the LRS. The geologic history of Platte County, Wyoming is similar to most areas within the Front Range of the Rocky Mountains. Platte County is underlain by marine and continental deposits of limestone, conglomerate, sandstone, siltstone, shale, and unconsolidated sediments. Deposits range in thickness up to 10,000 feet (ft) in the east central and southeastern parts of the county. Precambrian rocks generally make up the mountainous areas, Paleozoic and Mesozoic rocks adjoin the older formations, and Tertiary and Quaternary period rocks underlie most of the county east of the Laramie Range (U.S. Geological Survey [USGS] 1960). The Laramide Orogeny was a period of mountain building active in the county approximately 70 million years ago marking the beginning of the Laramie Range and the Hartville Uplift, a structural divide separating the southern Powder River Basin from the northern Denver Basin. During the Cenozoic Era, streams eroded the eastern side of the range depositing silts, sands, and gravels of the Brule and Arikaree Formations that underlie the Wheatland area, including LRS.

Precipitation landing on the eastern flank of the Laramie Range supplies surface water to perennial and ephemeral streams that flow east towards the basin. Most surface water west of Wheatland eventually joins with the Laramie River, continuing east before discharging into the Platte River near Fort Laramie. Groundwater near Wheatland is recharged primarily through infiltration of rain and melt water on the eastern flank of the Laramie Range and through infiltration of irrigation water during the spring, summer, and fall months. Some groundwater in the saturated zones eventually returns to the land surface through seeps and springs, or is discharged by wells and evapotranspiration; however, the majority flows into surface streams. Alluvial drainages bounding the eastern (Wheatland Creek) and western portions (Chugwater Creek) of the facility generally transport surface water northward, discharging to the Laramie River (USGS 1960). Some groundwater within these regions percolates into the Arikaree Formation, which holds the uppermost aquifer beneath the LRS facility.

The LRS facility is underlain by a 5 to 30 ft thick section of Quaternary sediments that overlie the Arikaree Formation. The Arikaree Formation is comprised primarily of loosely to moderately cemented very fine to fine grained sandstone with interbedded silts and clays. A lower unit consists of lenses of loose to well-cemented red to gray coarse sandstone interbedded with lenses of well-cemented conglomerate. A basal conglomerate lies unconformably upon the underlying Brule Formation in many places throughout Platte County (USGS 1960). A review of the geologic logs generated during the drilling of the on-site water supply well (Forell-Baumgardner No. 2) suggests the Brule Formation is approximately 820 ft below ground surface (bgs) in the western portions of the facility. Based on this information, the local thickness of the Arikaree Formation on-site is approximately 790 ft thick.

The lithologic characteristics of the Arikaree Formation beneath the LRS are generally consistent, although there are slight differences in the degree of cementation and induration, and minor variations in grain size. Few fractures were noted in borehole soil cores obtained during monitoring well network installation. Interbeds with higher silt and clay content, coupled with greater cementation, generate thin discontinuous perched groundwater horizons that are interpreted to hold only seasonal groundwater. The perched groundwater would tend to percolate downward to what is interpreted as the uppermost aquifer based on data obtained during monitoring well installation and aquifer testing. The uppermost aquifer is present at a depth of approximately 95 ft bgs in the southwestern portion of the facility, and slopes generally north towards the Laramie River. The hydraulic gradient for the uppermost aquifer beneath the facility appears to be controlled dominantly through topographic features and enhanced infiltration zones in permeable shallow alluvium. A representative potentiometric surface map from the most recent assessment monitoring event conducted in October 2021 is presented in **Figure 1**. Data from aquifer pump testing conducted at the facility in 2016 were used to estimate hydraulic conductivities, which range from 0.65 feet per day (ft/day) to 3.12 ft/day, with an average of 1.40 ft/day. Aquifer slug tests were also performed on eight other wells, with resulting hydraulic conductivities ranging from 0.45 ft/day to 6.28 ft/day, with an average of 2.16 ft/day.

## 2. CCR Groundwater Monitoring Activities Prior to 2022

The regulatory process for CCR groundwater monitoring and corrective action is established by 40 CFR §§ 257.90 through 257.98. The process includes a phased approach to groundwater monitoring, leading (if applicable) to the establishment of groundwater protection standards (GWPSs) for each CCR unit. Exceedances of the GWPSs that are determined to be statistically significant can trigger requirements for additional groundwater characterization and corrective action assessment followed by corrective action implementation.

The following paragraphs provide a summary of CCR groundwater monitoring activities performed prior to 2022. CCR groundwater monitoring activities performed in 2022 are discussed in Section 3.

Groundwater monitoring at LRS is performed using a network of monitoring wells that includes wells to monitor background water quality that is not potentially influenced by the presence of the CCR unit, and wells placed at the downgradient boundary of the CCR units (**Figure 2**). The hydro stratigraphic positions of the CCR monitoring wells selected for sampling background and downgradient groundwater quality for each LRS CCR unit or multi-unit prior to 2022 are summarized below:

CCR Unit/multi-Unit	Background Wells	Downgradient Wells
Bottom Ash Pond 1	MW-52B, MW-53B	MW-49B, MW-21B, MW-38B, MW-38C
Bottom Ash Pond 2, Bottom Ash Pond 3, Ash Landfill	MW-39B, MW-32B	MW-36B, MW-37B, MW-20B, MW-14BR, MW-40B, MW-52B, MW-53B
Emergency Holding Ponds	MW-41B, MW-42B, MW-43B	MW-44B, MW-45B, MW-46B, MW-47B

The following monitoring wells were also included in the CCR monitoring network for the purpose of measuring groundwater elevations and evaluating groundwater flow direction and velocity in the vicinity of the bottom ash ponds and landfill: MW-33B, MW-34B, MW-35B, MW-48B, MW-50B, MW-51B, 54B, 55B, and 56B.

### Baseline Detection Monitoring (2016-17)

Detection monitoring was initiated in August 2016, which involved sampling groundwater for Part 257 Appendix III and Appendix IV constituents over eight baseline Detection monitoring events.

Baseline Detection monitoring events were performed in general accordance with procedures established in the site-specific Sampling and Analysis Plan (AECOM 2018a), which is included in the facility's Operating Record. The Sampling and Analysis Plan describes the procedures for equipment calibration, monitoring well water level measurement, monitoring well purging and sampling, sample custody, sample shipping, laboratory analysis, and documentation requirements for each groundwater sample submitted. The results of detection monitoring at LRS were presented and discussed in the First Annual Groundwater Monitoring and Corrective Action Report, 2016-2017 (AECOM 2018b).

### Initial Assessment Monitoring (2018)

If a statistically significant increase (SSI) of any Appendix III constituent relative to background conditions was detected in the downgradient monitoring wells and could not be demonstrated to be associated with a source other than the CCR unit, then the CCR rule required that groundwater monitoring transition from the Detection monitoring phase to the Assessment monitoring phase. The results of Detection monitoring identified the following Appendix III SSIs:

- Bottom Ash Pond 1 SSIs – boron, calcium, chloride, sulfate, and total dissolved solids;

- Bottom Ash Pond 2, Bottom Ash Pond 3, Ash Landfill SSIs – fluoride and chloride; and
- Emergency Holding Ponds SSI – fluoride.

In response to SSIs identified during Detection monitoring, Basin implemented an Assessment monitoring program for the two CCR multi-units (Bottom Ash Pond 2, Bottom Ash Pond 3, Ash Landfill and Emergency Holding Ponds) in the spring of 2018. The initial Assessment monitoring event for the two multi-units was conducted in April 2018 and included analysis of groundwater samples for constituents listed in Part 257 Appendix IV. Also in the spring of 2018, Basin elected to conduct an alternative source demonstration (ASD) investigation to evaluate whether an alternative source could explain the SSIs identified for Bottom Ash Pond 1 during Detection monitoring. This ASD investigation involved the following activities:

- Analyzing soil samples collected from shallow soil borings at 10 locations near Bottom Ash Pond 1, and
- Performing groundwater modeling to evaluate potential constituent migration pathways and transport times from potential source areas to one of the downgradient wells for Bottom Ash Pond 1.

The ASD investigation could not confirm an alternative source; therefore, Basin initiated an Assessment monitoring program for Bottom Ash Pond 1 and completed the initial Assessment monitoring event in June 2018 which included analysis of groundwater samples for constituents listed in Part 257 Appendix IV.

The following Appendix IV constituents were detected during the initial Assessment monitoring of the CCR multi-units: barium, chromium, fluoride, lithium, molybdenum, radium-226 and -228 (combined), and selenium (April 2018). The Appendix IV constituents detected during initial Assessment monitoring of Bottom Ash Pond 1 included barium, chromium, cobalt, fluoride, lithium, molybdenum, and selenium (June 2018).

Because one or more Appendix IV constituents were detected during the initial Assessment monitoring events for all three CCR units/multi-units at LRS, the CCR rule required that a second verification assessment monitoring event be performed for each unit/multi-unit. Verification assessment monitoring was performed in June 2018 for the two multi-units and in October 2018 for Bottom Ash Pond 1. Verification monitoring for each unit/multi-unit involved analysis for Appendix III constituents plus the Appendix IV constituents detected during initial Assessment monitoring.

The results of Assessment monitoring conducted in 2018 were presented in the 2018 Annual Groundwater Monitoring and Corrective Action Report (AECOM 2019a).

## Additional Groundwater Characterization (2019)

The CCR rule requires that concentrations of Appendix III and Appendix IV constituents detected in downgradient wells during Assessment monitoring be compared to background concentrations using the statistical procedures in § 257.93(g). The rule also requires the establishment of GWPSs in accordance with § 257.95(h) for each Appendix IV constituent detected in downgradient wells during Assessment monitoring. If a GWPS is exceeded in one or more downgradient wells at statistically significant levels (SSLs), the rule requires additional groundwater characterization and an assessment of corrective measures (ACM) unless the SSLs can be attributed to a source other than the CCR unit or to an error in sampling, statistical evaluation, or natural variation in groundwater quality.

Assessment monitoring of Bottom Ash Pond 1 found that lithium and molybdenum concentrations in monitoring well MW-38B exceeded GWPSs at SSLs. Although selenium concentrations in monitoring wells MW-21B and MW-38B exceeded the GWPS by direct comparison, their 95 percent lower confidence limit (95% LCL) did not exceed the GWPS. Basin concluded the available data indicated that the SSLs associated with Bottom Ash Pond 1 could not be attributed to a source other than the CCR unit or to errors in sampling, statistical evaluation, or natural variation in groundwater quality. Therefore, Basin performed additional groundwater characterization and an ACM for Bottom Ash Pond 1. Additional groundwater characterization activities were performed in the spring of 2019 to evaluate the nature and extent of groundwater impacted by a release of CCR from Bottom Ash Pond 1 that has resulted in the exceedance of GWPSs for lithium and molybdenum. The characterization activities were designed to also support selection and implementation of a remedy to attain GWPSs. The activities involved installation and sampling of four monitoring wells (MW-38C, MW-54B, MW-55B, MW-56B) downgradient of Bottom Ash Pond 1 at the locations illustrated in **Figure 2**:

- MW-38C was installed near MW-38B to evaluate the vertical extent of groundwater impacts near MW-38B. The total depth of MW-38C was 130 ft bgs.
- MW-54B was installed to evaluate groundwater quality of the uppermost aquifer at the facility boundary. The total depth of MW-54B was 25 ft bgs.
- MW-55B was installed northeast of MW-21B to evaluate the downgradient extent of groundwater impacts north of MW-38B. The total depth of MW-55B was 70 ft bgs.
- MW-56B was installed east of MW-21B to evaluate the lateral extent of groundwater impacts northeast of MW-38B. The total depth of MW-56B was 79 ft bgs.

Groundwater samples from the four wells were analyzed for Appendix III parameters and the following Appendix IV parameters: barium, chromium, cobalt, fluoride, lithium, molybdenum, and selenium; and the geochemical parameters alkalinity, magnesium, and sodium. None of the 2019 results exceeded the GWPSSs for lithium, molybdenum, or the other Appendix IV constituents detected during Assessment monitoring in 2018. These results, combined with results from past Assessment monitoring, reasonably defined the extent of groundwater impacted by lithium and molybdenum attributed to Bottom Ash Pond 1. The data suggest that the horizontal extent of groundwater with lithium and molybdenum concentrations exceeding GWPSSs extends from Bottom Ash Pond 1 downgradient to MW-38B but not as far as MW-55B or MW-56B. Similarly, the vertical extent of groundwater exceeding GWPSSs extends from the surface of the uppermost aquifer at MW-38B to possibly below the bottom of the screened interval of MW-38B (75 ft bgs), but not as deep as the screened interval of MW-38C (114 ft bgs to 125 ft bgs). Overall, the data enhanced understanding of relevant site conditions, assisted in selecting a remedy, and will be useful for remedy design and implementation.

## Assessment of Corrective Measures (ACM) (2019-2020)

Groundwater assessment monitoring of Bottom Ash Pond 1 identified lithium and molybdenum at SSLs above GWPSSs. The exceedance of GWPSSs triggered requirements for the assessment, selection, and implementation of corrective measures to prevent further releases of hazardous constituents, remediate any releases, and restore the affected area. Basin completed an ACM in 2019 (AECOM 2019b). The ACM focused on identifying and evaluating groundwater corrective measures to address the dissolved lithium and molybdenum in groundwater downgradient of Bottom Ash Pond 1.

Potentially applicable corrective measures were identified based on the nature and extent of groundwater impacts and site-specific geological and hydrogeological characteristics. Screening was performed by evaluating each corrective measure against the criteria of effectiveness, technical implementability, and relative cost. Those that were deemed ineffective and/or had significant implementation concerns were rejected from further consideration. Natural attenuation, groundwater extraction, and long-term monitoring passed the screening step and were assembled into the following two corrective measures alternatives for further detailed evaluation:

- Alternative A: Natural Attenuation and Long-Term Monitoring; and
- Alternative B: Groundwater Extraction, On-site Reuse or Disposal, and Long-Term Monitoring.

The two alternatives were evaluated against the requirements specified in 40 §§ CFR 257.96 and 257.97, broadly categorized under the criterion of effectiveness, implementability, and cost. The results of the ACMs, including an evaluation of the two alternatives, are presented in the ACMs (AECOM 2019b). The two alternatives were presented at a public meeting held on January 30, 2020 in Wheatland, Wyoming. A 30-day public comment period started on January 30, 2020 and ended on February 29, 2020. No comments were received during the 30-day period following the public meeting.

## Selection of Remedy and Remedy Implementation (2020-2021)

Following the ACM public meeting, Basin elected to implement Alternative B: Retrofit of Bottom Ash Pond 1, Groundwater Extraction, On-site Reuse or Disposal, and Long-Term Monitoring to meet the remedy requirements of the CCR rule. The Groundwater Remedy Selection Report was certified and issued in July 2020 (AECOM 2020).

Basin subsequently initiated remedial design activities within 90 days of remedy selection in accordance with § 257.97.

- The first step in the selected alternative involves the removal of all CCR from Bottom Ash Pond 1 and the placement of a liner system before returning it to service as a CCR unit. The retrofit was initiated in August 2020 and completed in March 2021.
- The second step involves the use of proven, reliable groundwater pumping technology to intercept impacted groundwater and route it back to the retrofitted Bottom Ash Pond 1. Design of this step was initiated in November 2020 and was completed in spring 2022. The following steps were completed in 2021:
  - Installation of two 6-inch recovery wells to a total depth of approximately 80 ft bgs occurred in November 2021.
  - Recovery well development and aquifer testing of the recovery wells occurred in December 2021.

## Semi-annual Assessment Monitoring (2019-2021)

Assessment monitoring in 2018 of the Bottom Ash Pond 2, Bottom Ash Pond 3, and the Ash Landfill multi-unit found that concentrations of Appendix IV constituents chromium, fluoride, and selenium exhibited SSIs above background values, but all concentrations were below GWPSSs. Therefore, Assessment monitoring of this multi-unit is required on a semi-annual basis per the requirements of § 257.95. Assessment monitoring of the Emergency Holding Ponds multi-unit found that Appendix IV constituents chromium, fluoride, and selenium exhibited SSIs above background values but below GWPSSs. Therefore, semi-annual Assessment monitoring of this multi-unit is also required. The results of semi-annual assessment monitoring subsequently completed in 2022 are discussed in section 3.

The first of two semi-annual Assessment monitoring events for 2019 occurred on June 4-6, 2019. The field activities and resulting data were summarized in the Sampling and Analysis Report, Assessment Monitoring, June 2019 (AECOM 2019c). The second semi-annual Assessment monitoring event for 2019 occurred on October 21-23, 2019. The field activities and data were summarized in the Sampling and Analysis Report, Assessment Monitoring, October 2019 (AECOM 2019d).

Semi-annual Assessment monitoring events for 2020 and 2021 occurred in June and October of each year. The field activities and resulting data were summarized in the 2020 Annual Groundwater Monitoring and Corrective Action Report and the 2021 Annual Groundwater Monitoring Corrective Action Report (AECOM 2021, 2022).

### 3. CCR Groundwater Monitoring and Corrective Action Activities in 2022

This section summarizes the activities conducted at LRS in 2022 to comply with the groundwater requirements of the CCR rule:

- Groundwater assessment monitoring activities for all CCR units:
  - monitoring system evaluation;
  - groundwater sampling;
  - laboratory analysis; and
  - statistical analysis of the monitoring results.
- Groundwater Corrective Action
  - A Groundwater Extraction System was designed for Bottom Ash Pond 1 and operation is anticipated to be initiated in 2023

Further details concerning each of these activities, including brief discussion of work completed during the reporting period are provided below.

#### Assessment Monitoring Activities

##### Monitoring System Evaluation

As described in the CCR Groundwater Monitoring System Report (AECOM 2017), monitoring wells were installed around the CCR unit/multi-units at LRS to: (1) facilitate collection of representative groundwater samples from the uppermost aquifer; and (2) accurately measure water table elevations to support evaluation of groundwater gradient and flow direction. All monitoring wells comprising the LRS CCR monitoring system were found to be in good condition during the assessment monitoring events conducted in 2022.

Following additional groundwater characterization of Bottom Ash Pond 1 in the spring of 2019, Basin elected to incorporate the four newly installed monitoring wells into the assessment monitoring program which continued into 2022. Water level measurements and groundwater quality samples were collected from MW-38C during the June 2022 assessment monitoring event. Water level measurements were taken at MW-54B, MW-55B and MW-56B.

Potentiometric surface maps constructed using the depth-to-groundwater measurements obtained at the beginning of each event are presented in **Attachment A**. The direction of groundwater flow in both 2022 events is generally to the northeast, consistent with previous data collected during detection and assessment monitoring from 2016 through 2021 and supports the design of the well network (**Figure 2**) to monitor background groundwater quality and the quality of groundwater downgradient of the CCR units.

##### Groundwater Sampling and Analysis

Groundwater assessment monitoring was performed at LRS in June and September 2022 for the three CCR unit/multi-units. Monitoring activities included collecting groundwater samples from the wells listed below:

CCR Unit/multi-unit	Background Wells	Downgradient Wells
Bottom Ash Pond 1	MW-52B, MW-53B	MW-21B, MW-38B, MW-38C*, MW-49B
Bottom Ash Pond 2, Bottom Ash Pond 3, Ash Landfill (multi-unit)	MW-39B, MW-32B	MW-36B, MW-37B, MW-20B, MW-14BR, MW-40B, MW-52B, MW-53B
Emergency Holding Ponds (multi-unit)	MW-41B, MW-42B, MW-43B	MW-44B, MW-45B, MW-46B, MW-47B

\* MW-38C, installed in April 2019, was added to the assessment monitoring program as a downgradient compliance well for Bottom Ash Pond 1. This well was sampled during the June 2022 monitoring event, but not the September 2022 monitoring event.

Water levels were also measured in the following monitoring wells for the purpose of evaluating groundwater flow direction and velocity:

- MW-33B, MW-34B, MW-35B, MW-48B, MW-50B, MW-51B, MW-54B, MW-55B, and MW-56B<sup>1</sup>. Monitoring well MW-22B and MW-23B were not measured for water levels in 2022 due to damage to the lock and to the well, respectively. No well repair is planned for MW-23B this well has been removed from the water level monitoring network.

Assessment monitoring sampling and analysis was performed in general accordance with procedures established in the Sampling and Analysis Plan (AECOM 2018a). The results are presented in **Attachment A**, which also includes a representative potentiometric surface map for the uppermost aquifer, inferred groundwater flow direction and estimated velocities, and a tabulated summary of field measurements and laboratory analytical data.

## Statistical Procedures and Analysis

The CCR rule requires that concentrations of Appendix III and Appendix IV constituents detected in downgradient wells during assessment monitoring be compared to background concentrations using the statistical procedures in § 257.93(g). The rule also requires the establishment of GWPSSs for each Appendix IV constituent detected in downgradient wells during assessment monitoring. The detected concentrations are then compared to the GWPSSs for each constituent, which are either:

- The federal Safe Drinking Water Act maximum contaminant level,
- Concentrations for cobalt, lead, lithium, and molybdenum specified in § 257.95(h)(2), or
- The background concentration (upper prediction limit [UPL]) if it is higher than the maximum contaminant level or concentration specified in § 257.95(h)(2).

The statistical analysis procedures and results from 2022 assessment monitoring for each LRS CCR unit/multi-unit are discussed below. Input data files for calculating the UPLs and lower prediction limits for the LRS multi-units are provided in **Attachment B**.

### Bottom Ash Pond 1

Appendix III and Appendix IV groundwater quality data from Bottom Ash Pond 1 Assessment Monitoring were evaluated using an interwell approach that statistically compared constituent concentrations at downgradient monitoring wells to those present at background monitoring wells. The statistical analyses were performed in accordance with the Statistical Method Certification and Statistical Methodology presented in the CCR Groundwater Monitoring System Report (AECOM 2017).

Prediction limits (i.e., parametric or nonparametric) were developed for each constituent based on the frequency of non-detect values and whether the background data for that constituent exhibited a normal, lognormal, or nonparametric distribution. For the statistical analysis, non-detect values were represented as one-half the detection

<sup>1</sup> MW-54B, MW-55B, and MW-56B were only gauged during the first monitoring event in June and are not included in the second half potentiometric map in September.

limit. No outliers were identified in the background data. Analytical data from the background monitoring wells were used to develop an UPL for the Appendix III and Appendix IV background data at 95% confidence or better. Data from each downgradient compliance monitoring well were compared to the UPL to identify SSIs over background. Mann-Kendall trend analysis was used to identify trends for constituents with SSIs. Constituents exhibiting an SSI over the background UPL were further evaluated to determine whether they are present at SSLs relative to GWPS established under § 257.95(d)(2). SSLs were identified by calculating the 95% LCL for the constituents exhibiting SSIs over background at the downgradient compliance wells at each CCR unit and comparing the 95% LCL to the established GWPS. A constituent is present at an SSL above the GWPS if the 95% LCL is greater than the GWPS.

**Table 1** summarizes the statistically determined background UPLs of each Appendix III and Appendix IV constituent for Bottom Ash Pond 1. **Table 1** also identifies applicable Appendix IV GWPSs, whether each Appendix IV constituent concentration measured in the downgradient wells exceeds the GWPS by direct comparison, and if constituent concentrations are present at an SSL above the GWPS. Assessment monitoring of Bottom Ash Pond 1 in 2022 found that lithium and molybdenum at monitoring well MW-38B exceeded their respective GWPSs at an SSL. Appendix IV SSIs were also observed in MW-21B for chromium, molybdenum, and selenium, in monitoring well MW-38B for chromium, and in monitoring well MW-49B for lead. These SSIs did not exceed the GWPS at an SSL because the 95% LCL did not exceed the GWPS. In addition, lithium concentrations in MW-49B exceeded the GWPS but do not exceed the UPL at an SSI. Assessment monitoring of this CCR unit will continue on a semi-annual basis per the requirements of § 257.95.

### Bottom Ash Pond 2, Bottom Ash Pond 3, Ash Landfill Multi-unit

Statistical analyses of Appendix III and Appendix IV groundwater quality data for the Bottom Ash Pond 2, Bottom Ash Pond 3, Ash Landfill multi-unit were performed in a manner similar to that described above for Bottom Ash Pond 1.

**Table 2** summarizes the statistically determined background UPLs of each Appendix III and Appendix IV constituent for the Bottom Ash Pond 2, Bottom Ash Pond 3, Ash Landfill multi-unit. **Table 2** also identifies applicable Appendix IV GWPSs, whether each Appendix IV constituent concentration measured in the downgradient wells exceeds a GWPS by direct comparison, and if the constituent concentrations are present at an SSL above the GWPS. Assessment monitoring of this multi-unit in 2022 found that concentrations of some Appendix IV constituents (chromium, cobalt, molybdenum, and selenium) exhibited SSIs above background values at selected monitoring wells, but the concentrations were below GWPSs. The GWPS for lithium is controlled by the UPL of the background data set (0.0848 mg/L) as directed by § 257.95(h)(3). No downgradient monitoring well concentrations exceeded the lithium GWPS. Assessment monitoring of this multi-unit will continue on a semi-annual basis per the requirements of § 257.95.

### Emergency Holding Ponds

Statistical analyses of Appendix III and Appendix IV groundwater quality data for the Emergency Holding Ponds multi-unit were also performed consistent with the methodology described above for Bottom Ash Pond 1. **Table 3** summarizes the statistically determined background UPLs of each Appendix III and IV constituent for the Emergency Holding Ponds multi-unit. **Table 3** also identifies applicable Appendix IV GWPSs, whether each Appendix IV constituent concentration measured in the downgradient wells exceeds a GWPS by direct comparison, and if the constituent concentrations are present at an SSL above the GWPS. Assessment monitoring of the Emergency Holding Ponds multi-unit in 2022 found that concentrations of one Appendix IV constituent (barium) exhibited an SSI above the background value at monitoring well MW-47B, but the concentration was below the GWPS. Assessment monitoring of this multi-unit will continue on at least a semi-annual basis per the requirements of § 257.95.

## Corrective Action Activities

### Selection of Remedy for Bottom Ash Pond 1

After completion of the Bottom Ash Pond 1 excavation and retrofit and the installation of the groundwater interceptor system extraction wells in 2021, the design of the groundwater recovery pumping system was conducted. The design includes elements of pumping, piping, electrical service, and process controls. These activities were complete in 2022 and the contracting for installation of these elements was initiated in 2022. Supply chain issues have affected the

schedule of implementation but contracting and installation of the final elements are expected to be complete in 2023 so that pumping and treatment can be initiated in 2023.

## 4. General Information

The following subsections summarize any problems encountered in the LRS CCR program through 2022, resolutions to those problems (if needed), and upcoming actions planned for 2023.

### Problems Encountered

Except for supply chain issues associated with implementation of the Bottom Ash Pond 1 groundwater remedy implementation described above, no problems were encountered during the 2022 monitoring period.

### Actions Planned for 2023

Basin plans on continuing the Assessment monitoring program for the three CCR unit/multi-units at LRS in 2023. The Assessment monitoring program will include semi-annual groundwater sampling events and the required statistical evaluations. Basin also plans to complete the implementation of the remedy selected for Bottom Ash Pond 1. Basin will prepare a semiannual report describing the progress in implementing the remedy as needed.

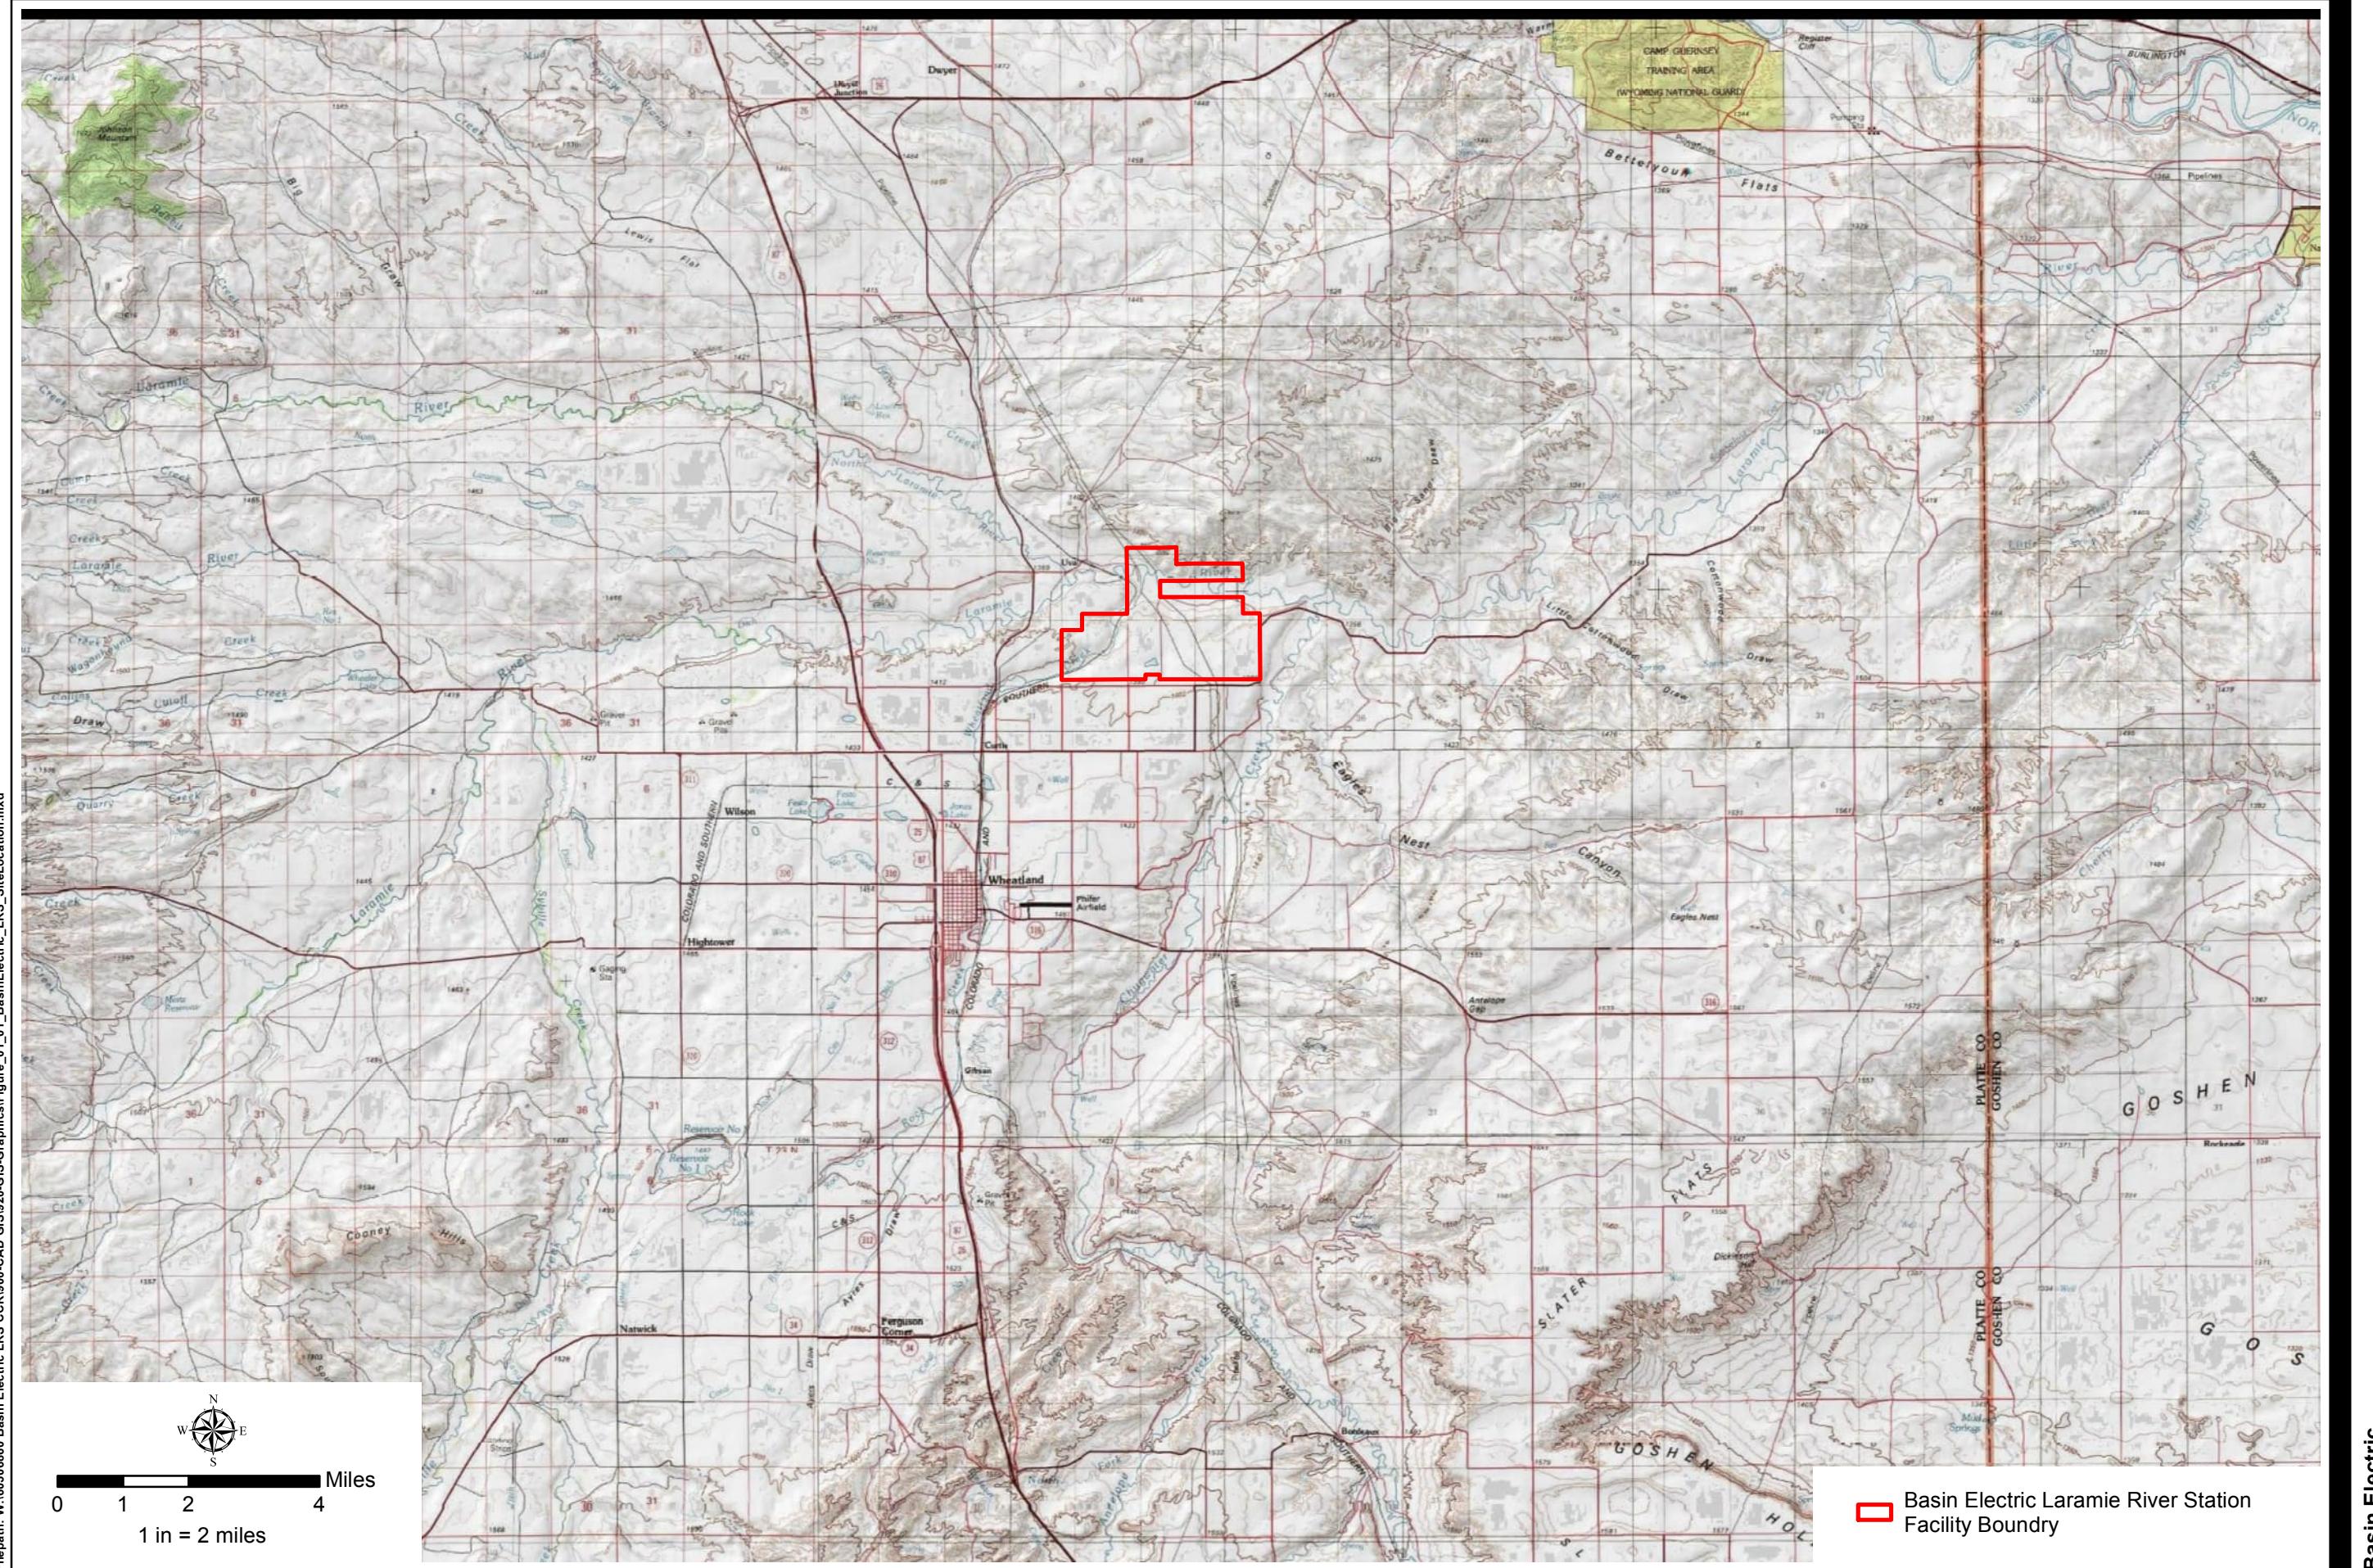

## 5. Summary and Conclusions

Two rounds of groundwater Assessment monitoring were performed at LRS in 2022. Statistical analysis of the results identified an SSI for at least one Appendix III constituent for each LRS CCR unit/multi-units. Therefore, Assessment monitoring will be performed on a semi-annual basis in 2022 for all LRS CCR unit/multi-units. Basin will also implement the selected remedy to address Appendix IV SSLs for lithium and molybdenum associated with Bottom Ash Pond 1 and continue to comply with CCR rule notification, reporting, and certification requirements.

## 1. Introduction

On behalf of Basin Electric Power Cooperative (Basin), AECOM Technical Services, Inc. (AECOM) prepared this Coal Combustion Residuals (CCR) Groundwater Sampling and Analysis Report for the Basin Laramie River Station (LRS).

This Sampling and Analysis Report was prepared to present the results of sampling and analysis of groundwater conducted per the monitoring requirements of the United States Environmental Protection Agency (USEPA) CCR rule (Chapter 40 of the Code of Federal Regulations [CFR], §§ 257.90 to 257.98).

The following three CCR unit/multi-units are present at LRS:

- Bottom Ash Pond 1;
- Bottom Ash Pond 2, Bottom Ash Pond 3, Ash Landfill (multi-unit); and
- Emergency Holding Ponds (multi-unit).

Semi-annual groundwater Assessment monitoring was performed at LRS in June and September 2022 for the three CCR unit/multi-units. Assessment monitoring involves groundwater level measurements, collection of groundwater samples from CCR monitoring wells, and analysis for Part 257 Appendix III and selected Appendix IV parameters.

## 2. Groundwater Flow

As required by 40 CFR § 257.93(c), groundwater elevations were measured in each well prior to purging each time groundwater was sampled. The groundwater measurements for the 2022 Assessment monitoring events, presented in **Table 1**, were used to create potentiometric surface maps for the uppermost aquifer for the baseline monitoring events. The resulting potentiometric surface maps (contained in the operating record) were used to evaluate the direction of groundwater flow and hydraulic gradient for each subject CCR unit/multi-unit. **Figure 1** and **Figure 2** represent a potentiometric surface map, including inferred groundwater flow direction for each CCR unit/multi-unit, constructed using measurements taken on June 27, 2022 and September 28, 2022, respectively. The potentiometric surface and inferred groundwater flow direction for the events completed in 2022 were generally consistent with previous events that have been conducted at LRS since monitoring began in 2016.

Groundwater flow velocities were calculated for each unit/multi-unit using measurements from the semi-annual assessment monitoring events in June and September 2022, as presented in **Appendix I** and summarized below:

Calculated Seepage Velocities (ft/day)			
CCR Unit/multi-unit	Minimum	Maximum	Average
Bottom Ash Pond 1	0.033	0.50	0.13
Bottom Ash Pond 2, Bottom Ash Pond 3, Ash Landfill	0.012	2.7	0.18
Emergency Holding Ponds	0.05	2.9	0.36

Based on the groundwater flow conditions documented in this section, the relative function of the monitoring wells employed in the LRS CCR groundwater monitoring system is as follows:

CCR Unit/multi-unit	Background Wells	Downgradient Wells
Bottom Ash Pond 1	MW-52B, MW-53B	MW-49B, MW-21B, MW-38B, MW-38C*
Bottom Ash Pond 2, Bottom Ash Pond 3, Ash Landfill	MW-39B, MW-32B	MW-36B, MW-37B, MW-20B, MW-14BR, MW-40B, MW-52B, MW-53B
Emergency Holding Ponds	MW-41B, MW-42B, MW-43B	MW-44B, MW-45B, MW-46B, MW-47B

\* MW-38C was added to the Bottom Ash Pond 1 monitoring program following its installation during groundwater characterization activities in the spring of 2019.

The following monitoring wells are also included in the LRS CCR monitoring system for the purpose of measuring groundwater elevations and evaluating groundwater flow direction and velocity in the vicinity of the bottom ash ponds and landfill: MW-33B, MW-34B, MW-35B, MW-48B, MW-50B, MW-51B, MW-54B, MW-55B, and MW-56B. These wells were added to the list following their installation during groundwater characterization activities conducted in the spring of 2019. Well MW-23B was removed from the monitoring well network after the well was found to be damaged in 2019 and it was determined the well was not needed to determine groundwater flow in the area. MW-22B could not be opened due to a damaged lock and therefore was not gauged during the 2022 reporting period. Monitoring wells MW-54B, MW-55B, and MW-56B were only gauged during the June 2022 monitoring event and thus are not included in the potentiometric surface map for September 2022.

### 3. Groundwater Quality

The semiannual Assessment monitoring events in June and September 2022 included samples from each well in the CCR unit/multiunit program except for MW-38C that was omitted from the October 2022 sampling event due to field sampling error. The samples collected for each event were submitted under chain-of-custody to the Eurofins Denver Laboratory located in Arvada, Colorado for analysis of the analytes included CCR Rule Appendix III and Appendix IV. The laboratory reports issued by Eurofins for these events were reviewed against the chain-of-custody forms and for compliance with maximum holding times and conformance with project-required methods with copies included in the LRS operating record. The reported analytical results from Eurofins were reviewed and verified by an AECOM data validator/chemist using USEPA guidelines (USEPA 2020<sup>1</sup>). Data validation concluded that field and laboratory precision, field and laboratory accuracy, method compliance, and data set completeness were acceptable based on the data reported. No data were missing or rejected, and all reported data are suitable for their intended use as reported with the clarifications and qualifications noted. Data validation reports were prepared for each monitoring event and are included in the operating record. The validated results for the June and September 2022 sampling events were compiled into summary form as presented in **Tables 2, 3, and 4** with the results of quality assurance/quality control field blank samples presented in **Table 5**. Copies of the Eurofins analytical laboratory and data validation reports for the June and September 2022 events are included as **Appendix II**.

## Appendix I

### Groundwater Flow Calculations

Project: Laramie River Station  
Calculations by: Erin Doty  
Date: 1/19/2022

CCR Unit: Bottom Ash Pond 1  
Checked by: Jeremy Hurshman  
Date: 1/23/2022

Background Wells: MW-52B, MW-53B  
Downgradient Wells: MW-49B, MW-21B, MW-38B

#### Hydraulic Gradient (i, ft/ft)

$$i = -\frac{dh}{dl}$$

where,  $i$ = hydraulic gradient  
 $dh$ = change in hydraulic head between upgradient and downgradient locations  
 $dl$ = horizontal distance between upgradient and downgradient locations, parallel to flow (perpendicular to potentiometric contours)

Date	Upgradient WL elevation (ft MSL)	Downgradient WL Elevation (ft MSL)	dh (ft)	dl (ft)	i (ft/ft)
June 27, 2022 (49B)	4495	4488.56	6.44	675	0.00954
September 28, 2022 (49B)	4495	4487.51	7.49	790	0.00948
				Minimum	<b>0.00948</b>
				Maximum	<b>0.00954</b>
				Average	<b>0.00951</b>

#### Hydraulic Conductivity (K, ft/d)

K, from slug and pumping tests		
Minimum	1.04	ft/day
Maximum	1.04	ft/day
Average (geomean)	1.04	ft/day

#### Specific Yield, Effective Porosity

Specific Yield, Effective Porosity	
Minimum	0.02
Maximum	0.3
Average	0.15

Note: Effective porosity/specific yield is based on literature values from Arikaree Formation literature and textbook values for sandstone

#### Seepage Velocity

$$v_s = -K * i / n_e$$

where,  $v_s$ = seepage velocity, feet per day (ft/d)  
 $K$ = hydraulic conductivity, feet per day (ft/d)  
 $i$ = hydraulic gradient, feet per foot (ft/ft)  
 $n_e$ = effective porosity/specific yield, unitless

Calculated Seepage Velocities (ft/day)				
	K (ft/day)	i (ft/ft)	n <sub>e</sub>	v <sub>s</sub> (ft/day)
Minimum	1.04	0.0095	0.30	<b>0.033</b>
Maximum	1.04	0.0095	0.02	<b>0.50</b>
Geometric Mean				<b>0.13</b>

Project: Laramie River Station  
Calculations by: Erin Doty  
Date: 1/19/2022

CCR Unit: Bottom Ash Ponds 2&3 and Ash Landfill  
Checked by: Jeremy Hurshman  
Date: 1/23/2022

Background Wells: MW-39B, MW-32B  
Downgradient Wells: MW-36B, MW-37B, MW-20B, MW-14BR, MW-40B, MW-52B, MW-53B

#### Hydraulic Gradient (i, ft/ft)

$$i = -\frac{dh}{dl}$$

where,  $i$ = hydraulic gradient

$dh$ = change in hydraulic head between upgradient and downgradient locations

$dl$ = horizontal distance between upgradient and downgradient locations, parallel to flow (perpendicular to potentiometric contours)

Summary Table - Hydraulic Gradient

Date	Vector	Upgradient WL elevation (ft MSL)	Downgradient WL Elevation (ft MSL)	dh (ft)	dl (ft)	i (ft/ft)	Average i (ft/ft)
June 27, 2022	Vector 1 (36B)	4510.00	4474.63	35.37	4275	0.0083	0.0088

#### Hydraulic Conductivity (K, ft/d)

<b>K from slug and pumping tests conducted at site</b>		
Minimum	0.75	ft/day
Maximum	3.12	ft/day
Average (geomean)	1.31	ft/day

#### Specific Yield, Effective Porosity

<b>Specific Yield, Effective Porosity</b>	
Minimum	0.02
Maximum	0.3
Average	0.15

Note: Effective porosity/specific yield is based on literature values from Arikaree Formation literature and textbook values for sandstone

#### Seepage Velocity

$$v_s = -K * i / n_e$$

where,  
 $v_s$ = seepage velocity, feet per day (ft/d)  
 $K$ = hydraulic conductivity, feet per day (ft/d)  
 $i$ = hydraulic gradient, feet per foot (ft/ft)  
 $n_e$ = effective porosity/specific yield, unitless

<b>Calculated Seepage Velocities (ft/day)</b>				
	K (ft/day)	i (ft/ft)	$n_e$	$v_s$ (ft/day)
Minimum	0.75	0.0184	0.30	0.05
Maximum	3.12	0.0184	0.02	2.9
				Geometric Mean <b>0.36</b>

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

## Qualifiers

### Metals

Qualifier	Qualifier Description
^+	Continuing Calibration Verification (CCV) is outside acceptance limits, high biased.

### General Chemistry

Qualifier	Qualifier Description
E	Result exceeded calibration range.
F1	MS and/or MSD recovery exceeds control limits.

## Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

# Case Narrative

Client: AECOM Technical Services Inc.  
Project/Site: CCR - Basin Electric 2022 - LRS

Job ID: 280-163953-1

**Job ID: 280-163953-1**

**Laboratory: Eurofins Denver**

Narrative

## CASE NARRATIVE

**Client: AECOM Technical Services Inc.**

**Project: CCR - Basin Electric 2022 - LRS**

**Report Number: 280-163953-1**

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

### **RECEIPT**

The samples were received on 6/30/2022 1:50 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 8 coolers at receipt time were 5.2° C, 7.9° C, 8.0° C, 12.4° C, 13.8° C, 19.7° C, 20.1° C and 22.7° C.

The radiochemical analyses requested on the COC are reported under separate cover.

Results for sample RW-1 and RW-2 are reported under separate cover.

### **Receipt Exceptions**

The following sample was submitted for analysis; however, it was not listed on the Chain-of-Custody (COC): Field Blank (280-163953-24). The client instructed the laboratory to log the sample for all analyses - metals, TDS, anions, and radiochemistry.

The following samples were received at the laboratory outside the required temperature criteria for non-rad analysis: 280-163953-10, 280-163953-11, 280-163953-12, 280-163953-13, 280-163953-15, 280-163953-16, 280-163953-22, 280-163953-23 and 280-163953-24. This does not meet regulatory requirements. The client was contacted regarding this issue, and the laboratory was instructed to proceed with analysis.

### **TOTAL RECOVERABLE METALS**

Samples MW-40B (280-163953-1), MW-52B (280-163953-2), MW-49B (280-163953-3), MW-21B (280-163953-5), MW-38C (280-163953-6), DUP-1 (280-163953-7), MW-38B (280-163953-8), MW-53B (280-163953-9), MW-39B (280-163953-10), MW-32B (280-163953-11), MW-36B (280-163953-12), MW-37B (280-163953-13), MW-20B (280-163953-14), MW-14BR (280-163953-15), MW-41B (280-163953-16), MW-43B (280-163953-18), MW-42B (280-163953-19), MW-47B (280-163953-20), MW-46B (280-163953-21), MW-45B (280-163953-22), MW-44B (280-163953-23) and Field Blank (280-163953-24) were analyzed for Total Recoverable Metals in accordance with EPA SW-846 Method 6010C. The samples were prepared on 07/07/2022 and analyzed on 07/08/2022, 07/09/2022, 07/11/2022 and 07/12/2022.

The low level continuing calibration verification (CCVL) associated with batch 280-580399 recovered (70-130%) above the control limit (160%) for Li. The MB, LCS, SD and MS associated with this CCVL were non-detects and within control limit for the affected analytes; therefore, the data have been reported.

The low level continuing calibration verification (CCVL) associated with 280-580535 failed above the upper control limit for Li. The

### Laboratory: Eurofins Denver (Continued)

associated samples contained the affected analyte at a level greater than 10x the value in the CCVL; therefore the data have been reported. CCVL 280-580535/64 and 280-163427-E-1-F

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

### **TOTAL RECOVERABLE METALS (ICPMS)**

Samples MW-40B (280-163953-1), MW-52B (280-163953-2), MW-49B (280-163953-3), MW-21B (280-163953-5), MW-38C (280-163953-6), DUP-1 (280-163953-7), MW-38B (280-163953-8), MW-53B (280-163953-9), MW-39B (280-163953-10), MW-32B (280-163953-11), MW-36B (280-163953-12), MW-37B (280-163953-13), MW-20B (280-163953-14), MW-14BR (280-163953-15), MW-41B (280-163953-16), MW-43B (280-163953-18), MW-42B (280-163953-19), MW-47B (280-163953-20), MW-46B (280-163953-21), MW-45B (280-163953-22), MW-44B (280-163953-23) and Field Blank (280-163953-24) were analyzed for total recoverable metals (ICPMS) in accordance with EPA SW-846 Method 6020A. The samples were prepared on 07/07/2022 and analyzed on 07/08/2022 and 07/11/2022.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

### **TOTAL MERCURY**

Samples MW-40B (280-163953-1), MW-52B (280-163953-2), MW-49B (280-163953-3), MW-21B (280-163953-5), MW-38C (280-163953-6), DUP-1 (280-163953-7), MW-38B (280-163953-8), MW-53B (280-163953-9), MW-39B (280-163953-10), MW-32B (280-163953-11), MW-36B (280-163953-12), MW-37B (280-163953-13), MW-20B (280-163953-14), MW-14BR (280-163953-15), MW-41B (280-163953-16), MW-43B (280-163953-18), MW-42B (280-163953-19), MW-47B (280-163953-20), MW-46B (280-163953-21), MW-45B (280-163953-22), MW-44B (280-163953-23) and Field Blank (280-163953-24) were analyzed for total mercury in accordance with EPA SW-846 Methods 7470A. The samples were prepared on 06/30/2022 and 07/07/2022 and analyzed on 07/01/2022 and 07/08/2022.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

### **TOTAL DISSOLVED SOLIDS**

Samples MW-40B (280-163953-1), MW-52B (280-163953-2), MW-49B (280-163953-3), MW-21B (280-163953-5), MW-38C (280-163953-6), DUP-1 (280-163953-7), MW-38B (280-163953-8), MW-53B (280-163953-9), MW-39B (280-163953-10), MW-32B (280-163953-11), MW-36B (280-163953-12), MW-37B (280-163953-13), MW-20B (280-163953-14), MW-14BR (280-163953-15), MW-41B (280-163953-16), MW-43B (280-163953-18), MW-42B (280-163953-19), MW-47B (280-163953-20), MW-46B (280-163953-21), MW-45B (280-163953-22), MW-44B (280-163953-23) and Field Blank (280-163953-24) were analyzed for total dissolved solids in accordance with SM20 2540C. The samples were analyzed on 07/01/2022, 07/05/2022 and 07/07/2022.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

### **ANIONS (28 DAYS)**

Samples MW-40B (280-163953-1), MW-52B (280-163953-2), MW-49B (280-163953-3), MW-21B (280-163953-5), MW-38C (280-163953-6), DUP-1 (280-163953-7), MW-38B (280-163953-8), MW-53B (280-163953-9), MW-39B (280-163953-10), MW-32B (280-163953-11), MW-36B (280-163953-12), MW-37B (280-163953-13), MW-20B (280-163953-14), MW-14BR (280-163953-15), MW-41B (280-163953-16), MW-43B (280-163953-18), MW-42B (280-163953-19), MW-47B (280-163953-20), MW-46B (280-163953-21), MW-45B (280-163953-22), MW-44B (280-163953-23) and Field Blank (280-163953-24) were analyzed for anions (28 days) in accordance with EPA SW-846 Method 9056A (28 Days). The samples were analyzed on 07/01/2022, 07/02/2022, 07/05/2022, 07/06/2022, 07/07/2022 and 07/08/2022.

Chloride and Fluoride failed the recovery criteria high for the MS of sample MW-36BMS (280-163953-12) in batch 280-579709. Chloride and Fluoride failed the recovery criteria high for the MSD of sample MW-36BMSD (280-163953-12) in batch 280-579709.

Chloride and Fluoride failed the recovery criteria high for the MS of sample MW-21BMS (280-163953-5) in batch 280-579709. Chloride and Fluoride failed the recovery criteria high for the MSD of sample MW-21BMSD (280-163953-5) in batch 280-579709.

Samples MW-40B (280-163953-1)[5X], MW-52B (280-163953-2)[5X], MW-49B (280-163953-3)[5X], MW-21B (280-163953-5)[5X], MW-38C (280-163953-6)[2X], DUP-1 (280-163953-7)[2X], MW-38B (280-163953-8)[5X], MW-38B (280-163953-8)[50X], MW-53B (280-163953-9)[2X], MW-39B (280-163953-10)[5X], MW-32B (280-163953-11)[10X], MW-36B (280-163953-12)[5X], MW-37B (280-163953-13)[5X], MW-20B (280-163953-14)[5X], MW-14BR (280-163953-15)[5X], MW-41B (280-163953-16)[5X], MW-43B (280-163953-18)[5X], MW-42B (280-163953-19)[20X], MW-42B (280-163953-19)[5X], MW-47B (280-163953-20)[5X], MW-45B (280-163953-22)[5X] and MW-44B

#### General Chemistry

Method 9056A: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 280-579709 were outside control limits for Chloride and Fluoride. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method 9056A: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 280-579709 were outside control limits for Chloride and Fluoride. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method 9056A: Due to the high concentration of Sulfate, the matrix spike / matrix spike duplicate (MS/MSD) for analytical batch 280-579709 could not be evaluated for accuracy and precision. The associated laboratory control sample (LCS) met acceptance criteria.

Method 9056A: The matrix spike duplicate (MSD) recovery for analytical batch 280-579709 was outside control limits for Sulfate. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Methods 300.0, 9056A: Due to the high concentration of Sulfate, the matrix spike / matrix spike duplicate (MS/MSD) for analytical batch 280-579709 could not be evaluated for accuracy and precision. The associated laboratory control sample (LCS) met acceptance criteria.

Method 9056A: Due to the high concentration of Chloride, the matrix spike / matrix spike duplicate (MS/MSD) for analytical batch 280-580183 could not be evaluated for accuracy and precision. The associated laboratory control sample (LCS) met acceptance criteria.

Methods 300.0, 9056A: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 280-580183 were outside control limits for Sulfate. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Note: Since laboratory accreditations are subject to change, Eurofins TestAmerica places the ownership of method, analytic & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/test/matrix being analyzed, the samples must be shipped back to the Eurofins TestAmerica laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins TestAmerica attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins TestAmerica.

Eurofins Cooler # <u>1</u>	Foam Box Client Cooler Box Other _____	
Packing material used: <u>Bubble Wrap</u>	Foam Plastic Bag None Other _____	
COOLANT: <u>Wet Ice</u>	Blue Ice Dry Ice Water None	
1. Cooler temperature upon receipt		
IR GUN# IR-13 (CF 0.0 °C) Observed Cooler Temp. <u>1.8</u> °C Corrected Cooler Temp. <u>1.8</u> °C		
IR GUN #IR-15 (CF -0.7°C) Observed Cooler Temp. _____ °C Corrected Cooler Temp. _____ °C		
2. Were tamper/custody seals on the outside of the cooler(s)? If Yes Quantity <u>1</u>		
-Were the seals on the outside of the cooler(s) signed & dated?		
-Were tamper/custody seals on the bottle(s) or bottle kits (LLHg/MeHg)?		
-Were tamper/custody seals intact and uncompromised?		
3. Shippers' packing slip attached to the cooler(s)?		
4. Did custody papers accompany the sample(s)?		
5. Were the custody papers relinquished & signed in the appropriate place?		
6. Was/were the person(s) who collected the samples clearly identified on the COC?		
7. Did all bottles arrive in good condition (Unbroken)?		
8. Could all bottle labels (ID/Date/Time) be reconciled with the COC?		
9. For each sample, does the COC specify preservatives (Y/N), # of containers (Y/N), and sample type of grab/comp(Y/N)?		
10. Were correct bottle(s) used for the test(s) indicated?		
11. Sufficient quantity received to perform indicated analyses?		
12. Are these work share samples and all listed on the COC? If yes, Questions 13-17 have been checked at the originating laboratory.		
13. Were all preserved sample(s) at the correct pH upon receipt?		
14. Were VOAs on the COC?		
15. Were air bubbles >6 mm in any VOA vials? <input checked="" type="checkbox"/> Larger than this.		
16. Was a VOA trip blank present in the cooler(s)? Trip Blank Lot # _____		
17. Was a LL Hg or Me Hg trip blank present? _____		
Contacted PM _____ Date _____ by _____ via Verbal Voice Mail Other _____		
Concerning _____

## Login Sample Receipt Checklist

Client: AECOM Technical Services Inc.

Job Number: 280-163953-1

**Login Number:** 163953

**List Source:** Eurofins Denver

**List Number:** 1

**Creator:** Roehsner, Karen P

Question	Answer	Comment	
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True		1
The cooler's custody seal, if present, is intact.	N/A		2
Sample custody seals, if present, are intact.	True		3
The cooler or samples do not appear to have been compromised or tampered with.	True		4
Samples were received on ice.	False	Water present in cooler; indicates evidence of melted ice.	5
Cooler Temperature is acceptable.	False	Cooler temperature outside required temperature criteria.	6
Cooler Temperature is recorded.	True		7
COC is present.	True		8
COC is filled out in ink and legible.	True		9
COC is filled out with all pertinent information.	True		10
Is the Field Sampler's name present on COC?	True		11
There are no discrepancies between the containers received and the COC.	False		12
Samples are received within Holding Time (excluding tests with immediate HTs)	True		13
Sample containers have legible labels.	True		14
Containers are not broken or leaking.	True		
Sample collection date/times are provided.	True		
Appropriate sample containers are used.	True		
Sample bottles are completely filled.	True		
Sample Preservation Verified.	N/A		
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True		
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A		
Multiphasic samples are not present.	True		
Samples do not require splitting or compositing.	True		
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

## Qualifiers

### Rad

#### Qualifier

#### Qualifier Description

U Result is less than the sample detection limit.

## Glossary

### Abbreviation

#### These commonly used abbreviations may or may not be present in this report.

¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

# Case Narrative

Client: AECOM Technical Services Inc.  
Project/Site: CCR - Basin Electric 2022 - LRS

Job ID: 280-163953-2

**Job ID: 280-163953-2**

**Laboratory: Eurofins Denver**

Narrative

## CASE NARRATIVE

**Client: AECOM Technical Services Inc.**

**Project: CCR - Basin Electric 2022 - LRS**

**Report Number: 280-163953-2**

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

### **RECEIPT**

The samples were received on 6/30/2022 1:50 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 8 coolers at receipt time were 5.2° C, 7.9° C, 8.0° C, 12.4° C, 13.8° C, 19.7° C, 20.1° C and 22.7° C.

The radiochemical analyses requested on the COC are reported under this SDG. All other analysis requested is reported separate cover.

Results for samples RW-1 and RW-2 are reported under separate cover.

### **RADIUM-226 (GFPC)**

Samples MW-40B (280-163953-1), MW-52B (280-163953-2), MW-49B (280-163953-3), MW-21B (280-163953-5), MW-38C (280-163953-6), DUP-1 (280-163953-7), MW-38B (280-163953-8), MW-53B (280-163953-9), MW-39B (280-163953-10), MW-32B (280-163953-11), MW-36B (280-163953-12), MW-37B (280-163953-13), MW-20B (280-163953-14), MW-14BR (280-163953-15), MW-41B (280-163953-16), MW-43B (280-163953-18), MW-42B (280-163953-19), MW-47B (280-163953-20), MW-46B (280-163953-21), MW-45B (280-163953-22), MW-44B (280-163953-23) and Field Blank (280-163953-24) were analyzed for Radium-226 (GFPC) in accordance with SW 846 9315. The samples were prepared on 07/08/2022 and 07/11/2022 and analyzed on 08/01/2022 and 08/02/2022.

Methods 903.0, 9315: Radium-226 prep batch 160-573264:

Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. 280-163953-21, 280-163953-22, 280-163953-23, 280-163953-24, LCS 160-573264/2-A, MB 160-573264/1-A.

Method 9315: Radium-226 prep batch 160-573463:

Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. 280-163953-1, 280-163953-2, 280-163953-3, 280-163953-5, 280-163953-5[MS], 280-163953-5[MSD], 280-163953-6, 280-163953-7, 280-163953-8, 280-163953-9, 280-163953-10, 280-163953-11, 280-163953-12, 280-163953-13, 280-163953-14, 280-163953-15, 280-163953-16, 280-163953-18, 280-163953-19, 280-163953-20, LCS 160-573463/2-A and MB 160-573463/1-A

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### RADIUM-228

Samples MW-40B (280-163953-1), MW-52B (280-163953-2), MW-49B (280-163953-3), MW-21B (280-163953-5), MW-38C (280-163953-6), DUP-1 (280-163953-7), MW-38B (280-163953-8), MW-53B (280-163953-9), MW-39B (280-163953-10), MW-32B (280-163953-11), MW-36B (280-163953-12), MW-37B (280-163953-13), MW-20B (280-163953-14), MW-14BR (280-163953-15), MW-41B (280-163953-16), MW-43B (280-163953-18), MW-42B (280-163953-19), MW-47B (280-163953-20), MW-46B (280-163953-21), MW-45B (280-163953-22), MW-44B (280-163953-23) and Field Blank (280-163953-24) were analyzed for Radium-228 in accordance with 9320. The samples were prepared on 07/08/2022 and 07/11/2022 and analyzed on 07/15/2022 and 07/18/2022.

Methods 904.0, 9320: Radium-228 Batch 573265

The LCS recovered at (129%). The limits in our LIMS system at 75-125 reflect the requirements of a regulatory agency that represents a large amount of our work. However the samples associated with this LCS are not from this agency and are therefore held to our in-house statistical limits of (62-148%) per method requirements. The LCS passes, no further action is required. LCS 160-573265/2-A

Methods 904.0, 9320: Radium-228 batch 573265

Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.

280-163953-21, 280-163953-22, 280-163953-23, 280-163953-24, LCS 160-573265/2-A, MB 160-573265/1-A and 160-46112-B-1-D DU

Method 9320: Radium-228 Batch 573467

Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.

280-163953-1, 280-163953-2, 280-163953-3, 280-163953-5, 280-163953-5[MS], 280-163953-5[MSD], 280-163953-6, 280-163953-7, 280-163953-8, 280-163953-9, 280-163953-10, 280-163953-11, 280-163953-12, 280-163953-13, 280-163953-14, 280-163953-15, 280-163953-16, 280-163953-18, 280-163953-19, 280-163953-20, LCS 160-573467/2-A and MB 160-573467/1-A

Methods 904.0, 9320: Radium-228 batch 573265

Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.

160-46112-B-1-C

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### RADIUM-226/RADIUM-228 (GFPC)

Samples MW-40B (280-163953-1), MW-52B (280-163953-2), MW-49B (280-163953-3), MW-21B (280-163953-5), MW-38C (280-163953-6), DUP-1 (280-163953-7), MW-38B (280-163953-8), MW-53B (280-163953-9), MW-39B (280-163953-10), MW-32B (280-163953-11), MW-36B (280-163953-12), MW-37B (280-163953-13), MW-20B (280-163953-14), MW-14BR (280-163953-15), MW-41B (280-163953-16), MW-43B (280-163953-18), MW-42B (280-163953-19), MW-47B (280-163953-20), MW-46B (280-163953-21), MW-45B (280-163953-22), MW-44B (280-163953-23) and Field Blank (280-163953-24) were analyzed for Radium-226/Radium-228 (GFPC) in accordance with 9315/9320. The samples were analyzed on 08/02/2022 and 08/03/2022.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

# Accreditation/Certification Summary

Client: AECOM Technical Services Inc.  
Project/Site: CCR - Basin Electric 2022 - LRS

Job ID: 280-163953-2

## Laboratory: Eurofins St. Louis

All accreditations/certifications held by this laboratory are listed. Not all accreditations/certifications are applicable to this report.

Note Since laboratory accreditations are subject to change, Eurofins TestAmerica places the ownership of method, analysis & accreditation compliance upon out subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/test/matrix being analyzed, the samples must be shipped back to the Eurofins TestAmerica laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins TestAmerica's attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins TestAmerica.

Inorganic and Radiochemistry  
Limited Data Validation Report

Basin Electric Laramie, Wyoming  
Groundwater Sampling – June 2022  
Analyzed by Eurofins TestAmerica Laboratories

**Prepared By Jamie Herman  
Chemist**

## **Overview**

The samples analyzed for the June 2022 sampling event are listed in the Table of Samples Validated (page 3). Limited data validation was performed on a total of nineteen groundwater samples, one field duplicate sample, and one field blank Quality Control (QC) sample.

Samples were submitted to Eurofins TestAmerica Laboratories of Denver, Colorado (TA-DEN). The reviewed analyses were Select Total Metals by SW-846 Methods 6010C, 6020A, and 7470A, Chloride, Fluoride, and Sulfate by SW-846 Method 9056A, Total Dissolved Solids (TDS) by SM2540C, Radium-226 by SW-846 Method 9315, Radium-228 by SW-846 Method 9320, and combined Radium-226 and Radium-228 by calculation.

The Analytical Limited Data Validation Checklist is presented as pages 4-9. Data were evaluated using guidance set forth in the *United States Environmental Protection Agency (USEPA) contract Laboratory Program (CLP) National Functional Guidelines for Inorganic Superfund Methods Data Review*, document number EPA-542-R-20-006, November 2020; method requirements, and laboratory criteria.

The following data components were reviewed during the data validation procedure:

<b>Submitted Deliverables</b>
Case Narratives (including any assigned laboratory flags)
Chain-of-Custody form(s) and sample integrity
Sample results, reporting limits, dilution factors
Holding times
Method (preparation) blank results
Field blank results
Laboratory control sample (LCS), laboratory control sample duplicate (LCSD) results
Matrix spike (MS), matrix spike duplicate (MSD) results
Laboratory duplicate (or spiked duplicate) results
Field duplicate (FD) results (calculated Relative Percent Differences [RPD])
Electronic data deliverables (EDDs) – EQuIS format

### **Data Validation Qualifiers Assigned During this Review**

- J+ The result is an estimated quantity, but the result may be biased high.
- J The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
- R The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.

Assigned qualifiers are detailed in the Analytical Data Validation Checklist and are summarized in the Table of Qualified Analytical Results (page 10).

### **Overall Data Assessment**

Field and laboratory precision, field and laboratory accuracy, method compliance, and data set completeness are determined to be acceptable based on the data reported. With the exception of the anions and/or total dissolved solids results for samples MW-14BR and Field Blank which were qualified as unusable as the samples were received at an elevated temperature, the completeness of the data set was calculated to be greater than 98% and is acceptable. All reported data are suitable for their intended use as reported with the clarifications and qualifications noted.

Precision:	X	Acceptable	Unacceptable	JH	Initials
Comments: Precision is the measure of variability of individual sample measurements. Field precision was evaluated by reviewing the field duplicate results, and laboratory precision was evaluated by reviewing method duplicate sample results, laboratory control sample (LCS) to laboratory control sample duplicate (LCSD) results, and matrix spike (MS) to matrix spike duplicate (MSD) results.					
The following criteria was used to evaluate the field duplicate results:					
	<ul style="list-style-type: none"> <li>• For results where both reported values were greater than five times the reporting limit (RL), the relative percent difference between the samples and its field duplicate were compared against a criterion of 30%.</li> <li>• For results where either value reported was less than five times the RL, the absolute difference between the results was compared to a criterion of agreement within <math>\pm 2</math> times the RL</li> <li>• The replicate error ratio (RER) for radiochemical parameters was <math>\leq 2</math>.</li> </ul>				
Laboratory criteria was used to evaluate laboratory precision.					
Field and laboratory precision is acceptable because no data are rejected. Precision measurements are reviewed in items 17 and 21.					
Accuracy:	X	Acceptable	Unacceptable	JH	Initials
Comments: Field accuracy, a measure of the sampling bias, can be determined by reviewing field and equipment blank results for evidence of sample contamination stemming from sampling activities and/or field conditions. Laboratory accuracy is a measure of the system bias, and was measured by evaluating LCS, MS, and MSD percent recoveries (%Rs). LCS %Rs demonstrated the overall performance of the analysis. MS, MSD %Rs provided information on sample matrix interferences. Accuracy measurements were evaluated using laboratory control limits. Overall field and laboratory accuracy is acceptable because the majority of the results are unqualified based on accuracy and no data are rejected. Accuracy measurements are reviewed in items 12, 14, 15, 16, and 20.					
Method Compliance:	X	Acceptable	Unacceptable	JH	Initials
Comments: For this data set, method compliance was determined by evaluating sample integrity, holding time, reporting limits, and laboratory blanks against method specified requirements. Overall method compliance is acceptable because the majority of the results were unqualified based on the method compliance parameters reviewed. Method compliance measurements are also reviewed in items 4, 6, 8, 11, 13, 18, 19, 20, and 22.					
Completeness:	X	Acceptable	Unacceptable	JH	Initials
Comments: Completeness is the overall ratio of the number of samples planned versus the number of samples with valid analyses. Determination of completeness included a review of chain of custody records, laboratory analytical methods and reporting limits, laboratory case narratives, and project requirements. Completeness also included 100% review of the laboratory sample data results, QC summary reports, and electronic data deliverables (EDDs). Any EDD modifications were made as documented in item 23.					
With the exception of the fluoride result for sample MW-14BR, and the chloride, fluoride, sulfate, and total dissolved solids results for sample Field Blank, no results were missing or rejected, completeness of the data set was calculated to be greater than 98% and is acceptable.					

<b>VALIDATION CRITERIA CHECK</b>						
Data validation qualifiers potentially assigned during this review:						
J+	The result is an estimated quantity, but the result may be biased high.					
J	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.					
R	The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.					
The following comments identifying sample results requiring qualification are in bold type. The other comments are of interest, but qualification of the sample results is not necessary.						
1. Did the laboratory identify any non-conformances related to the analytical results?		<input checked="" type="checkbox"/>	Yes		No	JH
Comments: Data qualification, if any, related to the narrative comments and/or assigned laboratory flags contained in the analytical reports are discussed in the following sections.						
2. Were sample Chain-of-Custody (COC) forms complete?			Yes	<input checked="" type="checkbox"/>	No	JH
Comments: With the exceptions noted below, no issues were observed, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt.						
<b>Data Packages 280-163953-1 and 280-163953-2</b>						
Samples RW-1 and RW-2 listed on the COC are included in separate data packages (280-163953-3 and 280-163953-4). The analytical results associated with these samples were not considered as part of this validation.						
The laboratory noted sample Field Blank was received, but not included on the COC. As the laboratory logged the sample per the volume received for total metals, total dissolved solids (TDS), anions, radium-226 and radium-228, further action was not considered necessary.						
3. Were all the analyses requested for the samples on the COCs completed by the laboratory?		<input checked="" type="checkbox"/>	Yes		No	JH
Comments: All requested analyses were completed by the laboratory.						
4. Were samples received in good condition and at the appropriate temperature?			Yes	<input checked="" type="checkbox"/>	No	JH
Comments: With the exceptions noted below, all samples were received intact and within the recommended <6°C temperature for the applicable methods.						
<b>Data Package 280-163953-1</b>						
The laboratory noted samples MW-39B, MW-32B, MW-36B, MW37B, MW-14BR, MW-41B, MW-45B, MW-44B, and Field Blank were received at a temperature >10°C for TDS and anions analysis. The associated detected results were qualified as estimated due to temperature preservation (J t) and the non-detected results were qualified as unusable due to temperature preservation (R t).						
<b>Refer to the Table of Qualified Analytical Results for a listing of the samples, analytes, and concentrations qualified (page 10).</b>						
5. Were the reported analytical methods in compliance with WP/QAPP, permit, or COC?		<input checked="" type="checkbox"/>	Yes		No	JH
Comments: The reported target analytes and methods are in compliance with parameters and methods listed on the COC.						
6. Were detection limits in accordance with WP/QAPP, permit, or method?		<input checked="" type="checkbox"/>	Yes		No	JH
Comments: No results were reported as non-detect at elevated reporting limits.						
7. Do the laboratory reports include only those constituents requested to be reported for a specific analytical method?		<input checked="" type="checkbox"/>	Yes		No	JH
Comments: Only the requested target analytes were reported.						

<b>VALIDATION CRITERIA CHECK</b>						
8. Were sample holding times met?	<input checked="" type="checkbox"/>	Yes		No	JH	Initials
Comments: Sample preparation and analytical holding times were within the method requirements.						
9. Were correct concentration units reported?	<input checked="" type="checkbox"/>	Yes		No	JH	Initials
Comments: Metals and general chemistry data were reported as mg/L (ppm) and radiochemistry data was reported in picocuries per liter (pCi/L).						
10. Were the reporting requirements for flagged data met?	<input checked="" type="checkbox"/>	Yes		No	JH	Initials
Comments: Laboratory flags were reviewed and considered during the data validation procedure. Data validation qualifiers override assigned laboratory flags.						
11. Were laboratory blank samples free of target analyte contamination?		Yes	<input checked="" type="checkbox"/>	No	JH	Initials
Comments: With the following exceptions, the laboratory blanks were free of target analyte contamination.						
Laboratory Blank/ Associated Samples	Analyte	Concentration (pCi/L)	Qualification			
MB 160-573265/1-A MW-46B, MW-45B MW-44B, Field Blank	Radium-228	0.8655	The associated results reported at concentrations <5x the concentration of the blank contamination were qualified estimated (J+ bl).			
MB 160-573467/1-A MW-40B, MW-52B, MW-49B, MW-21B, MW-38C, DUP-1, MW-38B, MW-53B, MW-39B, MW-32B, MW-36B, MW-37B, MW-20B, MW-14BR, MW-41B, MW-43B, MW-42B, MW-47B	Radium-228	0.5433	The associated results reported at concentrations <5x the concentration of the blank contamination were qualified estimated (J+ bl).			
<small>&lt; – Less Than bl – Laboratory blank contamination J+ – The result is an estimated quantity, but the result may be biased high.</small>						
<b>Refer to the Table of Qualified Analytical Results for a listing of the samples, analytes, and concentrations qualified (page 10).</b>						
12. Were trip blank, field blank, and/or equipment rinse blank samples free of target analyte contamination?		Yes	<input checked="" type="checkbox"/>	No	JH	Initials
Comments: A trip blank and equipment blank were not required for this sampling event.						
One field blank was collected. With the following exception, the field blank was free of target analyte contamination.						
<b>Data Package 280-163953-1</b>						
Calcium was detected in the field blank at a concentration of 0.277 mg/L. As the associated sample results were reported at concentrations greater than 5x the concentration of the field blank contamination, data qualification was not considered necessary.						
13. Were instrument calibrations within method or data validation control limits?	<input type="checkbox"/>	Yes	<input type="checkbox"/>	No	JH	Initials
Comments: Not applicable for the analytical methods reported.						
14. Were surrogate/tracer recoveries within control limits?	<input checked="" type="checkbox"/>	Yes		No	JH	Initials
Comments: The associated tracer recoveries were within control limits.						
15. Were laboratory control sample recoveries and relative percent difference (RPDs) within control limits?	<input checked="" type="checkbox"/>	Yes		No	JH	Initials
Comments: LCS and/or LCSD percent recoveries and RPDs were within laboratory control limits.						

<b>VALIDATION CRITERIA CHECK</b>																																					
16. Were matrix spike recoveries and RPDs within control limits?				Yes	<input checked="" type="checkbox"/>	No	JH																														
Comments: A matrix spike/matrix spike duplicate (MS/MSD) was performed on sample MW-21B for all analyses, samples MW-36B and MW-45B for chloride and fluoride, and sample MW53B for sulfate.																																					
<table border="1"> <thead> <tr> <th>Sample</th> <th>Analyte</th> <th>%R (Limits)</th> <th>RPD (Limits)</th> <th colspan="4">Comment</th> </tr> </thead> <tbody> <tr> <td rowspan="2">MW-21B</td> <td>Chloride</td> <td><b>141/136</b> (80-120)</td> <td>1 (20)</td> <td colspan="4" rowspan="2">As the potential bias was considered to be high, the associated detected results were qualified as estimated (J+ m).</td> </tr> <tr> <td>Fluoride</td> <td><b>128/125</b> (80-120)</td> <td>2 (20)</td> </tr> <tr> <td rowspan="2">MW-36B</td> <td>Chloride</td> <td><b>132/144</b> (80-120)</td> <td>5 (20)</td> <td colspan="4" rowspan="2">As the potential bias was considered to be high, the associated detected results were qualified as estimated (J+ m).</td> </tr> <tr> <td>Fluoride</td> <td><b>131/142</b> (80-120)</td> <td>7 (20)</td> </tr> </tbody> </table>								Sample	Analyte	%R (Limits)	RPD (Limits)	Comment				MW-21B	Chloride	<b>141/136</b> (80-120)	1 (20)	As the potential bias was considered to be high, the associated detected results were qualified as estimated (J+ m). <small>Bold indicates a recovery or RPD outside acceptance limit. %R – Percent Recovery J+ – Estimated with a potential high bias</small>				<small>m – Matrix spike/matrix spike duplicate recovery failure RPD – Relative Percent Difference</small>																																	
<b>Refer to the Table of Qualified Analytical Results for a listing of the samples, analytes, and concentrations qualified (page 10).</b>																																					
17. Were laboratory duplicate RPDs and/or serial dilution %Ds within control limits?				<input checked="" type="checkbox"/>	Yes	No	JH																														
Comments: A laboratory duplicate was performed for anions and total dissolved solids. The RPDs for target analytes in project-specific laboratory duplicate samples were within laboratory control limits.																																					
Serial dilutions were not evaluated for this level of validation.																																					
18. Were organic system performance criteria met?				<input type="checkbox"/>	Yes	<input type="checkbox"/>	No JH																														
Comments: Not applicable for this level of limited data validation or for the methods reported.																																					
19. Were internal standards within method criteria for ICP-MS sample analyses?				<input type="checkbox"/>	Yes	<input type="checkbox"/>	No JH																														
Comments: Not evaluated for this level of data validation. No internal standard issues were noted in the case narrative.																																					
20. Were system performance criteria met?				<input type="checkbox"/>	Yes	<input type="checkbox"/>	No JH																														
Comments: Not evaluated for this level of data validation. Inorganic system performance data were not supplied in the analytical laboratory reports and are therefore not included in this data review. However, the laboratory case narrative associated with data package 280-163953-1 noted the low-level continuing calibration verification (CCVL) associated with batch 280-580399 recovered above the upper control limit for lithium (160%, limit 70-130%). As the potential bias was considered high, the associated detected lithium results for the associated samples MW-40B, MW-52B, and MW-49B were qualified as estimated (J+ c).																																					
<b>Refer to the Table of Qualified Analytical Results for a listing of the samples, analytes, and concentrations qualified (page 10).</b>																																					
21. Were field duplicates collected? If so, discuss the precision (RPD and/or RER) of the results.				<input checked="" type="checkbox"/>	Yes	No	JH																														
Duplicate Sample No.		DUP-01	Primary Sample No.			MW-38C																															
Comments: The duplicate sample pair met the acceptance criteria.																																					
22. Were qualitative criteria for organic target analyte identification met?				<input type="checkbox"/>	Yes	<input type="checkbox"/>	No JH																														
Comments: Not applicable for this level of limited data validation or for the methods reported.																																					

VALIDATION CRITERIA CHECK						
23. Were 10% of the EDD concentrations and reporting limits compared to the hardcopy data reports?	X	Yes		No	JH	Initials
Comments: During the validation procedure, 10% of the positive sample concentrations and 100% of the RLs for project samples were compared to hardcopy laboratory reports.						
The data validator made sure that RLs were entered into the correct EDD fields.						
24. General Comments: Data were also evaluated using guidance set forth in the <i>United States Environmental Protection Agency (USEPA) contract Laboratory Program (CLP) National Functional Guidelines for Inorganic Superfund Methods Data Review</i> , document number EPA-542-R-20-006, November 2020; method requirements, and laboratory criteria. All data is considered usable.

280-163953-2	MW-45B	280-163953-22	SW9320	Radium-228	J+	bl

bl – Laboratory blank contamination

c – Calibration Issue

ID – Identification

J+ – The result is an estimated quantity, but the result may be biased high.

J – The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.

m – Matrix spike/matrix spike duplicate recovery failure

R – The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.

t – Temperature Preservation Issue

## Qualifiers

### Rad

Qualifier	Qualifier Description
F	MS/MSD Recovery and/or RPD exceeds the control limits
F1	MS and/or MSD recovery exceeds control limits.
G	The Sample MDC is greater than the requested RL.
U	Result is less than the sample detection limit.

## Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
□	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Narrative

## CASE NARRATIVE

**Client: AECOM Technical Services Inc.**

**Project: Basin 2020 Support**

**Report Number: 280-167087-1**

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

### **RECEIPT**

The samples were received on 9/30/2022 11:10 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 7 coolers at receipt time were 0.2° C, 0.3° C, 0.5° C, 0.9° C, 3.1° C, 12.0° C and 15.8° C.

### **Receipt Exceptions**

The two coolers that were above 6 degrees C were filled with only Nitric Acid preserved containers that did not require temperature preservation.

Per client request, the results for samples RW-2 (280-167087-22) and RW-1 (280-167087-23) are reported under 280-167087-3 (chemical) and 280-167087-4 (radiochemical).

### **RADIUM-226 (GFPC)**

Samples MW-42B (280-167087-1), MW-43B (280-167087-2), MW-47B (280-167087-3), MW-46B (280-167087-4), MW-45B (280-167087-5), MW-44B (280-167087-6), MW-37B (280-167087-7), MW-36B (280-167087-8), MW-32B (280-167087-9), MW-14BR (280-167087-10), DUP-1 (280-167087-11), MW-20B (280-167087-12), MW-38B (280-167087-13), MW-49B (280-167087-14), MW-21B (280-167087-15), MW-41B (280-167087-16), MW-53B (280-167087-17), MW-52B (280-167087-18), FB-1 (280-167087-19), MW-39B (280-167087-20) and MW-40B (280-167087-21) were analyzed for Radium-226 (GFPC) in accordance with SW 846 9315. The samples were prepared on 10/07/2022 and 10/12/2022 and analyzed on 11/02/2022 and 11/03/2022.

Method 9315: Radium-226 batch 585049

Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date

280-167087-1, 280-167087-2, 280-167087-3, LCS 160-585049/2-A, MB 160-585049/1-A, 240-173918-E-12-A and 240-173918-D-12-A DU

Method 9315: Radium-226 batch 585732

Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. 280-167087-15, 280-167087-16, 280-167087-17, 280-167087-18, 280-167087-19, 280-167087-20, 280-167087-21, LCS 160-585732/2-A, MB 160-585732/1-A

# Case Narrative

Client: AECOM Technical Services Inc.  
Project/Site: Basin 2020 Support

Job ID: 280-167087-1

## Job ID: 280-167087-1 (Continued)

### Laboratory: Eurofins Denver (Continued)

Methods 903.0, 9315: Radium-226 batch 585729

The matrix spike (MS) recoveries for Radium-226 were outside control limits. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits. 280-167087-12[MS]

Methods 903.0, 9315: Radium-226 batch 585729

The sample duplicate (DUP) precision was outside control limits due to the Matrix spike failure attributed to suspected sample matrix interference. 280-167087-12[MSD]

Methods 903.0, 9315: Radium-226 batch 585729

Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. 280-167087-4, 280-167087-5, 280-167087-6, 280-167087-7, 280-167087-8, 280-167087-9, 280-167087-10, 280-167087-11, 280-167087-12, 280-167087-12[MS], 280-167087-12[MSD], 280-167087-13, 280-167087-14, LCS 160-585729/2-A and MB 160-585729/1-A

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

### RADIUM-228

Samples MW-42B (280-167087-1), MW-43B (280-167087-2), MW-47B (280-167087-3), MW-46B (280-167087-4), MW-45B (280-167087-5), MW-44B (280-167087-6), MW-37B (280-167087-7), MW-36B (280-167087-8), MW-32B (280-167087-9), MW-14BR (280-167087-10), DUP-1 (280-167087-11), MW-20B (280-167087-12), MW-38B (280-167087-13), MW-49B (280-167087-14), MW-21B (280-167087-15), MW-41B (280-167087-16), MW-53B (280-167087-17), MW-52B (280-167087-18), FB-1 (280-167087-19), MW-39B (280-167087-20) and MW-40B (280-167087-21) were analyzed for Radium-228 in accordance with 9320. The samples were prepared on 10/07/2022 and 10/12/2022 and analyzed on 10/25/2022, 10/26/2022 and 10/28/2022.

Method 9320: Radium-228 batch 585052

Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. 280-167087-1, 280-167087-2, 280-167087-3, LCS 160-585052/2-A, MB 160-585052/1-A.

Methods 904.0, 9320: Radium-228 batch 585731

The matrix spike / matrix spike duplicate (MS/MSD) precision for was outside control limits due to low recovery in the MS. Sample matrix interference is suspected. 280-167087-12[MSD]

Methods 904.0, 9320: Radium-228 batch 585731

The matrix spike (MS) recoveries were outside control limits. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits. 280-167087-12[MS]

Methods 904.0, 9320: Radium-228 batch 585731

Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. 280-167087-4, 280-167087-5, 280-167087-6, 280-167087-7, 280-167087-8, 280-167087-9, 280-167087-10, 280-167087-11, 280-167087-12, 280-167087-12[MS], 280-167087-12[MSD], 280-167087-13, 280-167087-14, LCS 160-585731/2-A and MB 160-585731/1-A

Method 9320: Radium-228 batch 585733

The detection goal was not met for the following sample(s). Samples were prepped at a reduced volume due to the presence of matrix interferences: 280-167087-17 and 280-167087-18. Analytical results are reported with the detection limit achieved.

Method 9320: Radium-228 batch 585733

Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. 280-167087-15, 280-167087-16, 280-167087-17, 280-167087-18, 280-167087-19, 280-167087-20, 280-167087-21, LCS 160-585733/2-A, MB 160-585733/1-A, 480-202216-A-10-C, 480-202216-B-10-B MS and 480-202216-A-10-D MSD

### Chain of Custody Record

Since laboratory accreditations are subject to change, Eurofins TestAmerica places the ownership of method analysis & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/test(s)/matrix being analyzed, the samples must be shipped back to the Eurofins TestAmerica laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins TestAmerica attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said complicity to Eurofins TestAmerica

## Login Sample Receipt Checklist

Client: AECOM Technical Services Inc.

Job Number: 280-167087-1

**Login Number: 167087**

**List Source: Eurofins Denver**

**List Number: 1**

**Creator: Roehsner, Karen P**

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	N/A	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	False	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

## Qualifiers

### General Chemistry

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

## Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

# Case Narrative

Client: AECOM Technical Services Inc.  
Project/Site: Basin 2020 Support

**Job ID: 280-167087-2**

**Laboratory: Eurofins Denver**

Narrative

## CASE NARRATIVE

**Client: AECOM Technical Services Inc.**

**Project: Basin 2020 Support**

**Report Number: 280-167087-2**

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

### **RECEIPT**

The samples were received on 9/30/2022 11:10 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 7 coolers at receipt time were 0.2° C, 0.3° C, 0.5° C, 0.9° C, 3.1° C, 12.0° C and 15.8° C.

### **Receipt Exceptions**

The two coolers that were above 6 degrees C were filled with only Nitric Acid preserved containers.

Per client request, the results for samples RW-2 (280-167087-22) and RW-1 (280-167087-23) are reported under 280-167087-3 (chemical) and 280-167087-4 (radiochemical).

### **TOTAL METALS (ICP)**

Samples MW-42B (280-167087-1), MW-43B (280-167087-2), MW-47B (280-167087-3), MW-46B (280-167087-4), MW-45B (280-167087-5), MW-44B (280-167087-6), MW-37B (280-167087-7), MW-36B (280-167087-8), MW-32B (280-167087-9), MW-14BR (280-167087-10), DUP-1 (280-167087-11), MW-20B (280-167087-12), MW-38B (280-167087-13), MW-49B (280-167087-14), MW-21B (280-167087-15), MW-41B (280-167087-16), MW-53B (280-167087-17), MW-52B (280-167087-18), FB-1 (280-167087-19), MW-39B (280-167087-20) and MW-40B (280-167087-21) were analyzed for Total Metals (ICP) in accordance with EPA SW846 6010D. The samples were prepared and analyzed on 10/04/2022.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

### **TOTAL METALS (ICP/MS)**

Samples MW-42B (280-167087-1), MW-43B (280-167087-2), MW-47B (280-167087-3), MW-46B (280-167087-4), MW-45B (280-167087-5), MW-44B (280-167087-6), MW-37B (280-167087-7), MW-36B (280-167087-8), MW-32B (280-167087-9), MW-14BR (280-167087-10), DUP-1 (280-167087-11), MW-20B (280-167087-12), MW-38B (280-167087-13), MW-49B (280-167087-14), MW-21B (280-167087-15), MW-41B (280-167087-16), MW-53B (280-167087-17), MW-52B (280-167087-18), FB-1 (280-167087-19), MW-39B (280-167087-20) and MW-40B (280-167087-21) were analyzed for Total Metals (ICP/MS) in accordance with SW846 6020B. The samples were prepared on 10/04/2022 and 10/05/2022 and analyzed on 10/05/2022 and 10/06/2022.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

### **TOTAL MERCURY**

Job ID: 280-167087-2

## Job ID: 280-167087-2 (Continued)

### Laboratory: Eurofins Denver (Continued)

Samples MW-42B (280-167087-1), MW-43B (280-167087-2), MW-47B (280-167087-3), MW-46B (280-167087-4), MW-45B (280-167087-5), MW-44B (280-167087-6), MW-37B (280-167087-7), MW-36B (280-167087-8), MW-32B (280-167087-9), MW-14BR (280-167087-10), DUP-1 (280-167087-11), MW-20B (280-167087-12), MW-38B (280-167087-13), MW-49B (280-167087-14), MW-21B (280-167087-15), MW-41B (280-167087-16), MW-53B (280-167087-17), MW-52B (280-167087-18), FB-1 (280-167087-19), MW-39B (280-167087-20) and MW-40B (280-167087-21) were analyzed for total mercury in accordance with EPA SW-846 Methods 7470A. The samples were prepared and analyzed on 10/04/2022 and 10/05/2022.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

### TOTAL DISSOLVED SOLIDS

Samples MW-42B (280-167087-1), MW-43B (280-167087-2), MW-47B (280-167087-3), MW-46B (280-167087-4), MW-45B (280-167087-5), MW-44B (280-167087-6), MW-37B (280-167087-7), MW-36B (280-167087-8), MW-32B (280-167087-9), MW-14BR (280-167087-10), DUP-1 (280-167087-11), MW-20B (280-167087-12), MW-38B (280-167087-13), MW-49B (280-167087-14), MW-21B (280-167087-15), MW-41B (280-167087-16), MW-53B (280-167087-17), MW-52B (280-167087-18), FB-1 (280-167087-19), MW-39B (280-167087-20) and MW-40B (280-167087-21) were analyzed for total dissolved solids in accordance with SM20 2540C. The samples were analyzed on 10/03/2022.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

### ANIONS (28 DAYS)

Samples MW-42B (280-167087-1), MW-43B (280-167087-2), MW-47B (280-167087-3), MW-46B (280-167087-4), MW-45B (280-167087-5), MW-44B (280-167087-6), MW-37B (280-167087-7), MW-36B (280-167087-8), MW-32B (280-167087-9), MW-14BR (280-167087-10), DUP-1 (280-167087-11), MW-20B (280-167087-12), MW-38B (280-167087-13), MW-49B (280-167087-14), MW-21B (280-167087-15), MW-41B (280-167087-16), MW-53B (280-167087-17), MW-52B (280-167087-18), FB-1 (280-167087-19), MW-39B (280-167087-20) and MW-40B (280-167087-21) were analyzed for anions (28 days) in accordance with EPA SW-846 Method 9056A (28 Days). The samples were analyzed on 10/06/2022, 10/07/2022, 10/10/2022, 10/11/2022, 10/12/2022 and 10/14/2022.

Samples MW-42B (280-167087-1)[5X], MW-43B (280-167087-2)[2X], MW-47B (280-167087-3)[2X], MW-46B (280-167087-4)[2X], MW-45B (280-167087-5)[2X], MW-44B (280-167087-6)[5X], MW-37B (280-167087-7)[5X], MW-36B (280-167087-8)[2X], MW-32B (280-167087-9)[5X], MW-14BR (280-167087-10)[2X], DUP-1 (280-167087-11)[2X], MW-20B (280-167087-12)[5X], MW-38B (280-167087-13)[5X], MW-38B (280-167087-13)[50X], MW-49B (280-167087-14)[2X], MW-21B (280-167087-15)[5X], MW-41B (280-167087-16)[5X], MW-53B (280-167087-17)[2X], MW-52B (280-167087-18)[5X], MW-39B (280-167087-20)[5X] and MW-40B (280-167087-21)[2X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Question	Answer	Comment	
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True		1
The cooler's custody seal, if present, is intact.	N/A		2
Sample custody seals, if present, are intact.	True		3
The cooler or samples do not appear to have been compromised or tampered with.	True		4
Samples were received on ice.	True		5
Cooler Temperature is acceptable.	True		6
Cooler Temperature is recorded.	True		7
COC is present.	True		8
COC is filled out in ink and legible.	True		9
COC is filled out with all pertinent information.	True		10
Is the Field Sampler's name present on COC?	False		11
There are no discrepancies between the containers received and the COC.	True		12
Samples are received within Holding Time (excluding tests with immediate HTs)	True		13
Sample containers have legible labels.	True		14
Containers are not broken or leaking.	True		
Sample collection date/times are provided.	True		
Appropriate sample containers are used.	True		
Sample bottles are completely filled.	True		
Sample Preservation Verified.	N/A		
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True		
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A		
Multiphasic samples are not present.	True		
Samples do not require splitting or compositing.	True		
Residual Chlorine Checked.	N/A

Inorganic and Radiochemistry  
Limited Data Validation Report

Basin Electric Laramie, Wyoming  
Groundwater Sampling – September 2022  
Analyzed by Eurofins TestAmerica Laboratories

**Prepared By Katie Abbott  
Chemist**

## **Overview**

The samples analyzed for the September 2022 sampling event are listed in the Table of Samples Validated (page 3). Limited data validation was performed on a total of nineteen groundwater samples, one field duplicate sample, and one field blank Quality Control (QC) sample.

Samples were submitted to Eurofins TestAmerica Laboratories of Denver, Colorado (TA-DEN). The reviewed analyses were Select Total Metals by SW-846 Methods 6010C, 6020A, and 7470A, Chloride, Fluoride, and Sulfate by SW-846 Method 9056A, Total Dissolved Solids (TDS) by SM2540C, Radium-226 by SW-846 Method 9315, Radium-228 by SW-846 Method 9320, and combined Radium-226 and Radium-228 by calculation.

The Analytical Limited Data Validation Checklist is presented as pages 4-8. Data were evaluated using guidance set forth in the *United States Environmental Protection Agency (USEPA) contract Laboratory Program (CLP) National Functional Guidelines for Inorganic Superfund Methods Data Review*, document number EPA-542-R-20-006, November 2020; method requirements, and laboratory criteria.

The following data components were reviewed during the data validation procedure:

<b>Submitted Deliverables</b>
Case Narratives (including any assigned laboratory flags)
Chain-of-Custody form(s) and sample integrity
Sample results, reporting limits, dilution factors
Holding times
Method (preparation) blank results
Field blank results
Laboratory control sample (LCS), laboratory control sample duplicate (LCSD) results
Matrix spike (MS), matrix spike duplicate (MSD) results
Laboratory duplicate (or spiked duplicate) results
Field duplicate (FD) results (calculated Relative Percent Differences [RPD])
Electronic data deliverables (EDDs) – EQuIS format

**Data Validation Qualifiers Assigned During this Review**

- J+ The result is an estimated quantity, but the result may be biased high.  
UJ The result is an estimated quantity.

Assigned qualifiers are detailed in the Analytical Data Validation Checklist and are summarized in the Table of Qualified Analytical Results (page 9).

**Overall Data Assessment**

Field and laboratory precision, field and laboratory accuracy, method compliance, and data set completeness are determined to be acceptable based on the data reported. No data are missing or rejected, therefore the completeness of the data set was calculated to be 100% and is acceptable. All reported data are suitable for their intended use as reported with the clarifications and qualifications noted.

<b>PRECISION, ACCURACY, METHOD COMPLIANCE, AND COMPLETENESS ASSESSMENT</b>						
Precision:	X	Acceptable		Unacceptable	KA	Initials
Comments: Precision is the measure of variability of individual sample measurements. Field precision was evaluated by reviewing the field duplicate results, and laboratory precision was evaluated by reviewing method duplicate sample results, laboratory control sample (LCS) to laboratory control sample duplicate (LCSD) results, and matrix spike (MS) to matrix spike duplicate (MSD) results.						
The following criteria was used to evaluate the field duplicate results:						
	<ul style="list-style-type: none"> <li>For results where both reported values were greater than five times the reporting limit (RL), the relative percent difference between the samples and its field duplicate were compared against a criterion of 30%.</li> <li>For results where either value reported was less than five times the RL, the absolute difference between the results was compared to a criterion of agreement within <math>\pm 2</math> times the RL</li> <li>The replicate error ratio (RER) for radiochemical parameters was <math>\leq 2</math>.</li> </ul>					
Laboratory criteria was used to evaluate laboratory precision.						
Field and laboratory precision is acceptable because no data are rejected. Precision measurements are reviewed in items 17 and 21.						
Accuracy:	X	Acceptable		Unacceptable	KA	Initials
Comments: Field accuracy, a measure of the sampling bias, can be determined by reviewing field and equipment blank results for evidence of sample contamination stemming from sampling activities and/or field conditions. Laboratory accuracy is a measure of the system bias, and was measured by evaluating LCS, MS, and MSD percent recoveries (%Rs). LCS %Rs demonstrated the overall performance of the analysis. MS, MSD %Rs provided information on sample matrix interferences. Accuracy measurements were evaluated using laboratory control limits. Overall field and laboratory accuracy is acceptable because the majority of the results are unqualified based on accuracy and no data are rejected. Accuracy measurements are reviewed in items 12, 14, 15, 16, and 20.						
Method Compliance:	X	Acceptable		Unacceptable	KA	Initials
Comments: For this data set, method compliance was determined by evaluating sample integrity, holding time, reporting limits, and laboratory blanks against method specified requirements. Overall method compliance is acceptable because the majority of the results were unqualified based on the method compliance parameters reviewed. Method compliance measurements are also reviewed in items 4, 6, 8, 11, 13, 18, 19, 20, and 22.						
Completeness:	X	Acceptable		Unacceptable	KA	Initials
Comments: Completeness is the overall ratio of the number of samples planned versus the number of samples with valid analyses. Determination of completeness included a review of chain of custody records, laboratory analytical methods and reporting limits, laboratory case narratives, and project requirements. Completeness also included 100% review of the laboratory sample data results, QC summary reports, and electronic data deliverables (EDDs). Any EDD modifications were made as documented in item 23.						

VALIDATION CRITERIA CHECK						
Data validation qualifiers potentially assigned during this review:						
J+	The result is an estimated quantity, but the result may be biased high.					
UJ	The result is an estimated quantity.					
The following comments identifying sample results requiring qualification are in bold type. The other comments are of interest, but qualification of the sample results is not necessary.						
1. Did the laboratory identify any non-conformances related to the analytical results?		X	Yes		No	KA
Comments: Data qualification, if any, related to the narrative comments and/or assigned laboratory flags contained in the analytical reports are discussed in the following sections.						
2. Were sample Chain-of-Custody (COC) forms complete?		X	Yes		No	KA
Comments: With the exceptions noted below, no issues were observed, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt.						
Samples RW-1 and RW-2 listed on the COC are included in separate data packages (280-167087-3 and 280-167087-4). The analytical results associated with these samples were not considered as part of this validation.						
3. Were all the analyses requested for the samples on the COCs completed by the laboratory?		X	Yes		No	KA
Comments: All requested analyses were completed by the laboratory.						
4. Were samples received in good condition and at the appropriate temperature?		X	Yes		No	KA
Comments: With the exception noted below, all samples were received intact and within the recommended <6°C temperature for the applicable methods.						
The laboratory noted that two coolers were received at 12.0°C and 15.8°C. As the methods associated with the bottles in these coolers do not require temperature preservation, data qualification was not considered necessary.						
5. Were the reported analytical methods in compliance with WP/QAPP, permit, or COC?		X	Yes		No	KA
Comments: The reported target analytes and methods are in compliance with parameters and methods listed on the COC.						
6. Were detection limits in accordance with WP/QAPP, permit, or method?			Yes	X	No	KA
Comments: With the exceptions noted below, no results were reported as non-detect at elevated reporting limits.						
<b>Data Package 280-167087-1</b>						
The laboratory noted that a reduced sample volume was reported for samples MW-53B and MW-52B due to matrix interferences for the analysis of radium-228. The detection limits were adjusted accordingly. The associated non-detect results will need to be evaluated by the end user of the data with respect to project objectives.						
7. Do the laboratory reports include only those constituents requested to be reported for a specific analytical method?		X	Yes		No	KA
Comments: Only the requested target analytes were reported.						
8. Were sample holding times met?		X	Yes		No	KA
Comments: Sample preparation and analytical holding times were within the method requirements.						
9. Were correct concentration units reported?		X	Yes		No	KA
Comments: Metals and general chemistry data were reported as mg/L (ppm) and radiochemistry data was reported in picocuries per liter (pCi/L).						

### VALIDATION CRITERIA CHECK

10. Were the reporting requirements for flagged data met?	<input checked="" type="checkbox"/>	Yes		No	KA	Initials
---	-------------------------------------	-----	--	----	----	----------

Comments: Laboratory flags were reviewed and considered during the data validation procedure. Data validation qualifiers override assigned laboratory flags.

11. Were laboratory blank samples free of target analyte contamination?		Yes	<input checked="" type="checkbox"/>	No	KA	Initials
---	--	-----	-------------------------------------	----	----	----------

Comments: With the following exception, the laboratory blanks were free of target analyte contamination.

Laboratory Blank/ Associated Samples	Analyte	Concentration (pCi/L)	Qualification
MB 160-585731/1-A  MW-46B MW-45B MW-44B MW-37B MW-36B MW-32B MW-14BR DUP-1 MW-20B MW-38B MW-49B	Radium-228	0.5080	The associated results reported at concentrations <5x the concentration of the blank contamination were qualified estimated (J+ bl).

< – Less Than

bl – Laboratory blank contamination

J+ – The result is an estimated quantity, but the result may be biased high.

MB – Method Blank

pCi/L – Picocuries per Liter

### Refer to the Table of Qualified Analytical Results for a listing of the samples, analytes, and concentrations qualified (page 9).

12. Were trip blank, field blank, and/or equipment rinse blank samples free of target analyte contamination?	<input checked="" type="checkbox"/>	Yes		No	KA	Initials
--	-------------------------------------	-----	--	----	----	----------

Comments: A trip blank and equipment blank were not required for this sampling event.

One field blank was collected. The field blank was free of target analyte contamination.

13. Were instrument calibrations within method or data validation control limits?	<input type="checkbox"/>	Yes	<input type="checkbox"/>	No	KA	Initials
---	--------------------------	-----	--------------------------	----	----	----------

Comments: Not applicable for the analytical methods reported.

14. Were surrogate/tracer recoveries within control limits?	<input checked="" type="checkbox"/>	Yes		No	KA	Initials
---	-------------------------------------	-----	--	----	----	----------

Comments: The associated tracer recoveries were within control limits.

15. Were laboratory control sample recoveries and relative percent difference (RPDs) within control limits?	<input checked="" type="checkbox"/>	Yes		No	KA	Initials
---	-------------------------------------	-----	--	----	----	----------

Comments: LCS and/or LCSD percent recoveries and RPDs were within laboratory control limits.

16. Were matrix spike recoveries and RPDs within control limits?		Yes	<input checked="" type="checkbox"/>	No	KA	Initials
--	--	-----	-------------------------------------	----	----	----------

Comments: A matrix spike/matrix spike duplicate (MS/MSD) was performed on sample MW-20B for all analyses. With the exceptions noted below, the recoveries and RPDs/DERs were within control limits.

Sample	Analyte	%R (Limits)	RPD/RER (Limits)	Comment
MW-20B	Radium-226	26/80 (60-140)	3.85 (1)	As the potential bias was considered to be low, and the RER was outside of control limits, the associated result was qualified as estimated (UJ m,ld).
	Radium-228	13/103 (60-140)	4.48 (1)	

Bold indicates a recovery or RPD outside acceptance limit.

%R – Percent Recovery

ld – Laboratory Duplicate

m – Matrix spike/matrix spike duplicate recovery failure

m – Matrix spike/matrix spike duplicate recovery failure

RER – Relative Error Ratio

RPD – Relative Percent Difference

UJ –Estimated

<b>VALIDATION CRITERIA CHECK</b>						
<b>Refer to the Table of Qualified Analytical Results for a listing of the samples, analytes, and concentrations qualified (page 9).</b>						
17. Were laboratory duplicate RPDs and/or serial dilution %Ds within control limits?	X	Yes		No	KA	Initials
Comments: A laboratory duplicate was performed on sample MW-44B for chloride, sample MW-20B for anions, sample MW-46B for fluoride, and sample MW-14BR for total dissolved solids. The RPDs for target analytes in project-specific laboratory duplicate samples were within laboratory control limits. Serial dilutions were not evaluated for this level of validation.						
18. Were organic system performance criteria met?	NA	Yes	NA	No	KA	Initials
Comments: Not applicable for this level of limited data validation or for the methods reported.						
19. Were internal standards within method criteria for ICP-MS sample analyses?	NA	Yes	NA	No	KA	Initials
Comments: Not evaluated for this level of data validation. No internal standard issues were noted in the case narrative.						
20. Were system performance criteria met?	NA	Yes	NA	No	KA	Initials
Comments: Not evaluated for this level of data validation.						
21. Were field duplicates collected? If so, discuss the precision (RPD and/or RER) of the results.	X	Yes		No	KA	Initials
Duplicate Sample No.	DUP-01	Primary Sample No.			MW-14BR	
Comments: The duplicate sample pair met the acceptance criteria.						
22. Were qualitative criteria for organic target analyte identification met?	NA	Yes	NA	No	KA	Initials
Comments: Not applicable for this level of limited data validation or for the methods reported.						
23. Were 10% of the EDD concentrations and reporting limits compared to the hardcopy data reports?	X	Yes		No	KA	Initials
Comments: During the validation procedure, 10% of the positive sample concentrations and 100% of the RLs for project samples were compared to hardcopy laboratory reports. The data validator made sure that RLs were entered into the correct EDD fields.						
24. General Comments: Data were also evaluated using guidance set forth in the <i>United States Environmental Protection Agency (USEPA) contract Laboratory Program (CLP) National Functional Guidelines for Inorganic Superfund Methods Data Review</i> , document number EPA-542-R-20-006, November 2020; method requirements, and laboratory criteria. All data is considered usable.
